## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

UTICA, N. Y. U. S. A.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00 A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00 B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expense. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 8 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5x8 inc s*

FOUR EDITIONS:

D, 240 pages, - - \$1.50  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU  
" Parers, Apple " PA

For Chisels, turn to CH  
" Cutlery, " CUT

For Iron, turn to IRO  
" Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

# HARDWARE

The regular annual meeting of the File Manufacturers' Association was held at the Astor House, New York, June 19th. Elias G. Heller, of Heller & Bros., Newark, president, occupied the chair. After giving the matter serious consideration, it was decided to maintain the present prices on Files for at least the next six months, thus giving the trade the assurance of no radical changes in one important line. At the election which followed, President Heller was re-elected, with H. W. Scattergood as vice president, and Paul E. Heller secretary and treasurer.

T. W. Gathright, formerly secretary of the May & Thomas Hardware Co., of Birmingham, Ala., was added to the staff of E. C. Atkins & Co., June 1st, to act in the capacity of cashier and local agent at their Southeastern branch house at Atlanta, Ga. He succeeds T. F. Barbour, who has held that position since the opening of the branch, but who has now been given a position in the same capacity at their Minneapolis branch house. The company is to be congratulated upon securing a man of such ability as Mr. Gathright for their Atlanta house. He has a host of sincere friends among the Hardware trade in the South whose well wishes will freely accompany him to his new position. The general sales manager of their Atlanta house is Frank X. Ohlen, who for some years was at the head of the Southern Saw Works and later at the head of the Atlanta Saw and Supply Co. Mr. Ohlen has a large acquaintance in the South, particularly among the saw milling industries. Mr. Gathright in going to Atlanta will assist Mr. Ohlen in increasing the sales of the business as far as time will permit in connection with his special duties.

D. Le Roy Dresser, who was recently elected president of the Merchants' Association of New York, may be safely claimed as a member of the Hardware industry, being a director in a number of corporations, among which are the Benedict & Burnham Mfg. Co., Holmes, Booth & Haydens, American Brass Co., American Pin Co., and Waterbury Watch Co.

At the regular meeting of the board of governors of the Hardware Club of New York, June 17th, one member was elected from the waiting list, which filled the active membership to its constitutional limit of 600. John Sargent, of Sargent & Co., New York, was the lucky man, and the remainder of the waiting list will now have to wait their turn until some vacancy is created by which they may enter.

Teague, Barnett & Co., who for twenty-five years have been in the Hardware business in Montgomery, Ala., have sold out. They will be succeeded by a new firm under the style of G. W. Barnett & Son. G. W. Barnett, who has been connected with the old house for twenty-five years, and W. R. Barnett, who has been identified with the business for the past ten years, form the organization. Possessing a thorough knowledge of the wholesale Hardware business from this long and active experience, the success of the new firm is already established. They intend carrying the usual large and well-assorted stock necessary for the transaction of an up-to-date business, and solicit the continued favors of their old friends, with the assurance that all mail orders especially received from them will receive the personal attention of the members of the firm in order that every satisfaction possible may be safely guaranteed.

GOODELL Co., Antrim, N. H., have recently published a Miniature Catalogue of 72 pages, of a size that may be mailed in an ordinary envelope, which is reduced from their large catalogue so that each page shows all the various styles of Table Cutlery, Silver-Plated Knives and Forks, Carvers and Steels; in all their numerous styles, Butcher, Skinning, Boning and Bread Knives. Included in the contents are Butter and Cheese Knives, Putty and Cigar Knives, Scraping, Kitchen and Shoe Knives, making it a very desirable catalogue, and deserves a wide distribution.

Julian W. Perkins has resigned the office of assistant secretary of E. C. Atkins & Co., Saw manufacturers, of Indianapolis, Ind. Mr. Perkins was a director and also a stockholder in this company, with which he had been associated for the past twelve years, having had charge of the division of the business devoted to the jobbing Hardware trade. He is consequently well known to the wholesale trade, among whom he counts many personal friends, having won the reputation of being a very successful salesman. Mr. Perkins has made no new connection as yet, but is considering several propositions.

The Admiral Bicycle Lamp Co., formerly located at Columbus, O., have removed to their new factory at Marysville, O. They were compelled to largely increase their facilities because of the success which the Admiral Combination Lamp achieved during the past year. The plant that they are now moving into is much more commodious, and, being especially adapted to the class of work undertaken by this company, they believe will place them among the foremost manufacturers of this line, soliciting the orders of the Hardware trade. There is no doubt but what the orders for their production will hereafter receive prompt shipment.

The wire nail mill of the Hartman Mfg. Co., at Ellwood City, Pa., is now successfully in operation, and it is believed that by August 1st the mill will be turning out upwards of 4,000 kegs of wire nails per day, and this in addition to the production of their other wire specialties. It is stated that they have increased their surplus account to \$250,000, so that now the surplus capital amounts to \$500,000. Their order books are full of contracts sufficient to keep the mills running to January 1st next. The works are now running night and day in order to fill this accumulation of orders. In their exhibit, which is located in the Agricultural Building at the Pan American Exhibition, they have a full line of their goods displayed, which makes a remarkable showing.

J. Stevens Arms and Tool Co., Chicopee Falls, Mass., have added to other specialties manufactured by them a full line of high-grade Golf Clubs, which it is their intention to market at popular prices that will largely extend the sale of them. They are also placing on the market a full line of Rifle-Cleaning Rods, which they are prepared to furnish, from the ordinary plain slotted variety to the fancy jointed, having cocobolo swivel handles. Quantity orders for these goods from the wholesale trade will receive prices that cannot help but be attractive.

Chas. Kaase, Hardware, Bartlett, Tex., is adding a few of the Warren Patent Hardware Cabinets to his store fixtures for a better exhibit of his goods.

# HARDWARE

VOL. XXIII.

JUNE 25, 1901.

NO. 6

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in** should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

**HARDWARE PUBLISHING CO.,**

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

There is a lessened demand for the supply of goods from jobbers and manufacturers as the season approaches a finality. Vacations are being carefully considered, and the natural desire on the part of employer and employed is to know a couple of weeks of indifference to mental activity or physical exertion, while tired nature realizes a sense of recuperation. Compulsory strikes have given over a month's idleness to workers in several fields of labor, and but little of positive benefit has been accomplished by the sacrifice of time and money.

Manufacturers gladly avail themselves of this easy time in the year to overhaul their plants, supply needed facilities for greater production, discard worn out appliances that retard production by their shortcomings, and prepare for successful competition by augmenting their productive capacity.

Prices as far as heard from are still well sustained with no noticeable changes possessing trade importance. In this lull in the pressure of business, but few stock orders are more than contemplated, it being deemed time enough by July 15th to entertain propositions not already counted among closed incidents. The few demands for the factories to entertain are for special midsummer requirements to close the season satisfactorily.

The outlook for Fall trade continues excellent. Crops promise to be large in every direction. Credit among consumers is on a better and safer basis than for years. Savings banks are showing largely increased deposits, for habits of frugality and of prudent economy limit the general extravagance formerly so prevalent when founded on

future possibilities instead of current facts. Aggregations of capital in large plants have made steadier quotations possible, and the trade generally admit this fact, and appreciate its effect. The abundance of work on every hand is so noticeable, the idler is looked upon as a shirker and unworthy of sympathy, reducing the humanitarian interest taken in tramps and mendicants generally. Prosperity everywhere apparent, money in abundance, there doesn't seem to be a cloud upon the horizon to indicate any change in present conditions for many months to come.

Certain lines of goods have seemingly been held in scant supply, and thus while making less anxiety as to quotations possible, has made orders more freely given; as a short market for supply checks the fear of loss on present deliveries, and creates a natural fear for loss of profits through lack of a supply of merchandise to fill orders. The wise jobber watches his stocks and keeps up an average amount of such seasonable goods as must of necessity be needed by the consumer before season closes. The house that is continually short of stock will soon become short of purchasers, as disappointing delays in shipment create grievances that point a moral of their own.

Manufacturers outside of combinations think they see chances to catch trade by running between the legs of the industrial giants and offering slight concessions. It would seem that when this state of affairs acquired a noted momentum a very decided squeeze would occur, by which "guaranteed prices" at a very low figure would be trust policy. Remember the wire production earthquake, when a drop equal to four profits made a shake-up among some outside concerns that cried a halt successfully, and lessened the season's profits to those staple lines to the jobber in a manner still memorable.

The trade regard prices on shovels as phenomenally high by comparison with what are regarded as "old prices" of a couple of years ago; and no doubt it would be the part of wisdom with the Shovel Trust to do the square thing by the trade, and modify prices by making concessions that would certainly work for good and stifle adverse criticism. Such large combinations could take a lesson from the American Axe and Tool Co., whose quotations for grades of goods needed are based intelligently on cost of production, as far as bulk of sales is concerned; while the brands which have established a reputation and have always been quoted above ordinary stocks, still find sales at advanced prices that are undoubtedly more remunerative.

This has been an excellent year for sales of Shelf Hardware. The purchases of mechanics' tools, of the higher grades as well as those more moderate in price in all the large cities, have been largely in excess of the early anticipations of the dealers. The deliveries by manufacturers have in rare cases only, been sufficient to leave much surplus stock, and supplementary orders under urgent conditions have done little more than supply current wants.

It is gratifying to note the present demand for Builders' Hardware, as indications point to the fact that all through the country a greater interest than ever is taken in building operations which will keep this industry full of orders during the entire Fall season, the prices on this important branch of the industry being sufficiently encouraging to stimulate purchases.

Taking the indications throughout the trade that are unmistakably definite, it would seem as though we were on

the threshold of a season's demands, in which prosperous conditions will prevail, and early orders and prompt deliveries would be the most desirable requirements for a successful trade all around.

### Our Exports Reach a Record Point.

Exports from the United States in the fiscal year 1901, now about to end, will probably reach \$1,500,000,000, the highest point ever recorded for a single year in the history of our export trade. For the eleven months ending with May, 1901, the total exports were \$1,385,013,595, being double those of the corresponding period of 1889, and \$100,000,000 in excess of the total for the eleven months of last year, which broke all previous records. Taking the commerce of the eleven months ending with May of various years as the basis of comparison, the figures of the Treasury Bureau of Statistics show that during the period under review our exports in 1889 amounted to \$694,133,804; in 1894, to \$834,636,085; in 1899, to \$1,130,629,075; in 1900, to \$1,285,831,125, and in the present year, as already stated, \$1,385,013,595; while for the full fiscal year our total exports give promise of exceeding one and a half billion dollars, as the eleven months' figures only fall \$115,000,000 short of that amount, and the monthly exportation of merchandise from the United States has exceeded \$120,000,000 since March 1 of this year.

The distribution of our exports during the year among the grand divisions, basing the estimate upon the percentages for ten months already available, will be in about the following proportions: To Europe, \$1,155,000,000, as against \$1,040,000,000 last year; to North America, \$195,000,000, as against \$187,300,000 last year; to South America, \$44,000,000, as compared with \$38,900,000 in 1900; to Asia, \$48,000,000, as against nearly \$65,000,000 in 1900; to Oceania, \$36,000,000, as against \$43,400,000 last year; and to Africa, \$26,000,000, as against \$19,500,000 in the preceding year. It will be observed that the only decreases will be in our exports to Asia, where unsettled conditions in China have seriously affected trade, and to Oceania, from which Hawaii has been omitted as a foreign country since its organization as a territory of the United States.

To products of agriculture is due the credit for the greater portion of the increase in our exports during the present year. In the ten months for which detailed figures are available, products of agriculture were valued at \$811,591,955, and formed 65.53 per cent. of the total domestic exports; last year they amounted to \$717,372,746, and formed but 62.21 per cent. of the total domestic exports. For the same period of this year manufacturers aggregated \$339,310,614 and formed 27.40 per cent. of the domestic exports, while last year they were \$352,671,206, and formed 30.60 per cent. of the value of domestic exports. The exports of agricultural products for the full fiscal year will be about \$965,000,000 as against \$835,858,123 last year, while those of manufactures will be about \$405,000,000, as compared with \$433,851,756 last year. This decrease in the exportation of manufactures is due chiefly to the following causes: 1. The war in China, to which country our exports consisted largely of manufactured articles and to which market alone our sales in ten months decreased from \$13,474,703 in 1900 to \$7,706,138 in the present year; 2. The transfer of Hawaii from the list of foreign countries to classification as a customs district of the United States, necessitating the omission from our exports of all goods passing between that island and the United States and thus decreasing by approximately \$15,000,000 our exports for the year; and, 3. The omission for similar reasons of merchandise passing between the United States and Porto Rico, to which island we sent in the ten months of the present year merchandise valued at \$5,611,583, of which sum manufacturers formed an important part, cotton goods alone representing over a million dollars.

The following table shows the exports from the United States in the eleven months ending with May in each year since 1889:

1889 ....	\$694,133,804	1896 ....	\$815,901,067
1890 ....	804,717,334	1897 ....	977,800,522
1891 ....	826,886,076	1898 ....	1,136,503,607
1892 ....	965,389,311	1899 ....	1,130,629,075
1893 ....	782,218,625	1900 ....	1,285,831,125
1894 ....	834,636,085	1901 ....	1,385,013,595
1895 ....	752,570,335		

### PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

#### Patents Expired June 10th, 1901.

- 299,960. VENTILATOR FOR WINDOW-SASHES, Edward Wells Chadwick, Edgartown, Mass.
- 299,962. WRENCH, John Combs, Rushville, Ohio, assignor of one-half to Charles A. Thomas, same place.
- 299,980. IRON FENCE, Marselius Hegborn, Chicago, Ill.
- 300,006. COMBINED ICE-CREEPER AND HEEL-PLATE, Edward N. Porter, Burlington, Vt., assignor of two-thirds to Lorenzo G. Burnham and Jonas G. Reed, both of same place.
- 300,011. LIFTING-JACK, John Ritchie & Friedrich Luckermann, Freeport, Ill.
- 300,023, 300,024, 300,025. MANUFACTURE OF ANTI-FRICTION BEARINGS, William W. Smalley, Boundbrook, N. J. (Administrator of John Smalley, deceased), assignor to the Graphite Lubricating Company, Jersey City, N. J.
- 300,077. HEADED SLUG-NAIL, John Hyslop, Jr., Abington, Mass.
- 300,104. SASH-BALANCE, John Bartlett Montague, James Thomas Booker and Enoch Cass Dinnings, Franklin, Ky.
- 300,317. BIT FOR INSERTING SCREW EYES, Chas. E. Griffith, Storm Lake, Iowa.

#### PATENTS ISSUED JUNE 11, 1901.

- 675,922. DEVICE FOR CLAMPING AND HOLDING WIRES, G. F. Beals, Irondale, Mo.
- 675,926. TACKING TOOL, John C. Blott, Prospect, Wis.
- 676,026. HAND-VISE, Clarence V. Burch, Terre Haute, Ind.
- 676,330. SPIRIT-LEVEL, Jacob Lemle, Toledo, Ohio.
- 676,363. CONVERTIBLE DEVICE FOR RIVETING AND SAWSETTING, C. F. Haldeman, Salem, Ohio, assignor to the Sheehan Mfg. Co., same place.

#### TRADE MARKS.

- 36,585. CERTAIN NAMED EDGED-TOOLS, David Wadsworth & Son, Auburn, N. Y., the words "Big Chief" and the representation of the head of an Indian.

#### PATENTS EXPIRED JUNE 17, 1901.

- 300,345. LAWN-MOWER, Chas. Warren Cheney, Athol, Mass.
- 300,355. HOSE-REEL, H. L. Gardner, Springfield, Mass., assignor to David S. Loomis, same place.
- 300,356. KNIFE AND FORK, J. W. Gardner, Shelburne, Mass.
- 300,387. KEY-FASTENER, Robt. T. Miller, Covington, Ky.
- 300,391. CORKSCREW, J. K. P. Nourse, West Medway, Mass.
- 300,396. CARPET-STRETCHER, Emmet Patterson Poindexter, Woburn, Ill.
- 300,474. DOOR-HANGER, Warren Ide, Medina, N. Y.
- 300,507. LAWN-MARKER, Robert B. Reynolds, Stockport, N. Y.

#### PATENTS ISSUED JUNE 18, 1901.

- 676,573. TOOL-HOLDER, G. W. Bowers, Waltham, Mass.
- 676,603. LID FOR COOKING UTENSILS, A. H. Drake, Union, Ore.
- 676,609. BAKING-PAN, Isabella H. Jones, Salisbury, Md.
- 676,623. AUTOMATIC ANIMAL-TRAP, J. F. Hand, Des Moines, Iowa.
- 676,726. CAN-OPENER, William H. Plumb, Ansonia, Conn.
- 676,776. STOVE-BOARD, L. H. Solosth, Grand Rapids, Mich., assignor of one-half to Frank H. Mathison, same place.
- 676,789. CAN-OPENER, Charles W. Weir, Wilmerding, Pa.
- 676,823. LOCK, Josef Paur, Milwaukee, Wis.
- 676,832. PROCESS OF MAKING EDGED TOOLS, C. D. Ziegler, Lewistown, Pa.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

## Difference Between Deed and Will Transfer Tax.

**QUESTION:** Can a person possessing real and personal property execute a deed, bill of sale or assignment of his property to members of his family or others reserving a life interest therein and absolute control of same until his decease; at which time the transfers are to become operative and of full force, thus rendering the making of a will unnecessary. If such transfers could be legally made, could there be any inheritance tax collected from the estate?

**REPLY:** A person possessing real and personal property may execute a deed of his real property or a bill of sale of his personal property, which shall take effect at a certain time. He may execute a deed of trust by which the payment of the income of the property may be paid to him during life and upon his decease the proceeds distributed according to the terms of the deed or trust. If this were done as to this property it would be unnecessary for this grantor to make a will. It must, however, be understood that if a deed of this character is executed and delivered, it is thereafter irrevocable by the grantor. A will on the contrary speaks and operates only from the time of death and is revocable at the pleasure of the testator at any time before death. If such a deed of trust as suggested were executed by a person, and it was intended that the enjoyment and possession of the property should take effect after his death, the property would still be subject to the transfer tax, provided that the estate was such as to be subject to the transfer tax if a will had been made or if the deceased had died intestate.

It was decided in the matter of Green, 153 New York, page 223 by the Court of Appeals of this State that a person could not avoid the provisions of the Transfer Tax Law by making a deed in contemplation of death, which was intended to take effect in possession or enjoyment at the time or after such death. We are of the opinion that it is generally the best course for a person desiring to dispose of his property in a certain way, to make and properly execute a will which will carry out his intention. It is possible in certain instances where the will is properly drawn, to avoid the transfer tax.

## Proper Execution of Contract.

**QUESTION:** I am about to enter into a contract with a man and should like to know whether any acknowledgment of the contract is necessary to make the contract valid. If any particular form of acknowledgment is used in New York, kindly inform me where I can get such a form.

**REPLY:** No acknowledgment before a notary public is necessary to make a contract valid. The acknowledgment of a contract before a notary public has nothing to do with the validity of the contract itself. Its purpose is to entitle the contract or other instrument to be read in evidence or recorded in a public office without other proof than signatures of the parties. This oftentimes is extremely important, and it often occurs that a person trying to prove the signature of a party to a contract which is not acknowledged will find it difficult in the extreme, if not impossible. If the signature in dispute is acknowledged before a duly authorized notary public, the contract only need be offered, without further proof. It will, therefore, be seen that, although an acknowledgment is in no way necessary to the validity of the instrument, nevertheless every contract should be acknowledged or witnessed for the purpose of proving the signatures should they be disputed. The form of an individual acknowledgment in use in this State is as follows: "State of New York, County of \_\_\_\_\_, ss: On this day of July, 1900, before me personally came John Doe, to me known and known to me to be the individual described in

and who executed the foregoing instrument, and he thereupon duly acknowledged to me that he executed the same."

## Barney &amp; Berry's Rapid-Fire Battery.

E. H. Barney, of the firm of Barney & Berry, Springfield, Mass., has just perfected and is now placing on the market a new invention that will be known as Barney & Berry's Rapid-Fire Battery, which, as the catalogue states, "is designed for all saluting purposes, afloat and ashore, where superiority is recognized and the first cost is not the only consideration." The invention is unique, as it allows rapid firing, the mechanism is simple and not easily disarranged, and there is no danger from premature explosions. The battery as now manufactured for market, is arranged in a brace of three small cannon, but if so desired single cannon can be mounted on carriages, although that pattern is not contemplated at present. The locking device and firing mechanism is so arranged that by moving the small lever, seen below the breech of the battery in the cut, it can be shifted easily to one side. The shells may then be introduced and reversing the lever closes the cannon barrel and puts it in readiness for firing. It is then only necessary to pull the string which brings over a lever attached by a ratchet to a rod extending over the top of the battery. On this rod are small cams so

arranged that only the first gun can be fired at the first pull. A spring then carries the ratchet lever back, and a second pull fires the second gun. The action repeated discharges the third cannon. The triggers are the curved attachment at the breech, and they are fitted with springs which give a rebound, thus lessening the blow upon the cartridge, but insuring sure action.

The new cannon battery is a fine sample of metal-working. All the parts are of brass, highly burnished, and each connection and joint is made to fit perfectly. The battery is mounted on a fine mahogany carriage thoroughly reinforced with brass rods holding every joint and running from side to side of the carriage, the ends being held by highly burnished caps. A large brass bar extends through the back part of the carriage, affording a place for grasping the carriage to remove it from place to place. Instead of the wooden axles and small wooden wheels commonly found on such machines, Mr. Barney has introduced metal axles and bearings, with bronze wheels fitted with rubber tires. The common bore for such cannon is a No. 4, or barrels one inch in diameter. The retail price for this size of battery will be \$100, which is considered low for the style of machine. Mr. Barney has applied for a number of patents covering his inventions on the new machine.

Germany is rapidly rising in importance as a money-lending as well as a money-making nation. It has hundreds of millions in various parts of the globe. In North Africa Germany has invested nearly \$3,000,000.

### Michigan Retail Hardware Dealers' Association.

The Executive Committee of the Michigan Retail Hardware Dealers' Association met at the Hotel Cadillac, Detroit, on the 12th inst., with the following members present: H. C. Minnie, vice-president, Eaton Rapids; Henry C. Weber, treasurer, and Fred. H. Cozzens, secretary, of Detroit; C. E. Pipp, Otsego; A. J. Scott, Marine City; A. Harshaw, Delray; Robt. G. Chandler, Coldwater, and John Popp, Saginaw, members of the Executive Committee. In the absence of George W. Hubbard, Flint, president, who was unable to be present, Vice-President Minnie occupied the chair and called the meeting to order.

The secretary's financial report showed receipts since the last convention, \$979.62; disbursements, \$662.12; balance in bank, \$317.50. Twenty-six new members have been taken in since the last convention, and it is expected that between 50 and 100 more will join at the next meeting.

After a general discussion of the matters before the body, the secretary was instructed to arrange a programme with the following speakers: W. P. Lewis, New Albany, Ind., president of the National Retail Hardware Dealers' Association, on the subject of "National Association Work;" R. G. Chandler, Coldwater, Mich., on "The Best Methods of Running a Hardware Store;" H. C. Weber, Detroit, on "Store Window Dressing and Keeping Stock in Good Shape." "The Collection of Accounts" will be handled by Mr. Cleland, attorney of the Commercial Credit Co., Detroit.

It is planned to hold the second day's session at Rushmere Club at the Flats, the party leaving Detroit on the fast steamer "Tashmoo" at 9 o'clock in the morning, reaching the Rushmere Club at noon, holding the afternoon session there, and returning in the evening and reaching Detroit about 9 o'clock. It was thought that this would provide recreation and at the same time give ample opportunity for the transaction of unfinished business from Wednesday's afternoon session. The first session of the convention will be at the Hotel Cadillac, where the headquarters of the convention will be, on Wednesday, August 14. This meeting will continue as late as necessary in the afternoon, and it will be planned to dispose of all other business at the afternoon session at the Flats. It is possible that a session may be held on the "Tashmoo" in the morning going up, if it is found necessary.

A number of practical discussions on the advantages of association work and on the National Association will come up in the Question Box topics, so that every dealer who comes may be assured of a helpful, dollar-bringing meeting, and at the same time be assured of sufficient entertainment in the shape of boat rides, etc., to make it desirable to come and bring his wife and children.

An unusually large attendance is anticipated, as the meeting was postponed from July until August on purpose to meet the needs of the country dealer, who finds it difficult to get away in July.

### New England Iron and Hardware Association.

The annual meeting of the New England Iron and Hardware Association was held through the courtesy of ex-President Harry L. Doten, at the Exchange Club, Boston, on the evening of June 18th. Previous to the dinner the usual informal reception was held. Dinner being called at 6 o'clock, about fifty members and guests were present and enjoyed the customary excellent repast. At the close of the banquet, President Chamberlain announced that the end of the fiscal year was reached, and called upon Clerk John T. Boyd for his annual report, by the reading of which the members were informed the Association was in an extremely excellent condition. The membership of 100 was completely filled, and the entire capital stock held. The Association being a Massachusetts corporation, with a charter giving it a greater scope than is usually granted to a purely social organization, makes

it necessary in order to increase the membership that the capital stock be increased.

Following Mr. Boyd, the treasurer, C. H. Breck, presented his annual report, giving evidence of a satisfactory balance being in the treasury. Mr. Breck also reported for the Credit Bureau Committee, and this branch of the Association's work was announced to be in a very satisfactory condition. The Collection Department during the past year has handled accounts aggregating \$60,000 and succeeded in collecting a large percentage of this at a very small expense. The Bureau of Credit is divided into three departments, viz.: Collection, Attorneys, and Bankruptcy and Assignment. These departments are under the care of Commissioner E. L. Haley, who was formerly in the wholesale Hardware business in Boston, and is thoroughly familiar with all the details necessary to transact this important business. E. P. Sanderson, chairman of the Membership Committee, reported that during the year thirty-three new members were admitted, bringing the membership up to the standard of 100 active and seven associate members. The Heavy Hardware Committee reported through their chairman, Allan J. Chase. The Shelf Hardware Committee's report was read by the clerk, having been prepared by Wm. Chamberlain. The Metal Trades section presented their report through P. E. Strauss. There were no reports from the Woodenware, Saddlery Hardware and Paints and Oils Committees. After some discussion regarding a proposed increase in the capital stock of the Association in order to provide for new members, this matter was postponed till the September meeting.

The President then called for the report of the Nominating Committee, which recommended the election of the following: Directors, Allan J. Chase, Charles H. Breck, John T. Boyd, Oscar A. Shepard, E. P. Sanderson, Henry A. Robbins, H. W. Waite and James A. Munroe, Charles W. Henderson, Jr. Treasurer, Charles H. Breck; Clerk, John T. Boyd. At a meeting of the directors held subsequently, Allan J. Chase was elected president and Oscar A. Shepard, vice-president. President-elect Chase, on being conducted to the chair, made a brief address to the members present, expressing grateful appreciation of the honor that had been shown him by his election, and referred to the labors, aims and accomplishments of the Association, complimenting the Association upon its progress. The retiring president, William Chamberlain, delivered a brief address to the Association, thanking the members for their support during his administration, and referring with pleasure to the memories that will be his for a long time to come. Mr. Chamberlain, at the close of his address, was given three hearty cheers, after which the meeting adjourned.

### L. S. Starrett Co.

The L. S. Starrett Co., Athol, Mass., have in their employ 280 hands, who were very pleasantly surprised last month by receiving a circular which announced that beginning with June 1st 54 hours, or nine hours a day, would constitute a week's work, instead of 60 hours as formerly, and this change was made without reduction in pay. As there were no demands made upon the company for this careful consideration of the workmen's interests, being entirely voluntary on their part, the workmen to show their appreciation of the consideration of their employers organized a demonstration on the night following the announcement, and, preceded by the Starrett Band, marched to Mr. Starrett's residence, serenaded him in fine shape, at the same time presenting him with a letter signed by all the foremen of the shop, in which document very hearty acknowledgment was made of this generous action on the part of the company. Frank E. Wing, also prominently identified with the business of the company, was made a participant in the demonstration, the employees proceeding to his residence, and were addressed by Mr. Wing on the relations existing between employers and employees, which was very enthusiastically received.

### F. E. Myers & Bro's. Pan American Exhibit.

We present in this article an illustration of the Pan American exhibit of F. E. Myers & Bro., Ashland, O., which presents a very creditable appearance.

Recent letters from F. E. Harris, sales manager for F. E. Myers & Bro., who has charge of their exhibit and that of the Bucher & Gibbs Plow Co., at the Pan American Exposition, are to the effect that it is practically installed and will be found decidedly effectual throughout.

another, with the ten numbers 9 to 0 engraved on each. Addition and subtraction were performed by turning the appropriate wheels by hand, the carrying over being mechanically provided for. The machine was of very little use.

Whenever calculating machines are mentioned, people invariably think of Charles Babbage, who undoubtedly designed by far the most complete machine that has ever been invented. Babbage's machine was designed to calculate elaborate tables and automatically set them up in type, or else

It is located in the Stadium Building, where they make a joint exhibit and where they would be glad to have all their friends and other interested parties call and make themselves known. Their space is in the midst of the agricultural implement department, being close to the main entrance to the arena. Those that call will, beyond doubt, find an agreeable welcome, every effort being made to prompt a disposition on the part of customers and friends to feel at home. New and attractive printed matter will be distributed.

### Calculating Machines.

Calculating machines have been in use for so long, and are used at the present time by so many people, that it would be natural to suppose that everybody would have some sort of acquaintance with them, and some idea of the principles on which they work. Personal experience, however, shows that a calculating machine is nearly always regarded as a novelty, and usually as something exceptionally wonderful.

The first recorded attempt at an arithmetical instrument in Great Britain was made by Napier, the inventor of logarithms, early in the seventeenth century. It consisted simply of a movable multiplication table, somewhat flippanantly called "Napier's bones," in spite of the fact that the inventor christened his system rhabdology. There is much that is good about these "bones," but as a calculating instrument it will not compare for a moment with logarithms, for which we are largely indebted to Napier.

The first real calculating machine was invented by the philosopher Paschal, about 1650. He was then a lad of nineteen, helping his father in work which required much calculation; and he contrived a series of wheels connected with one

supply a mould in which stereotyped plates of the tables could be cast. After many experiments, he constructed his first "difference engine," as he called it, for the reason that he employed the method of differences as a general principle on which to base the calculations. He said that his machine could go on for years working by the same formula. It could then change, without human intervention, to another formula for a single calculation, and subsequently resume working by the original formula.

Since Babbage's day many small calculating machines of various kinds have been invented, of which the most practical and widely used are two. The first of these is an American invention, called the comptometer. This is actuated by keys like those of a typewriter, and by its means it is simple to add, feasible to subtract, multiply and divide. It has the great merits of simplicity of construction and low price. The second of the calculating machines at present in commercial use is the arithmometer, an English invention.—*Iron and Coal Trades Review*.

The advance made in picture making the past few years owes much to the air brush as brought out by L. Walkup, Rockford, Illinois, U. S. A. The part in which it has been adopted to advantage can be seen in most every branch of the fine arts, from finishing sketches, camera work, lithography, monumental, architectural, half tone work and many branches of fancy work, using any liquid coloring, painting on any surface from gelatine to glass, on fabric from satin to velvet. It is plain to be seen how useful it is, as in every case it improves the work in clean soft effects and saves time as well. A better picture is made and in less time.

## HINTS TO HARDWARE DEALERS

### IN SHOWING UP AND RETAILING SEWING MACHINES.

This subject is one of great importance to the Hardware dealer and other beginners in the Sewing Machine business. And yet very few companies or representatives take the pains or time to instruct their dealers how to show a Sewing Machine properly.

If properly handled Sewing Machines will prove profitable to any Hardware dealer. That here and there is a Hardware dealer who says: "Handling Sewing Machines don't pay; I've tried them," proves nothing but that his method was faulty. Merely putting sample machines on your floor may do some good and bring some business, but there's a far better way. Find some point about your machine on which you excel and harp on that. The Hardware dealer who supplies the most pertinent information about the machine he handles will get the most trade, other things being equal. If the price of his machine is low; Why? If the quality is excellent; Why?

I would suggest to the Hardware dealer on receiving the machine to be careful in taking it out of the crate to avoid scratching or bruising the wood-work. I would thoroughly acquaint myself with the mechanism of the machine and all its working parts. I would run the machine a few minutes and see that the belt is neither too tight nor too loose. Then oil it up and see that no nuts or screws are loose and that the band wheel is plumb.

In order to see that the tension and stitch of machine are perfect, I would put in a needle to carry a No. 40 thread and sew from one thickness of muslin to ten and go back to one again, until I was satisfied it was right. Then I am ready to show any work that can be done on the machine. In showing a machine to a customer in the store, make her feel at home, if possible. First present to view the face side of the cabinet work and, while removing the cover, call attention to such points in the cabinet work as may appear desirable features, such as beauty of finish, arrangement of drawers, etc. In operating the machine and while stitching back and forth, proceed to explain thoroughly, but with as few words as possible, every desirable feature of the machine. In regard to attachments, I would dwell principally on the completeness of the set, and after spreading them out where they can be seen and counted, pass them by with a few well chosen words.

In showing up, keep the customer's attention on the machine. Avoid outside talk. Invite her to sit down and try the machine. Show the customer how to thread the machine and help her to get started. Avoid arguments as to the relative merits of other machines and undertake nothing in showing up that you have not mastered previously. Dwell on the merits and commendable features of your machine. People like to know how and where things are made. Not a technical description, but a hint here and there. Remember the paramount object is to make sales, therefore the best plan is to find the easiest way to show up a machine with the least time and attention consumed and yet make sales.

There are many different ways to retail a sewing machine, any one of which if followed up industriously will make sales provided you select the one suited to the conditions with which you are surrounded and the idiosyncrasies of your customers. Do your best to get into their good graces; learn to adapt yourself to circumstances and the sale is half made.

In selecting a machine to handle, choose one that you have the utmost confidence in, one that you know is first-class in every particular and that you can honestly recommend in every way to your customers. By all means handle only a good machine, because by having a high appreciation of the

machine you are selling, you are more enthusiastic and can speak in more positive terms of its many fine qualities, durability, etc.

Now, as to the manner of making a sale, let the same spirit prevail as in showing up. Use all your persuasive powers to make the customer desire the machine. Inspire her with its best features, the nice work she can do on it, its good qualities, the durability of the machine, the convenience and completeness of the attachments. By proper tact you can get some expression from your customer as to the particular feature she desires in a machine. Then harp strongly on that feature and the sale is certain. Nearly all standard machines have their good points in common, the essential features differing but little. Yet no two customers can be handled in the same manner. Some ladies don't care a Continental for the machine, but make a hobby of a certain kind of machine work; others again have mechanical preferences and pay little attention to the product of the machine. By a careful study of their likes and dislikes you will be able to discover their preference in this regard and by carefully developing this interest you create a desire for your machine.

In regard to installment business, the extra amount charged on time sales is generally enough to make them profitable, where customers will pay promptly, and in addition will largely widen the dealer's field of operation, for while few customers are able to pay cash or give a good note most anyone can buy and pay for a machine on installments. Many profitable sales are made on time by making the customer feel you are doing them a favor by offering them so useful an article on easy terms of payment. In selling on time get as much cash down as possible and have a stipulated amount and certain time of payment each month.

The trial business may be used in extreme cases, but I would do as little of it as possible. From my experience, the longer a machine is left on trial the less chance there is of selling it. Either the machine will get out of order and discourage the customer or some competitor will come along and while the interest aroused in his machine by a good showing up is still warm, close the sale. When you have shown up your machine thoroughly and your customer has become interested in it, then is the time to close the sale, if possible, either by all cash or a partial payment with the privilege that if the machine is not satisfactory after a sufficient trial it can be returned and another machine supplied or money refunded. In this way many sales may be effected immediately that might otherwise hang fire and never materialize.

It is continuous effort that pays in selling sewing machines as in everything else. Sporadic effort means waste every time. If the dealer has confidence in the machine he sells and talks it up in that spirit and manner that is the impression people will get. The first few machines sold serve only as a foundation, and aid to introduce the machine to your customers, and if a good machine, it gains trade and friends for you. The way to stir up trade is to take some article like sewing machines that there is a demand for and push it continuously. If your machine is better than the one handled by your competitor, give a good honest reason for it. The stronger you can be in your argument the better people will like it. Not only be honest but let the machine show and prove that you are. People, and especially women, like to know the how and why of everything nowadays. Maybe the first sales will be very slow in coming, but they will come just the same and there is no other line in which a Hardware dealer can invest money where it will bring better profit or satisfaction than in a line of good family sewing machines.

### Osgood Scale Co.'s Plant.

It is with pleasure that we submit to our readers a cut of the factory of the Osgood Scale Company, of Binghamton, N. Y. This company began business in 1865, in a very small way. The factory has been added to and enlarged at different times, and the capacity greatly increased, until to-day it

turning out twenty-eight different sized platforms in wagon scales, both in the wood and the iron levers. These they are furnishing both in the double and their well-known triple or combination beam, requiring no loose weights. Another very popular line is the Osgood medium grade line of portable scales, for the agricultural trade. The farmers of this country are demanding more and more a thoroughly reliable

is one of the largest scale manufacturing plants in the country. This company has always had the reputation of turning out thoroughly first-class goods, being made by practical scale makers who have been in the scale business between 40 and 50

years. By aggressive advertising in the best trade and agricultural papers in this country, and through faithful, persistent work on the part of their traveling men, the capacity of

this factory is to-day taxed to its utmost to supply the demand for Osgood scales. This company has won a world-wide reputation for their Osgood combination wagon scales, which they are turning out in larger numbers every year. They are now

scale at a medium price, and the Osgood people have supplied this want. The Osgood line is to-day one of the very best on the market. Thousands of inquiries are taken care of every year, and the list is growing steadily in extent. This company send out very attractive printed matter and a fine hanger, and interested dealers can obtain same by addressing the manufacturers.

### Computing Machines.

A striking tribute to their value by a United States Government official.

Owing to the great amount of statistical work involved in the preparation of the various tables used in the publication of the Department of Agriculture two computing machines were recently installed in that branch of the United States Government and have since been put to a very severe and continuous test. As to the result we quote from the last annual report of the Chief of the Section of Foreign Markets:

"The statistical work required during the year in order to supply the information requested, and especially that involved in the preparation of the numerous tables used in the publications issued, called for a large amount of computing. Through the utilization to the greatest possible extent of the modern calculating machines, with which the office is now fully equipped, the necessary computations were performed with much greater facility than in the past. For several years the section has been making a careful investigation into the relative merits of the various computing machines on the market, and after a thorough trial of the most approved types, two styles have been adopted as meeting most satisfactorily the needs of the office. One style of machine is used exclusively for adding and the other for all work in division and multiplication. The two kinds of machines adopted are employed together to excellent advantage, the work of one supplementing that of the other. Several machines of each style have been purchased, and now practically the entire task of computing, which plays such an important part in the operations of the section, is done by mechanical means. Experience has shown, as regards either style of machine, that the average clerk can do fully three times as much work in computing with the aid of the mechanism as without it. There is also a decided gain in accuracy. In fact, the advantages of machine computing are so clearly manifest that there seems to be little excuse for clinging to the old method. Although the machines purchased by the section were rather expensive, the sum paid for them has already been more than balanced by the gain they have caused in the working efficiency of the office."

### Scientific Exhibit.

New York State's mineral resources exploited. An interesting display at the Pan American Exposition, by the New York State Museum. The Scientific Exhibit of New York State at the Pan American Exposition which was prepared by the New York State Museum is a representative exhibit of the mineral resources of the state. The principal portion of the exhibit is devoted to the iron, cement, salt, gypsum, building stone and clay products. The building stone are shown as cubes, dressed to the uniform size of ten inches. These cubes show the principal styles of stone dressing. The front face is polished, while the top is usually left rock face. Tooth chiseling, fine and coarse pointing and patent hammering are shown on other faces.

Among the specimens shown are granites from Westchester, Essex and St. Lawrence counties; sandstones from Clinton, Washington and Orleans counties; bluestones from Ulster, Delaware, Chenango and Wyoming counties; limestone and marble from Westchester, St. Lawrence, Onondaga, Seneca and Niagara counties. Bluestone is also shown in the form of flagstones, 1 foot by 2 feet in diameter. Roofing slate from Washington county is shown in the usual sizes used in building.

The iron ores of New York which represent nearly every known ore of iron, are shown in three large glass cases.

Among the most interesting specimens are some large magnetite cleavages from Mineville, together with several hundred octahedral crystals from the same place.

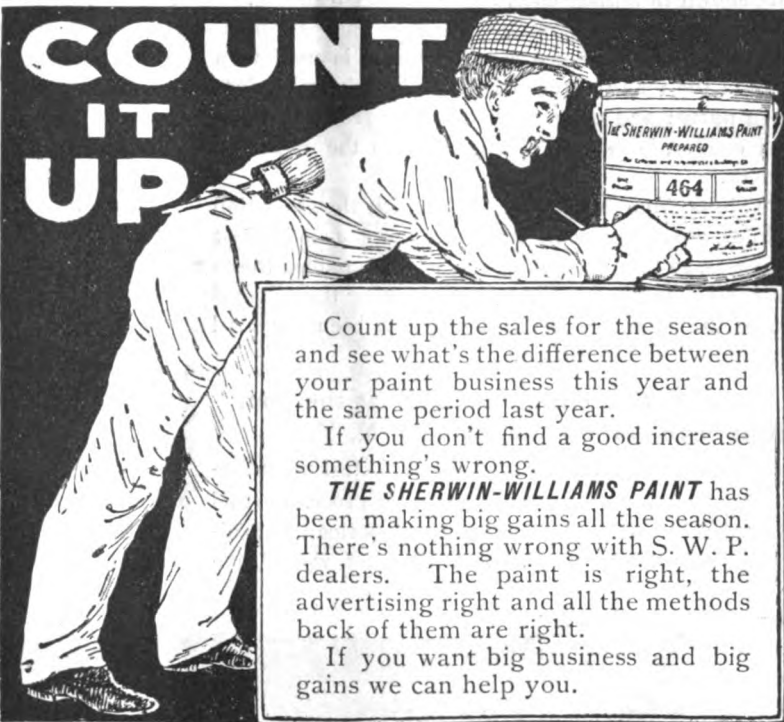

The Limonites from Columbia and Dutchess counties are well represented, together with the carbonate ore from Burden, the Clinton hematite and the hematite from St. Lawrence county. This collection is interesting, not only in showing the mines, now in operation, but of historic interest as well, inasmuch as many of the mines not now in operation are represented by specimens, thus forming a comprehensive exhibit of the State's resources in iron.

The clay exhibit is intended, not only to show the different qualities of clay and kaolin, found in this State, but also the products made from this material. Clay from thirty representative localities of the State is shown in connection with the manufactured products. In this exhibit are also included the shales of New York that are used in the manufacture of brick and terra cotta. Among the many products which are exhibited may be mentioned common brick, vitrified paving brick, sewer pipe, fireproofing material and acid proof brick.

The lime and cement industries are represented in two large cases, five feet square. In this exhibit not only is the crude rock shown, but samples of the finished product are displayed in quart bottles. Here are found lime, natural cement from Ulster, Onondaga and Erie counties, and Portland cement from Greene, Schoharie, Onondaga and Steuben counties. Among the material used in the manufacture of these cements may be mentioned limestone marl, clay and shale.

The salt industry of the state is represented by specimens from the principal producing localities and composed of quart samples of salt, evaporated by every method used in the manufacture of salt. In addition, specimens of rock salt of the different grades used are shown. The localities represented

# COUNT IT UP

Count up the sales for the season and see what's the difference between your paint business this year and the same period last year.

If you don't find a good increase something's wrong.

**THE SHERWIN-WILLIAMS PAINT** has been making big gains all the season. There's nothing wrong with S. W. P. dealers. The paint is right, the advertising right and all the methods back of them are right.

If you want big business and big gains we can help you.

## THE SHERWIN-WILLIAMS CO.

PAINT AND VARNISH MAKERS.

CHICAGO,

TORONTO,
SAN FRANCISCO,  
KANSAS CITY,

Write 31 Michigan Street, Cleveland for the "B-13" illustrated booklet on our Paints and Methods.

are Syracuse, Warsaw, Gifford, Retsof and Livonia.

The gypsum exhibit is particularly interesting, as showing for the first time the use of New York State gypsum in the manufacture of wall plaster. During the past five years this industry has been developed in New York, until now there are five companies actively engaged in the manufacture of plaster-of-paris and wall plaster from New York gypsum; and a sixth company has purchased a quarry and anticipates using this material during the coming year. Until about 1895 New York State gypsum was used only for land plaster. A more striking exhibit of the New York gypsum may be seen in some of the buildings on the Pan American Exposition. Grounds, in which large quantities of this material are used. Land plaster from various localities are also shown, together with many beautiful specimens of the gypsum rock.

Among the abrasive materials shown, are mill stones from Ulster county, which are manufactured from the Oneida conglomerate; tripoli from Wilmurt, Herkimer county, and garnet from the Adirondacks.

Several manufacturers of sand-paper have furnished an interesting series of different grades of garnet paper, which are used in the manufacture of shoes and in wood working. A large piece of corundum emery from Peekskill is also included in the exhibit.

The oil fields of New York state are represented by fifty specimens, obtained from Steuben, Allegany and Cattaraugus counties, representing all the known oil fields of the State.

One exhibit of peculiar interest is that of the mineral paints. The mineral paints of New York are manufactured from materials coming from six sources; the pre-Cambrian graphite of Ticonderoga; the Cambrian and Ordovician slates of Washington county; the Devonian shales of Delaware and Chautauqua counties; the Rossie iron ores and the Clinton iron ores. A small quantity also is made from the talc of Edwards and Fowler, St. Lawrence county. Samples

of all these materials, showing both the ore and the finished product, are shown in a glass case,  $2\frac{1}{2}$  inches by 5 inches.

Among the miscellaneous minerals shown may be mentioned talc, from St. Lawrence county, which is used to a great extent in the manufacture of paper, in mineral paints and in stove putty; and quartz and feldspar from Bedford, Westchester county, both of which are used in the manufacture of pottery.

All the exhibits from New York State, with the exception of the building stones and clay products, are shown in dust proof glass cases, so that the last visitor will be enabled to see as good an exhibit as the first. A chart, showing the mineral production of the State for the past year has been prepared for distribution at the Exposition.

### E. C. Atkins & Co., Grand Exhibit at the Pan American Exposition, Buffalo, N. Y.

This large and enterprising firm of saw and steel manufacturers, whose policy is to always be ahead of the procession and never lagging behind, decided that the Pan American Exposition which opened at Buffalo, N. Y., on May 1st, would give

and butcher saws, corn, cane, beet and hominy knives, etc. There is also another square pyramid which shows a large number of planing machine knives of all descriptions.

The other end of the space contains a show case in which are kept a full line of saw tools and a rack adjoining holds twelve cross-cut saws varying in length from four to nine feet. The balance of the space is used as an office where may be found all the trade journals, together with writing materials, etc., for the use of the friends and patrons of the company.

One of the features of the exhibit is the railing, which is made of a fourteen inch double edge band saw mounted on oak posts. An arrangement of electric lights and a heavy carpet completes the installations, making an exceedingly rich and attractive display.

The credit is due Edward S. Taylor for the design and erection of this exhibit. Mr. Taylor had charge of the company's affairs at the Paris Exposition in 1900, and will remain at Buffalo during the entire period of the Pan American Exposition, he will be very glad to welcome all visitors to the Atkins' space.

the best opportunity ever offered for the exploitation of their manufactures for the North and South American trade. Consequently, they have taken a very prominent space opposite the main entrance of the Machinery and Transportation Building, where has been erected the most pretentious display of goods ever shown by a saw and machine knife manufacturer.

The space occupied is thirty-three feet long by thirteen feet wide and the wall back of it is fifty-four feet long and fifty feet high, thus giving a splendid chance for the display of saws of all kinds. The wall is cased in oak and covered with red velvet, upon which are mounted hand and small circular saws of all kinds, arranged in artistic designs.

A revolving cylinder fifteen feet high and nine in diameter occupies the middle of the floor space. On this are mounted many large solid and inserted tooth circular saws ranging from 88 inches in diameter down, the whole apparatus being turned slowly by an electric motor in the cellar. The space at one end of the exhibit is occupied by a large square pyramid on which are mounted a complete line of hand, kitchen

The object of advertising, in a general sense, is to educate the human mind to think best of your goods when thinking of goods in your line at all—and to attain this requires a skill in arousing, sustaining and directing attention that no school master or college professor in the world is required to exercise in a like degree with his unwilling pupils. But the public can learn, will learn and does learn under the able and energetic efforts of the persistent advertiser.

GEO. H. BURN.

The \$20 gold piece weighs 516 grains, Troy weight. There are 480 grains to the ounce. Therefore this piece of money weighs within 36 grains of a full ounce—an inappreciable difference when held in the hand. The \$10 piece weighs 258 grains, or sixteen more than half an ounce. The \$5 piece weighs 129 grains, or within a fraction of a quarter of an ounce. If any one were to pick up a bag containing \$5000 in gold he would find it heavy. It would weigh, standard weight, 268.75 ounces, or 24 pounds, approximately. He wouldn't go far with it.

## RECENT TRADE PUBLICATIONS.

E. W. Bliss Co., Brooklyn, N. Y. 1901 Catalogue No. 3 having reference to the "Bliss" Straight-Sided Power Presses. This is a handsomely printed and illustrated catalogue on a superior grade of paper to show the half-tone illustrations to the best advantage, which it certainly does, and in it are fully exploited the class of presses to which the title refers, which includes those formerly made by the Stiles & Parker Press Co., as well as the present company. These presses were awarded the Grand Prize at the Paris Exposition of 1900, and show some of the greatest improvements the skill of our American machinists have produced in this especial line. The graphic illustrations and clear descriptions convey every possible point of information that the purchaser could demand.

TIFFIN WAGON Co., Tiffin, Ohio. Catalogue No. 1 of their line of Farm Wagons, Corn Shellers, Cider Mills, Brick Machines and other brick yard supplies. This is a catalogue of 56 pages, with a very attractive cover, artistically lithographed, and giving in its contents full illustrations and descriptions of the important productions for which this company are noted. Their line of Farm Wagons is full and complete, the descriptions are exceedingly clear, and as each article is accompanied by the list price, makes it a good catalogue to order from. They seem to make a large variety of these goods, enough to fill the most exacting demands. The contents of the catalogue also include a large line of "Tiffin," "Favorite," "Challenge" and O. K. Corn Shellers, running from primitive styles to those more scientific in their operation, prices being in proportion. Considerable space is given to the description and illustration of Automatic Brick Machines, those designed to be run either by horse or steam power, together with several other appliances having application to the same line of business.

ASHTABULA TOOL Co., Ashtabula, Ohio, manufacturers of the "Diamond" brand Forks, Rakes and Hoes, have issued a pamphlet catalogue of 28 pages, handsomely illustrated throughout, not only with the articles catalogued, but also interspersed in the text are a number of illustrations of farm and other scenes that add to its interest and attractiveness. It is printed in two colors, giving it a unique appearance, and being printed on excellent paper, is worthy of being preserved in a Hardwareman's library for future reference. They manufacture a full line of steel goods, including two, three and four tine Hay Forks in a large variety of styles; Header Forks, Barley, Hay Baler and Manure Forks, Spading and six-tine Digging Forks, Potato and Manure Hooks, Garden Hoes, Mortar, Street and Weeding Hoes, Cast Steel and Malleable Iron Garden Rakes, Lawn Rakes and Sidewalk Scrapers. Included in its contents is a large variety of special goods, such as Vegetable Scoop Forks, Cotton Seed and Sugar Beet Forks, Barn, Stone and Tanners' Forks, together with Coke and Coal Forks. In the construction of these special goods the company have achieved a deserved reputation, and the Hardware trade will find the catalogue one well deserving of their attention.

STANDARD CASTER AND WHEEL Co., 318-326 East 23d Street, New York, who have so successfully introduced their new Standard Ball Bearing Caster, deserve considerable credit for the unique methods they adopt for exploiting their goods to the trade. They are in the habit of distributing weekly something new bearing upon the publication of the many merits of their important caster, and these are printed on

heavy cover paper, usually in colors as regards typography, and invariably written in a style that will bear perusal and increase the favorable impression already formed from the reading of similar matters that may have preceded the one under inspection. It is a part of the plan that no two of these shall be exactly alike either in shape, size, color, illustration or reading matter, and the natural result follows beyond a doubt that the recipient desires to know more about the article that is exhibited by the manufacturers in such an attractive form. In almost every one of these, the point is made that they will gladly send a "sample set" of any caster that the receiver of their circular matter might be interested in, feeling convinced that it possesses merits of its own that will make further correspondence a natural corollary.

WILLIAM T. WOOD & Co., Arlington, Mass., have recently issued their 1901 catalogue in which is illustrated and described their extensive line of first quality Ice Tools, which has been made by them for a period of time that the veteran Hardware dealer can scarcely remember the commencement of, the company having been established in 1834. The catalogue shows a number of their regular goods that have been greatly improved. As the company state in their introduction, "The fourth generation is now beginning to mingle its progressive vigor with the experience and ripened judgment of the third," and this statement is very cleverly carried out in the contents of the catalogue. Among the numerous important items referred to are the "Perfection" Cultivator, or Field Planer, which is claimed to be the best article for the purpose ever produced, no marking being needed; "Perfection" Plows and Markers, Patent Extension Guide for Markers and Plows; and Three-Tined Needle Bar. In the manufacture of many of these improved tools, steel has taken the place of iron in a number of particulars, and this is especially the case with chisels, tongs and other articles requiring stiffness, every effort being made by the manufacturers to get up an artistic ice tool which will be regarded as "just right" in weight and temper. Full descriptions accompany every illustration; in fact, the descriptions are sufficiently diffuse so as to leave no possible question to be asked. Included in its contents, in addition to the numerous tools required for the cutting and storing of ice, they illustrate a large variety of Ice Tongs in all the styles required by the various sections of the country; also a great assortment of Ice Axes, long and short handled, together with a full variety of smaller tools, including Hand Ice Saws, Ice Shaves and Breakers, "Crescent" Ice Saws, Scales, etc., etc. It is a valuable catalogue of this special class of tools.

MICHIGAN STOVE Co., Detroit, Mich. The advertising methods of the Michigan Stove Co. are well known to almost all the dealers in Stoves throughout the United States, but it may not be universally known that they publish in connection with this, a medium denominated the "Garland Magazine." It is published in regular editions, with the expectation that it will be "distributed by the stove merchants to prospective stove buyers." The attractive manner in which it is prepared and illustrated throughout with the products of this company, and full descriptions specifying the numerous advantages that pertain to each of the several patterns of stoves, make it an admirable medium for advertising such goods. It also contains excellent reading matter, valuable information; popular music is frequently added, and it is undoubtedly welcomed and preserved by all who receive a copy. We have before us a sample copy of the "Trade edition," having reference to Steel Ranges and Cooking Stoves, and the excellent manner in which it is prepared calls forth the above remarks.

## NEW GOODS AND SPECIALTIES.

### Dixon's "Graphitoleo."

Joseph Dixon Crucible Co., Jersey City, N. J., among the numerous specialties made by them that are handled with advantage by the Hardware trade, manufacture "Graphitoleo," which in the present age of "coaster brakes," has been found almost indispensable to the rider of an up-to-date wheel. It avoids all the disadvantages that formerly came from self-oiling tubes and other methods of keeping the wheel in good order while on the road. It has been found a superior article

DIXON'S "GRAPHITOLEO."

to anything in the shape of oil for bicycle use, whether on brakes, chains or bearings, needing but a very small quantity to obtain the best results. It is furnished the trade in collapsible tubes, as shown in the illustration herewith, and in order to make it easy to apply, it will be noticed the manufacturers have added a nose to the tube, so that the contents of the tube can be easily injected into the brake. This improvement has largely increased the sale, and it is certainly well worth the attention of the Hardware dealer handling bicycle sundries.

### Rogers' "Puritan" Pattern.

Simeon L. & George H. Rogers Co., Hartford, Conn., are perpetuating the name of Rogers in connection with the manufacture of silverware, and as they are not in the combination which controls a larger part of this industry, they claim to possess an interest worthy the attention of the Hardware trade. In connection with the exploiting of their products, they give a history of the Rogers trade-mark, which may prove interesting reading to our subscribers. We present the same in this connection.

"In 1846 three brothers—Simeon, Asa and William Rogers—commenced to plate spoons and forks in Hartford, Conn. This was the beginning of the original Rogers Brothers Manufacturing Co. In 1857 William Rogers left this company and started Rogers, Smith & Co., in Hartford, Conn. In 1858 Simeon and Asa Rogers went to Waterbury, Conn., and started the Rogers & Brother Co. They both withdrew from this company in 1861, and as both the Rogers Brothers Manufacturing Co. and Rogers, Smith & Co., had failed in 1862 and went out of business, the three brothers formed the mark of 1847 Rogers Bros., and leased the use of it to the Meriden Britannia Co. In 1863 William Rogers withdrew from this

contract and afterwards started the Wm. Rogers Manufacturing Co., in Hartford, Conn., in 1865."

Trade-Mark:

Trade-Mark:  
**\$ \$ ROGERS**

Trade-Mark:

**\$ \$ ROGERS BROS.**

Among the number of handsome patterns they are placing on the market to support the claim they make in regard to the superiority of their product, we present one of their favorite patterns, the "Puritan," which shows the artistic excellence of their several designs. They manufacture a full line of

ROGERS' "PURITAN" PATTERN.

table ware, including the plainer styles as well as the latest from an artistic standpoint, all of which are fully described in their catalogue, which may be had for the asking.

### Standard Ball Bearing "Philadelphia" Caster.

The Standard Caster and Wheel Co., 318-326 East 23d Street, New York, have revolutionized the sale of furniture casters by the production of the Standard Ball Bearing Caster, which is made in all the various patterns demanded by the wants of the furniture trade. It is claimed to be the only caster in the world that is stamped from steel or other wrought metal throughout, there being no cast iron or any other castings used in any part of it. As there is nothing to break, the strain being so equally distributed, it is perfectly free from friction. The steel ball bearings make the

STANDARD BALL BEARING "PHILADELPHIA" CASTER.

heaviest piece of furniture easy to move about. It is manufactured by the company in three styles: Letter A, an "Oblong Plate Caster," intended for extra heavy furniture; Letter B, "Standard Ball Bearing Stem Caster," designed to fit the Standard socket, and Letter C, "Standard Ball Bearing 'Philadelphia' Caster," which is their newest and latest addition to the line, and of which we give herewith an illustration showing the ball bearings and its other features. It is claimed by the manufacturers that they are rapidly superseding all the older and more primitive styles of casters.

## Sterling and Borasic Razors.

The Smith & Hemenway Co., 296 Broadway, New York, and the Utica Drop Forge & Tool Co., are offering the trade their improved line of Sterling and Borasic razors, shown in the accompanying cuts. One of the advantages claimed for these razors is that they present a complete uniformity, as all these goods are made to gauge and are ground exactly alike. The four patterns which we illustrate below represent four of their latest types which they will have ready for the market during this month. One feature they claim is that the backs of their razors are perfectly straight, and the edges being parallel, they are more easily stropped than any razors made where the blades vary in width.

No. 93226.

No. 93226 is a full Hamburg concaved razor with gimped back and tang, double shoulder and white ivoroid handle. The blade is exactly  $2\frac{7}{8}$  inches long. This is gotten up for shaving extra stiff beards.

No. 9472.

No. 9472 is what they term "Utica's Best," and they guarantee this razor to do all that is required of a razor. The Hamburging on this is  $\frac{1}{8}$  inch wider than any other razor made by them. This is beautifully finished and warranted to be first-class.

No. 83527.

No. 83527 has a gimped tang and fancy celluloid handle. This shows the construction of their round point. They do not make the ordinary style of a perfectly round point, but make it as would commonly be termed a medium. This razor is three-fourths hollow ground, and they advise the use of this among the ordinary trade rather than an extra hollow ground.

No. 83715

A very pretty style is their No. 83715. This has a short blade and is called "the moustache razor." It has a beautiful imitation shell handle and is perfectly balanced.

They state that in addition to these styles they will put out between 75 and 100 all told when their line is complete. They are using the borasic steel in the construction of all of their razors. They claim to be experts in handling this grade of steel, as they have been working it for a number of years.

In addition to manufacturing a complete line of American razors, the Smith & Hemenway Co. are sole importers in the United States of the celebrated John Engstrom frame back goods and the Ran-Tan-Ka-Rus "Red Devil" razor, which is made in two patterns, a straight barbers' pattern and a curved pattern for individual use.

The lines of goods controlled by this company are fully set forth in their "Green Book of Hardware Specialties," which will be sent the trade on application.

## Hibbard's Improved Adjustable Hollow Auger.

C. B. Hibbard Mfg. Co., Grand Rapids, Mich., are placing before the Hardware trade Hibbard's Improved Adjustable Hollow Auger, the general appearance of which is indicated in the accompanying illustration. All wearing parts are manufactured from the best quality of steel. It is provided with pivoted steel jaws, and will cut tenents from  $\frac{1}{4}$  to  $1\frac{1}{4}$  inches. Among its numerous features may be mentioned the fact that it has a graduated scale, best quality of tool steel knives, and steel cap and shank, and is provided with a

HIBBARD'S IMPROVED ADJUSTABLE HOLLOW AUGER.

movable malleable iron stop. To adjust, it is only necessary to loosen the steel nut and turn thumb gear, which brings the centre of jaws in line with centre of shank. It is claimed by the manufacturers that actual tests prove it to be the smoothest and fastest tenent cutter now offered the trade. The manufacturers have had twenty-five years' experience in products of this character, and refer to this their latest with the greatest confidence in its underlying merit. They also are manufacturers of spoke pointers and shaves, and other wagon and carriage makers' tools. Catalogue and prices will be sent on application.

## New Garden Cultivator.

The Garden Cultivator Co., 1107 Clark Avenue, St. Louis, Mo., are placing upon the market an entirely new article in the way of a Garden Cultivator that is meeting with considerable popularity in the trade. It is made from spring

**PATENTS** Preliminary Consultation Free.  
HENRY J. MILLER,  
55 Equitable Building, BOSTON.

steel, oil tempered, has six teeth or prongs, with polished face, and weighs about three pounds. In planting and cultivating it is intended to take the place of a spade, hoe, rake and marker, and, as claimed by the manufacturers, works with greater facility and achieves more direct results with less labor. By its use, it leaves the ground pulverized and level, and makes the process of planting quite easy. The back may

NEW GARDEN CULTIVATOR.

be used as a marker, as it enables the operator to mark two rows seven inches apart at one stroke. The teeth are then used to draw the dirt from both sides, giving the seeds an even covering. In use the cultivator need not be raised out of the ground, but can be pulled through, making it easier and better than pushing with a wheel hoe. Having a long handle and six small, sharp teeth, it enables the user to cultivate around blackberries and raspberries without necessarily coming in contact with the thorns. It is claimed to be superior to almost everything in the line for such an operation as loosening the surface around a grapevine, the teeth entering hard or soft ground with equal ease.

#### "Diamond" Cotton Seed Fork.

Ashtabula Tool Co., Ashtabula, Ohio, manufacturers of the "Diamond" brand of forks, rakes, hoes, etc., among their numerous special forks adapted for unusual requirements, are manufacturing the "Diamond" Cotton Seed Fork, of which we give an illustration herewith, which has met with

"DIAMOND" COTTON SEED FORK.

considerable popularity and a large and extended sale. They are made scoop-shape or flat in either style, and are constructed from one solid piece of cast steel, being fitted with wide and heavy strap ferrules. They are made in two styles, 10 and 12 tines, the length of tines being 16½ to 17 inches, and the width of the fork running respectively at middle, 14 to 16 inches, according to size.

#### "Swedoh" Tubular Racing Skate.

We show herewith cut of the "Swedoh" Tubular Racing Skate, manufactured by the Union Hardware Co., Torrington, Conn. (Tower & Lyon, 95 Chambers Street, New York.) This skate is very handsome in appearance, is light and strong. While designed as a racing skate, it will be found ad-

mirable for all skating purposes. The runners are made of high grade tool steel, 1-16 of an inch in thickness, and are very hard. Brazed to the runner is a diamond-shaped tube extending the entire length, which supports the runner so that

"SWEDOH" TUBULAR RACING SKATE.

it cannot spring nor warp. The foot plates are fastened to the runner by means of steel shells which are brazed to the runner tube, thus making a very rigid skate, weighing but 22 ounces per pair. Three lengths of runners are made and the following sizes can be supplied:

- 14 inch runner, 10½ and 11 inch.
- 16 inch runner, 10½, 11 and 11½ inch.
- 18 inch runner, 11, 11½ and 12 inch.

#### The International Sprinkler Company.

To purchasers and users of Automatic Fire Extinguishing Apparatus.

The General Fire Extinguisher Co., of Providence, R. I., has, for more than a year past, threatened the International Sprinkler Co., of Philadelphia, Pa., and its customers, with suit for alleged infringement of Letters Patent No. 372,220, dated October 25, 1887, to F. Grinnell, and Letters Patent No. 415,166, dated November 12, 1889, to J. R. Freeman, R. W. Newton, No. 514,163, dated February 6, 1894.

The International Sprinkler Co. advise purchasers and users of its automatic fire extinguishing apparatus that it has caused to be made a complete and exhaustive examination as to the validity of the patents named, and as to their alleged infringement by the International Sprinkler Co.'s apparatus, and has been led to the undoubted conclusion that the claims of said Letters Patent alleged to be infringed by the International Sprinkler Co.'s apparatus are invalid and void, because they do not cover anything that was patentably novel at the dates at which said respective patents were issued, and to the further conclusion that no valid rights under said Letters Patent have been infringed by apparatus made and sold by the International Sprinkler Co.

The International Sprinkler Co. advised the General Fire Extinguisher Co. of this conclusion more than a year ago, and the said last named company failed until within a few days past to bring any suit against the International Sprinkler Co. for said alleged infringement. Said suits have just been begun, and they will be defended by the International Sprinkler Co.

The International Sprinkler Co. desires to inform purchasers and users of its fire extinguishers that should any suit or suits be begun against them for alleged infringement of said apparatus upon the patents above named, it will, at its own expense, defend said suit or suits and hold the purchasers and users of its apparatus harmless from any recovery of profits, royalties, damages, or costs, incident thereto.

INTERNATIONAL SPRINKLER CO.,  
CLARKE MERCHANT, President.

## REVIEW OF THE MARKETS.

**Wire Nails:** There is still a steady demand for Wire Nails, but not of so large volume as has characterized the season's trade. Prompter shipments are more largely the rule than heretofore, but complete orders covering all the sizes desired are among the rare events. The few offerings from outside plants have so far affected the market but little. The continued steady demand for this staple has caused favorable comment from the jobbing trade, showing the advantage of a stable market. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
"    less than carload lots.....	2.35
To retailers in carload lots.....	2.40
"    less than carload lots.....	2.50

**New York prices.** with a demand about as usual for this season of the year, prices remain firm at following quotations:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** The limited demand now prevailing in the Cut Nail market is one natural to the season's present requirements. Prices are steadier in many ways than at any time during the season, and the following quotations are unchanged: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	2.10
Carload lots.....	2.05 to 2.10

**New York prices.** With only a fair demand, but good for the period, prices remain as previously noted.

To jobbers in carload lots on dock.....	\$2.13
"    less than carload lots on dock.....	2.18
Small lots from store.....	\$2.25 to 2.30

**Barb Wire:** The mills were in hopes of catching up on some of their back orders, and removing the feeling of uncertainty in regard to orders being filled in time, which is held by many jobbers, who are still shy of a full supply; but supplementary orders keep coming forward, showing the jobbers are poorly supplied with any surplus stocks, and indications point to the mills running on full time for many weeks to come. No change in quotations, which remain as follows: f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
"    Galvanized.....	2.90
"    less than carload lots, Painted.....	2.65
"    Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
"    Galvanized.....	3.00
"    less than carload lots, Painted.....	2.80
"    Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** The steady conditions as to demand and supply continue quite favorable in the Plain Wire Market. The demand has been so excessive during the season now passing, a number of manufacturing plants outside the combination announce their ability to supply several of the ordinary grades of market wire. The increasing usefulness of this commodity in many lines of manufacture, however, keeps up a steady demand, which the stability in prices has done much to encourage. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
"    less than carload lots.....	2.30	2.70
To retailers in carload lots.....	2.35	2.75
"    less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence Wire Advances (Catch Weights).		Galvanized.	
Nos.	Base.		\$0.40 extra.
6 to 9.....	\$0.05 advance over base.....	.40	"
10.....	.10	.40	"
11.....	.15	.40	"
12 and 12½.....	.25	.40	"
13.....	.25	.40	"
14.....	.25	.40	"
15.....	.45	.75	"
16.....	.55	.75	"
17.....	.70	1.00	"
18.....	.85	1.00	"

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Cordage:** There is but slight change to note in the market for Cordage, prices remaining about previous quotations, as given below, with a rebate of ¼ cent on carload lots of Manila.

	Pounds.	Cents.
Manila, 7-16 inch and larger.....	10½	
¾ inch.....	10½	
½ inch and 5-16.....	11½	
Sisal, 7-16 inch and larger.....	8	
¾ inch.....	8½	
½ inch and 5-16 inch.....	9	
Lath Yarn, medium and coarse.....	7½	
Jute Rope, No. 1.....	6½	
No. 2.....	5½	

**Binder Twine:** A more active market on Binder Twine is noticeable, especially in the Western territory, and the good supply of raw material has kept the market in a fairly good condition without radical changes in prices. The following quotations are for small lots of twine, a rebate of a ¼ cent per pound being entertained for carload lots, f. o. b. Eastern factory.

	Pounds.	Cents.
White Sisal, 500 feet per pound.....	7½	
Standard, 500 feet per pound.....	7½	
Manila, 600 feet per pound.....	9½	
Pure Manila, 650 feet per pound.....	11½	

**Linseed Oil:** Prices have twice advanced since our previous issue, and the following are the latest quotations by the Dean Linseed Oil Co., under date of June 20th:

In lots of less than 5 barrels.....	71 cents per gallon.
In lots of 5 barrels or more.....	70 cents per gallon.

The five-barrel prices applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 85 cents per gallon.	

### THE PHILADELPHIA TRADE.

The end of the Spring season is now in sight and yet there are no reports from manufacturers of a let-up in trade—on the contrary, it is still exceedingly difficult to get some goods, and conditions in this respect are scarcely better than they were a month ago, while constant complaint is heard of the advanced cost of raw material.

Under such circumstances, prices are naturally remaining very even in tone, and the only changes being an upward direction. The warmer weather is keeping up the demand for seasonable goods, and it is rather surprising that, in spite of the cold and backward season, it is very evident that the stocks do not remain in the hands of the retailer, but are rapidly passing into consumption.

It is clear that labor is well paid and has money to spend.

and no doubt many are now enjoying the comforts of life who formerly found it difficult to procure the necessities. The flurry is still without any depreciable effect on trade, and the outlook for the Summer and Fall trade is good.

BIDDLE HARDWARE CO.

#### THE BALTIMORE TRADE.

Following the month of May, memorable for its days of rain, June was ushered in under conditions most unfavorable; cold, damp and with lowering clouds, only to break away into those fair and beautiful days that poets love to dream and write about. In consequence of continued cool and cloudy weather, the farmers were about two weeks later than usual in getting their seasonable crops into market, such as peas and strawberries, but at present the prices ruling are high and supply large, so we can anticipate immediate improvement in collections that have been sluggish for several weeks. Advices from the potato section of our territory are most encouraging, and unless something unforeseen occurs to mar the bright prospects now so apparent, we will have a large and healthy Fall business. We this month enter upon what we term our quiet season, when small or filling-in orders take the place of good sized stock orders, and if they continue coming, as at present, we can justly feel proud and happy.

H. W. WEBB & SONS.

#### THE BIRMINGHAM TRADE.

It now appears that June will be the most quiet month of the year so far. We have just completed stock taking and are preparing for the Fall season. The season is about over on many lines of goods used by the farmers. The prospect for Fall trade is pleasing. With a firm market and good demand, we do not see why business should not be fair. We find a tendency among some of the trade to get out in advance of the season when the goods will be required, hoping thereby to obtain some advantage of his competitor who waits until goods are needed before offering them. We would be glad to see practices of this kind corrected, since it leads to demoralization by inducing over-buying; it also provides a temptation to the one who follows and sees the orders all placed to cut prices for effect, thus producing demoralization and often resulting in harsh criticisms. Such sales must always be guaranteed and offer inducement to hunt for cut prices. Some people will make closer prices when it is known to be needed to use against a guarantee of this kind. Hence, the better plan will be found to wait until the goods are needed before offering them. We are glad to believe that this custom has been amended some, and hope it will be abandoned altogether.

MOORE & HANDLEY HARDWARE CO.

#### THE PITTSBURGH TRADE.

May was a cold, wet month, but notwithstanding, a good month for business. Sales ran ahead of any month up to

date, establishing a new record, and June opened with good promise of equaling May. Early closing of wholesale business houses, with Saturday half holiday, during the Summer months has now become an established custom. It would be well for customers to remember this when ordering by mail, and get their orders in the hands of the wholesaler by Friday evening, if goods are wanted to be shipped on Saturday.

The convention of Credit Men held in Cleveland this month was of interest to all merchants. Credit ratings are being rapidly reduced to a science in the hands of the members of this Association. It should be the endeavor of all honest merchants, both wholesale and retail, to assist in having accurate and full reports accessible to interested parties, and withholding such information should act as a bar to credit buying. Collections are good.

LOGAN-GREGG HARDWARE CO.

#### THE COLUMBUS TRADE.

There is no falling off in the volume of business yet, and the chief trouble is to get goods. Never in our experience have we been so annoyed in getting goods as this year. We are just in receipt of a letter from The American Steel and Wire Co. saying they cannot ship us any more barbed wire before the latter part of July. We have had standing orders all the year, and have not had barbed wire one-half of the time this year. We can get nails and smooth wire with some degree of promptness; but there is outside competition on both nails and smooth wire, but none on barbed. We cannot believe that The American Steel and Wire Co. are running all their machines on barbed wire. If they are, they could keep nearer up, but what object they have in starving trade, is what we cannot understand.

The demand for harvest tools and binder twine is unusually good, and it looks very much like a shortage on twine, especially pure manila. There has been too much rain in some parts of the State for corn, and it is not looking well. Weeds thrive in such weather. Too much rain is as bad as not enough; but there is plenty of time yet for corn. The strike among the carpenters, machinists and moulders is affecting the city trade some. The papers announce each day that the differences are about adjusted and the strike is practically over, but it is something like our Philippine war, is still entirely unsettled, but we have faith that both will be settled some of these days.

THE SMITH BROS. HARDWARE CO.

#### THE ST. PAUL TRADE.

The crop conditions in our territory are improving every day. A fair return is assured, and it may be that we shall have an extraordinary crop if conditions continue to be good. This includes the States of North and South Dakota, Minnesota, Wisconsin, Iowa and Montana, and we certainly now feel that our people are favored.

The scarcity of some lines of goods is causing us much inconvenience, particularly barbed wire, for which there is an extraordinary demand and no supply. The jobber and retailer are blamed because they do not have a supply, and it does seem strange that it should be short, because it has always been understood that if the mills desired to, they could make at least ten times as much as the demands could possibly be.

Prices on all lines are firm, with no prospect of a break.

C. W. HACKETT HARDWARE CO.

#### THE OMAHA TRADE.

The volume of business continues unusually large even for an active season, and the demand can hardly be assigned to any individual line, but covers the entire list. The feature of the unusual scarcity in barbed wire is still maintained, and many other seasonable and other goods are almost as hard to get. Builders' Hardware and tools are in large and active demand, emphasizing the prosperity of the country, and

dealers tell us that many of the buildings now being erected through the country districts are demanding a fine grade of bronze Hardware, where a few years ago a 25 cent rim lock was thought good enough for buildings of this class. Some little anxiety was felt in regard to the wheat crop a few weeks ago on account of dry weather, but general rains throughout the State have relieved this anxiety, and prospects for a large crop of small grain were never more favorable.

Collections could hardly be improved.

RECTOR & WILHELMY Co.

#### Increasing Exports on Tin Plates.

American manufacturers of tin plate are making rapid gains in their attempt to enter the foreign markets of the world. To be sure, their exports are yet small as compared with the domestic demand which they are meeting, but they are again reducing the imports, which temporarily increased in 1900 under the excessive demand and extremely high price of materials, and are at the same time increasing their exports in a manner which proves interesting to those who have watched the development of this comparatively new industry in the United States. The figures of the Treasury Bureau of Statistics show that the exports of tin plates from the United States, which in the ten months ending with April, 1899, amounted to only 183,955 pounds, and in the ten months ending with April, 1900, to 275,990 pounds, were, in the ten months ending with April, 1901, 1,306,100 pounds. In imports of tin plates the figures for the ten months show a material decrease as compared with the quantity imported during the same period of the preceding fiscal year, being 98,609,722 pounds, as compared with 123,598,773 pounds for the ten months' period of last year.

Our total exportations of tin plate in the fiscal year 1901 seem likely to be from 8 to 10 times those of 1899, while the importations of tin plates into the United States promise to be little more than one-tenth those of 1891, the year of the largest importation of tin plates into the United States, and but about one-fifth of the average annual importation during the five years prior to the establishment of the tin plate industry in the United States.

The record of tin plate prices during the past two years shows a remarkable fluctuation, largely due to the unusually high price of material in 1900. Quotations for tin plates furnished to the Treasury Bureau of Statistics show the price per box of 100 pounds of tin plates of Bessemer steel in New York in April, 1901, as \$4.20, the uniform price since January 1, 1901; in January, 1900, the price was \$5.50, while in January, 1898, it was \$3.80. Meantime the price of Straits tin used in the manufacture of tin plate has increased from

13.82 cents per pound in January, 1898, to 34.62 cents in July, 1900, and thence downward to 26.2 cents on April 19, 1901, and again advancing to 23.15 cents on June 1, 1901; while steel billets increased in price from \$15 per ton in January, 1898, to \$35 per ton in January, 1900, since which date the price has fluctuated considerably, finally becoming practically stationary at \$28 per ton in March, 1901.

The following table, from the annual report of the American Iron and Steel Association, shows the production of tin plates and terne plates in the United States during each calendar year from 1892 to 1900:

Year.	Long Tons.
1892 .....	18,303
1893 .....	55,182
1894 .....	74,260
1895 .....	113,666
1896 .....	160,362
1897 .....	256,598
1898 .....	326,915
1899 .....	360,875
1900 .....	302,655

The following table shows the imports of tin plates into the United States in each calendar year from 1890 to 1900:

Year	Tons.	Dollars.
1890 .....	329,435	\$23,670,158
1891 .....	327,882	25,900,305
1892 .....	268,472	17,102,487
1893 .....	253,155	15,559,423
1894 .....	215,068	12,053,167
1895 .....	219,545	11,482,380
1896 .....	119,171	6,140,161
1897 .....	83,851	4,366,828
1898 .....	66,775	3,311,658
1899 .....	58,915	3,738,567
1900 .....	60,318	4,617,813

The following table shows the exports of tin plates from the United States in the ten months ending with April, 1899, 1900 and 1901, respectively:

Ten months ending April 30.	Quantity exported. Pounds.
1899 .....	183,955
1900 .....	275,990
1901 .....	1,306,100

Employer—You are discharged, sir, for gross neglect of duty.

Sam—Will you please give me a recommendation testifying to my aptitude for work?

Employer—Why, certainly.—*Ex.*

# STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

### The Ericsson Telephone Co.'s Pan American Exhibit.

We have been informed by the Ericsson Telephone Co., 296 Broadway, New York City, that the Ericsson telephone was awarded first prize at Paris, 1881; Madrid, 1883; Vienna, 1884; Stockholm, 1886; Copenhagen, 1888; Chicago, 1893.

Also that their exhibit in Paris in 1900 was from the St. Petersburg, Russia, factory, which was also awarded first prize. This year their exhibit of a 50 subscriber switchboard and a few of their different telephones at the Pan American Exposition at Buffalo is made in Section S, of the Electricity Building, and W. Jac Marland will have charge of exhibit.

A cordial invitation is extended to all their friends and patrons to inspect their exhibit and talk over their instructions. They are exhibiting their goods in connection with others, in a collective electrical exhibit which will doubtless prove of interest to many of our readers.

### Aluminum Bronze Powders.

Germany is the home of bronze powder manufacture, and the method of making aluminum powder in that country is first to roll the aluminum into thin strips or ribbons, then beat it into leaf by power hammers, and finally stamp it into powder. Much of the aluminum powder is sold for silver bronze. The silver bronze is not made from silver, but from a cheap alloy having the color of silver. It is sold for less per pound than the aluminum, but the silver bronze being heavier, a pound of aluminum bronze will cover much more surface and is really cheaper. There is a tendency to adulterate the aluminum powder with other metals, which destroys the lustre and decreases the value of the powdered aluminum. If the pure article is wanted it must be made from pure metal and kept from other powders. Scrap aluminum will not answer for making a fine grade of powder.

The uses of aluminum bronze powder are everywhere in evidence. It is used as a paint for covering iron, lead, zinc, wood, etc., in all forms. A common use at present is in covering letter boxes. Of late years stove manufacturers have been using it for the coating of stoves and in the trimmings. In some cases it has replaced tin plate. The paint is being used extensively on steamers and yachts. It is probable that the next few years will see a much larger consumption of aluminum bronze powder than at present. It is considered an ideal coating material for the use of plumbers, steamfitters and stove manufacturers. When mixed with the proper grade of varnish it adheres readily to iron, lead and zinc, and the paint is not affected by varying temperatures and gives a clean, neat appearance to radiators, pipes and stoves.

Powdered aluminum has received recently an extremely interesting metallurgical application in the reduction of refractory oxides to the metallic state. By mixing the powder with oxides and igniting the mixture an intense heat is generated, which is sufficient to melt the reduced metal.—*The Aluminum World*.

To hold sash open. Much easier than Hook and Eye.

## The Making of Saws, from the Crude Material to the Finished Product.

In almost every household is to be found a hand saw, but little does one accustomed to use or handle the tool think of the amount of labor which must be expended in the manufacture of it. Nor does one appreciate the many operations which must be gone through before the rough black sheet of steel becomes the finished and glistening saw, which may be bent end to end only to spring back in place without leaving a trace of the strain which has been sustained.

In its variety of industries, Newark can boast of one of the largest saw works in existence. Here hundreds of saws of all varieties ranging from the smallest surgical instrument to the great "buzz saws" used in lumber camps, are turned out daily. By far the greatest portion of the factory's output consists, however, of the higher grades of hand saws. It is this type which requires the greatest care and skill in its various stages of manufacture. In the first operation toward the making of a hand saw large black sheets of crucible steel, rolled to the proper gauge, are fed into a shearing machine. Here they are cut into the proper shapes, and a "blank" is formed. Stops are arranged on the table of the machine so that when the sheets are fed against them they will be in the desired position for the knife to cut into the proper shape. When the sheet is in position the operator trips the machine by means of a foot lever. Instantly the knife descends, cuts the blank and returns to its former position; remaining there until brought into play again by the operator.

### CUTTING THE SHEETS.

The shape of the knife used determines the character of the cut. For a straight-back saw, a straight cut is taken, but a curved blade produces the blank for a hollow-back saw. The knife on the machine has a slanting edge. The object of this is to bring only a point of the knife in contact with the metal at one time. The cut begins at one edge of the sheet. As the knife descends the cut spreads across to the other end. Through this method the cut is not only more even, but less power is required to operate the machine.

The blanks are taken from the machine, presumably of the same size and thickness. In order to ascertain whether the steel used is of the proper gauge and the blanks of the correct size, each blank is weighed, this being the simplest method. The blanks must next be "toothed," or, in other words, the teeth must be formed. This process is ingenious in its simplicity. The blanks are fed between two small rollers, which, revolving at an even speed, bring the blades to pass over a die and in the path of a flycutter. This cutter consists simply of a solid wheel about ten inches in diameter, with a V-shaped tool protruding from its face. When the machine is set in motion and the blank is brought before the flycutter, the tool strikes the blank with each quick revolution of the wheel, nicking out little triangles of steel and leaving the teeth in their crude form.

The cutter wheel revolves at a much higher rate of speed than do the feed rollers. For instance, while the feed rollers have advanced the blade an inch the cutter wheel has made nine complete revolutions, and consequently nicked nine teeth to the inch. The feed rollers always turn at the same pace, but the speed of the cutter wheel is altered, according to the number of teeth required per inch. If the machine has been running on work with nine teeth to the inch, and it is desired to put on fine work with eighteen teeth per inch, the speed of the cutter wheel is simply doubled. This is accomplished by substituting various combinations of change gears.

### IN THE HARDENING FURNACE.

After the proper number of teeth have been nicked in the blank it is passed between a pair of steel pressure rollers, so that the burrs which generally project from the notched spaces are removed. This leaves the edges of the teeth

smooth, and although the blank has been given its form, it is far from being a finished saw blade. It now looks as if it were made of ordinary sheet iron, but it is about to undergo a test which only the finest of steel can endure. At this stage the blank is soft. It must be brought through a series of operations which will allow it to assert its character, and the next step is one of greatest value to the tool.

The blank must be placed in a hardening furnace. This furnace is built up of brick, with a floor of tiling. Underneath this floor a fire is built, which heats it to a glowing red. The blade is placed on this floor, and when it has attained a "cherry red," the operator takes it out with a pair of tongs and quickly plunges it edge first into an oil bath. This process gives the blade the hardness and brittleness of glass; in fact, it is termed "glass hard."

In order to remove the brittleness it must now be tempered, or a certain amount of this extreme hardness removed. This is done by bringing the blade in contact with the heat of less intensity than that which it underwent in the hardening furnace. It is accordingly placed in a tempering furnace. This is, in reality, a hot press. It consists of two heated dies with smooth surfaces. The blade is placed between the dies, and they are pressed together as tightly as possible. This straightens the blade, taking out any warping which may have resulted from the hardening. Having been in the press a sufficient length of time, it is ready for the next step—the "smithing." Here the saw is hammered and flattened and made perfectly straight. Great precision and experience is required in this work.

### GRINDING THE BLADE.

Grinding is the next operation. A great grindstone, revolving in water, does the work. The blade is pressed firmly against the stone by an auxiliary wheel controlled by a double screw and a handwheel arrangement at the top of the machine. First the center blade is run through and ground evenly on both sides, and here it assumes its first degree of brightness. A good saw is thinner at the back than at the cutting edge, consequently the blades must be ground to a taper. The blades are again fed between the grindstone and pressure plate, and are returned automatically to the hands of the feeder, who puts them through again and again until they are ground to the proper gauge.

The back of the blade is ground to taper from the teeth to the back and from the handle to the point. The tooth side and hilt are of an even edge. All high-class saws are ground to taper. The benefit of this feature in practice can readily be realized. It makes it impossible for the back of the blade to catch or "stick" in the kerf while taking a long cut.

The "CANTON"  
All Galvanized Cans  
Are the BEST  
BECAUSE THEY ARE MADE

in the BEST way  
at the BEST price.  
A TRIAL  
WILL CONVINCE YOU.  
J. H. ELLER & CO.,  
CANTON, O.

The grinder becomes expert in the work, and by carefully feeling the weight of the blade can tell quite accurately when it is properly ground. When he thinks it is nearly finished he tests it with his gauge, and when found to be correct it is passed on to the next operation—that of “drawing,” which is in reality, another grinding or polishing operation.

Here the blade is ground by hand against a fine wet grindstone, and the surface is prepared to take the high polish which is given in the next stage on the “glazing machine.” This machine consists of a large wooden wheel faced with walrus hide and a pair of reversible rollers running ordinarily in the same direction as the polishing wheel and controlled by a lever to the left of the operator. The blade is placed on the rollers, dusted with emery powder and brought up firmly against the revolving polishing wheel.

#### BLOCKING.

About six inches of one end are glazed first, then the reverse end of the blade is started through, and when the point previously polished has been reached the rollers are reversed and the blade has been given a beautiful sheen.

Another important step requiring much skill on the part of the mechanic is now in order. It is that of “blocking.” Each blocker is provided with an anvil and a lignum-vitæ block, on which he hammers the saws so that they shall not be too fast or loose, but shall possess the proper tension, spring and character. If the saw is what is termed “fast,” the metal is too long on the edge and needs hammering through the centre, or if too “loose,” the metal must be stretched on the edge. All saws of whatsoever kind are made loose through or toward the centre, so as to keep the edges stretched tight. This enables them to cut in a straight line, as otherwise they would run zig-zag through the kerf.

The blades are then burnished, this operation taking out all marks of the blocker's hammers and imparting a high finish. The teeth are next set, each tooth being set by a stroke of a hammer. Experienced workmen perform this operation with remarkable accuracy and rapidity. Setting the teeth of a saw consists of bending them so that one tooth is inclined to the right and the next to the left and so on throughout the whole length of the blade. It will be seen that they thus protrude slightly beyond the side of the saw. This is necessary so that they may make sufficient clearance for the body of the blade. It is also a help to the principle of preventing the saw sticking in the cut.

The tooth is then ready to receive its edge and the blade undergoes filing. In most instances this is done on a machine especially designed for this purpose which performs the work entirely automatically. In the case of very fine saws the filing is done by hand.

#### TEETH ARE SET FIRST.

It may be noticed in this connection that the teeth are first set and then filed, quite contrary to the practice of many carpenters, who file the teeth first and then set them. The object of setting the teeth first is to avoid the possibility of injuring them after they have been filed, as it has been found that the reverse practice sometimes results detrimentally to the blade.

An extremely important operation now awaits the blade—that of stiffening. The different processes of hammering which the saw blade has passed through have altered the arrangement of the molecules in the steel. In order that they may assume an arrangement which shall give the blade the desired qualities and elasticity, it is stiffened by being dipped into a bath of sperm oil heated to 700 degrees. The blade is allowed to remain in the bath for a short time and then the oil is allowed to drip off. The blade is dried in sawdust and it is ready for the etching-room.

Here the name, brand, trademark, etc., are etched on with acid. Impressions of whatever it is intended to etch on the bright surface are taken with transfer ink on porous paper, from steel plates embodying the design. This is done by a small hand press, similar to those used in engraving work.

The paper with the ink is then placed on the blade, and after a slight rubbing the paper is moistened and taken off, leaving the ink impression on the surface of the blade; the surrounding space is then varnished so as to be protected from the acid. Nitric acid is then applied with a brush, eating in wherever the steel is not protected by the transfer ink or varnish. This produces the desired marking. After being washed in lime water, so as to be freed from the acid, the blade is ready for the final operation, that of handling.

#### MAKING THE HANDLES.

Thoroughly seasoned and selected lumber is placed in a heated room and dried for the handles. It is then planed down to an even thickness and then sawed into small pieces. The markers describe the shape of the handles on a strip with pencils around a sheet-iron pattern. About four strips of the wood are nailed together and they are cut out by band saws. A hole is bored in the centre of each handle and the middle is cut out by the use of a jig saw. “Jimping” is the next operation. The roughly cut handles are brought in contact with swiftly revolving cutters and the edges rounded. The filers next take hold of the handles and work them into a finished shape.

They are then held against a belt to which sand is glued and a smooth finish given them. The next step is varnishing and polishing, after which comes “slitting,” as it is called in the factory, or the process of sawing the slot in the handle in which the saw blade rests. Then the handles are bored and countersunk so as to admit the fastening bolts. The woods used chiefly in the making of the handles are beech, cherry, apple, walnut and hard woods from South America. Beech is probably more universally used than any.

#### Homely Relatives of Diamonds.

The closest relative of the diamond is a smooth black substance called graphite, says a writer in *St. Nicholas*. In one form you handle it every day, for graphite is used in making lead pencils. Gas carbon is a cousin of the diamond, and is obtained, as you might imagine from the name, in the process of making gas. Only three things come from bituminous coal—gas, coal-tar and coke. Gas carbon is another name for coke. Now, the diamond gives exquisite and inimitable sparkles of light, which makes it of great value as a jewel; but it gives only the pleasure of possession. Its sober-hued cousin, coke, affords broad beams of light, making the path of night easy to travel and lessening the crime that used to prevail in dimly lighted streets, for from coke the long black pencils, or “carbons,” used in arc lights are made.

The American Steel & Wire Co. have included a wire and nail plant in the St. Louis district in their holdings. This plant, lately operated by the Merchants' Wire Co., at Granite City, Ill., has a capacity of about one hundred tons daily. It has been over-crowded with business for some weeks, and will now be taxed to its full capacity under more favorable conditions in the manufacture of plain and barbed wire and wire nails. It is thought that it will now be able to catch up on deliveries.

It is estimated that within a radius of sixty miles of Pittsburgh, not less than 150,000 men are employed in mills and factories, and that the capital invested is not less than \$2,000,000,000. This is a concentration of industry and enterprise that certainly was not in the ambitions of Pitt or the dreams of Penn. Pittsburgh is becoming the hub of an empire wheel, and in fact is looming up as the iron and steel metropolis of the world, nor is it lacking in its Carnegies to exploit its resources and direct its destiny. It is, however, but the seedling of others that are yet to be born in the family of giants, with the United States as papa.

Be prompt in all things.

Consider well, then decide positively.

**ASHTABULA TOOL CO., ASHTABULA, OHIO.**

ERIE, PA., March 13th, 1900.

GENTLEMEN:—Replying to your favor of the 9th, would state that we have received the Miller ladders and have given them a very good test, and would say that we consider them the best ladder we have ever had.

Yours very truly,  
EDISON ELECTRIC LIGHT & POWER CO.

For Catalogue and Description, Write to  
**MILLER LADDER CO.**  
204 Orleans St., Chicago, Ill.

The "Miller" is a radical departure from the conventional style of step ladder. It has an individuality entirely its own which has won for it recognition as the standard ladder in the decorating trades.

### Kitselman Bros.' New Wire and Nail Plant.

By a deal just consummated Muncie, Ind., is to have added to her list of large manufacturing establishments another, which will employ 300 skilled men and produce goods which have not before been included in the many and varied products of Muncie's factories.

For four or five weeks the Kitselman Brothers, proprietors of the large woven wire fence and portable woven wire fence machine factory in Council Street, have been negotiating with the Standard Sanitary Manufacturing Co., of New Jersey, for the purchase of what is known as the Patton Hollow Ware plant, East of the city. The negotiations terminated successfully, and Muncie is to be benefited by the immediate installation of a wire and nail mill with a hundred ton capacity. The woven wire fence business of the Kitselman Brothers has been growing so rapidly that they had considerable difficulty in getting wire in sufficient quantities to supply their needs. They therefore concluded to put in a mill and make their own wire.

The greater portion of the machinery has already been contracted for. Mr. Herbert Clifford formerly with the American Steel and Wire Co., who has had years of experience in the wire business, has been employed by the Kitselmans and is now in Muncie ready for active operations which will begin at once.

The plant and the necessary machinery and supplies to equip it will represent an investment of \$125,000 to \$150,000, and when in full operation will give employment to 250 to 300 men. This added to their present force will make a total of 400 to 450.

The grounds and buildings acquired by the Kitselman Brothers are, in location and arrangement, especially adapted for a factory of this kind. The grounds contain eleven acres, giving plenty of room for the contemplated additions to the large buildings already on the grounds, which consist of a main building 450 x 50 feet with an engine room addition, a foundry room which will be used by the new occupants as galvanizing quarters 130 x 250 with an 80 x 50 L and a warehouse running full length of the building and L, a warehouse

150 x 100 and storage room 50 x 125. Switches from the Big Four and L. E. & W. now connect the factory site with those lines and the right of way of the C., I. & E. and C., R. & M. is just across the river. Work will be started at once on the first gas well to be drilled near the plant, and it is expected to secure on grounds from wells drilled sufficient fuel to supply the mill.

Judge John H. Baker, of the United States Circuit court, recently handed down a decree, holding that the Kokomo Fence Machine Company had infringed the letters patent of Alva L. and D. M. Kitselman, the owners of the patent for woven wire fence, and enjoining the defendant from making, using or selling in the United States machines which infringe on their letters of patent.

This decree makes Kitselman Brothers the only manufacturers of a portable woven wire fence machine in the world, and as a ready-to-put-up fence made on their looms is surrounded by all the safeguards in letters of patent, they have almost a monopoly on this product, there being but one fence at all similar and that one not considered in competition. At the present time Kitselmans have eight looms running night and day turning out this product and yet cannot keep up with their orders. As soon as the wire plant is in operation they propose to put in 50 looms, using the entire product of their wire mill and turning out each day fifty miles of coil spring wire fence. The new plant is to be in operation September 1.

Russia took first place in 1900 as regards turning out naval vessels, while England and France dropped behind considerably. Germany followed Russia, with Japan third and England fourth. Russia's quota was two first-class battle-ships, one first-class armored cruiser, eight destroyers; and three first-class battleships, one first-class armored cruiser, one second-class cruiser, two third-class cruisers and three destroyers were launched. As for England, only two first-class armored cruisers, one third-class cruiser, four sloops and eighty destroyers were commissioned.—*Exchange*.

Dare to do right, fear to do wrong.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Bowling Green, O.—W. H. Duncan.

Falls Creek, Pa.—A. E. Dun, of Reynoldsville, has broken ground on his Main Street lot, upon which he will erect a store room and conduct a Hardware store.

Hamilton, Ont.—The F. A. Carpenter Hardware Co. has been incorporated with a capital of \$25,000.

Longmont, Colo.—E. D. Welker Hardware Co. has been incorporated. Capital stock, \$10,000. Incorporators, E. D. Welker, W. Cole, R. A. Kiteley.

Mobile, Ala.—A new enterprise for Mobile has been put on foot by the organization of the Mobile Hardware Co., of which G. M. Luce is president, A. Lewis, vice-president, J. Holcomb Quill, secretary and treasurer, and G. Preston Martin, general manager. The new company will do a general Hardware business, with headquarters on Dauphin Street.

Mart, Tex.—Parmer Hardware Co. has been incorporated; capital stock, \$10,000. Incorporated by C. L. Parmer, C. T. Young, W. A. Findley.

Northboro, Mass.—John Wakefield, formerly of C. B. Frost & Co., Hardware store, has moved to Shrewsbury where he has opened a branch store for the same firm.

West Millgrove, O.—Wm. Stuart has embarked in the Hardware business, putting a stock of goods in the front part of his blacksmith shop.

### Changes and Improvements.

Anderson, S. C.—The Hardware firm of Brock Brothers is soon to be incorporated and converted into a joint stock company under the management of Walter S. Brock, a member of the old firm, and L. L. Hatcher. The name of the new concern is to be Brock Hardware Co.

Grand Rapids, Mich.—F. D. Flye and F. J. Meyer have retired from partnership in the Antrim Hardware Co. M. J. Flannelly and S. H. Beach will continue the business.

Hinsdale, N. H.—H. W. Taylor has purchased the interest of his partner, W. O. Stebbins, in the stove, tin and Hardware business, located in the Stebbins block.

Houston, Tex.—The Bering-Cortes Hardware Co. announce that they are now operating as a corporation, but the management continues the same.

Kansas City, Mo.—The Richards & Conover Hardware Co. has paid \$36,500 for the site of its proposed new building. The property consists of a lot at the northwest corner of Fifth and Wyandotte Streets,

which fronts eighty feet on Fifth and 175 feet, including a fifteen-foot alleyway, on Wyandotte.

Louisville, Ky.—The W. B. Belknap & Co. Hardware, has filed amended articles of incorporation increasing the common stock \$250,000. The total common stock is now \$1,000,000.

Minneapolis, Minn.—A brick Hardware house is to be erected at First Avenue and First Street South. The Mutual Building Co. has purchased through Clarkson Lindley the property at the northwest corner, and the building to be erected on it will be occupied by Janney, Semple, Hill & Co.

Montgomery, Ala.—The firm of Teague, Barnett & Co., wholesale Hardware dealers, after a prosperous career of twenty-five years, have closed out their business, and the well-known firm has passed out of existence. G. W. Barnett, who was a member of this firm during its entire life, has formed a partnership with W. R. Barnett, who has been connected with the same firm for the past ten years, under the style of G. W. Barnett & Son. They are located temporarily in the store adjoining the Windsor Hotel, where they are soliciting business from their friends and former patrons.

Old Forge, N. Y.—Moses Cohen has leased for a year the store of E. F. Abbott and will have his stock of Hardware removed as soon as some slight changes can be made, providing for the accommodation of the post-office in the store.

Presque Isle, Me.—A. M. Smith & Co. have dissolved partnership and Mr. Smith will continue the Hardware business.

Paterson, N. J.—Morton Clark has sold his Hardware store at the corner of Ellison and Main Streets to Nehemiah Vreeland.

Portland, Me.—The wholesale Hardware business of Houghton, Clark & Co., 131 Middle Street, has been sold to Edwards & Walker, of this city. The business will be continued at the old stand until the new store in the United States Hotel building is ready to take the stock.

Reading, Pa.—J. Peter Koch, Hardware dealer, 226 South Ninth Street, has enlarged his store by adding the adjoining room, at 226½ South Ninth Street. He has greatly increased his stock and made a number of improvements.

Roanoke, Ala.—Griffin & Satterwhite have begun the building of a commodious two-story brick annex to their large Hardware and hotel building.

Sidney, O.—F. O. Routson, formerly of this city, has formed a partnership in the Hardware business at Troy.

St. Louis, Mo.—Plans have been prepared for a new ten-story building for the Northeast corner of Fourth Street and Washington Avenue, to be occupied entirely by the Norvell-Shapleigh Hardware Co. This company will succeed the Shapleigh Hardware Co. July 1.

Syracuse, N. Y.—The old-established firm of Diel & Co. has removed from 225 West Fayette Street to 210 South Clinton Street, and consolidated its business with the Syracuse Hardware & Iron Co., where they will conduct a wholesale and retail business in general Hardware and house furnishing goods. Frank Diel is the vice-president and general manager of the Syracuse Hardware & Iron Co., and his two sons, Charles and Alfred, are also associated with him.

### Recent Fires.

Wellsville, N. Y.—Fire in the cellar of Otis & Day's Hardware store caused an explosion which wrecked the rear of the store. Partially insured.

Whitby, Ont.—Fire in Gross & Gringer's Hardware store did \$18,000 damage to the building and stock.

Greeley Center, Neb.—M. Murphy. Partially insured.

Wilson, N. Y.—Perrigo's Hardware store.

### Burglaries in Hardware Stores.

Marietta, Pa.—Stump & Mueller. Loss, \$200.

Bristol, Tenn.—Mitchell-Powers Hardware Co. Loss, \$40.

Columbus, O.—Seeley & Beery, \$10.

Central City, Neb.—W. L. Morris. Loss, \$100.

Eufaula, I. T.—Eufaula Hardware Co. Loss, \$80.

Hopkinsville, Ky.—Gardner, Green & Co., guns, pistols, etc.

Muncie, Ind.—Scott Hardware Co., \$100.

Wayne, Mich.—J. C. Cozadd, \$75.

### Embarrassments.

Marshalltown, Ia.—W. S. Loree, a Hardware merchant, has filed a voluntary petition in bankruptcy in the United States court. He schedules liabilities of \$7,183, of which \$6,747 is unsecured claims owing jobbers, and assets of \$13,700. The stock is put in at \$4,000, accounts at \$2,500, and insurance at \$2,000.

Grand Ridge, Ont.—Reuben Eckert, Hardware merchant, has gone into bankruptcy, and his assets will be ample to pay his debts, amounting to over \$3,000.

Mechanicsburg, Ohio—Judge Heiserman has appointed J. F. Mumma as receiver for the Hardware firm of Legge & Stuart. Mr. Mumma gave bond in the sum of \$15,000, with F. M. Clemans and John C. Sceva as sureties.

New York, N. Y.—The Broderick Supply Co., dealers in heavy Hardware and woodenware, at 44 Rose Street, has made an assignment to Thos. H. Rose. The company was incorporated under New York laws in September, 1893, with a capital stock of \$1,000. Morris Nunan is president and Peter C. Nielsen secretary. The liabilities are about \$10,000 and the assets are not yet known until an inventory is made.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Kokomo, Ind.—The Kokomo Wire-Nail Co. has been formally organized with \$1,000,000 capital stock, headed by A. A. Charles. The company proposes to employ eight hundred men.

Louisville, Ky.—Articles of incorporation have been filed by the Louisville Shovel Co. with a capital stock of \$50,000. The incorporators are J. P. Ouerbacker, D. Davis, H. Klapheke and A. Davis.

Leechburg, Pa.—The Shovel Co., which has located in the Mesta foundry property, is fitting up the plant and will soon be ready to manufacture shovels. This firm will employ 75 to 100 skilled workmen in addition to laboring men.

Meyersdale, Pa.—A new industry for Meyersdale is a lock factory for the manufacture of a lock invented by H. W. Eicher of this place. The factory is equipped with machinery for making 1,000 locks per day, and will employ about twenty hands.

Minneapolis, Minn.—The North Dakota Lignite Stove Co. has been incorporated with a capital stock of \$20,000 for the purpose of manufacturing stoves, ranges and heating apparatus generally for the use of lignite as fuel.

Newark, N. J.—The National Clinometer Co. have had articles of incorporation recorded at the county clerk's office. Its capital stock is placed at \$100,000. The object of the concern is to manufacture clinometers and squares under letters patent obtained by John P. Johns. Incorporators, Clement R. Johns, of Austin, Tex.; Walter M. Annette, of New York City; John J. Berry, of Newark, and William E. Hoyt, of New York City. The office of the company will be at 810 Broad Street.

New Bedford, Mass.—A new industry has just been established in this city, under the firm name of F. D. McGee & Co., located in the old Pierce & Bushnell building. The industry is that of manufacturing door securers for fastening doors independent of lock or key. It is an invention of Mr. McGee, and was patented last October.

Newark, N. J.—The Safety Lock Co. has had articles of incorporation recorded in the office of the county clerk. Its object is to manufacture and sell locks, bolts, keys, etc., and its office will be at 62 Lafayette Street, where Joseph De Mars will act as agent. The capital stock is fixed at \$5,000. The incorporators are John Kleymyer, of Brooklyn, Joseph De Mars, of Newark, and Richard Grant, of East Orange.

Pawtucket, R. I.—At the office of the Secretary of State have been filed the articles of incorporation of the Potter & Johnston Co., of this city, the incorporators

named being James C. Potter, John Johnston and Lyman M. Darling. The capital stock is divided into \$100,000 preferred stock and \$300,000 common stock. This incorporation has been secured to validate an alteration in the form of company engaged in machine manufacture. According to the papers filed the incorporators will engage in the business of manufacturing, buying, selling, operating, using and dealing in machines, machinery tools, implements and appliances of every kind and nature.

Quincy, Ill.—The Weller Pattern Co. has filed its articles of incorporation. It will make stoves and machine patterns. The capital stock is \$8,000. The stock is held by F. S. Weller, John J. Sass and F. J. Frey.

Syracuse, N. Y.—The S. V. Merriman Screen Co. has been organized in this city for the purpose of manufacturing window and door screens. The company consists of S. V. Merriman, G. H. Avery, John J. Laass and Harry B. Smith. A factory has been opened in North State Street.

Savannah, Mo.—Novelty Stove and Mfg. Co. has been incorporated; capital, \$18,600. Incorporators, Lincoln Howard, Benjamin C. Savell, William H. Knizer and others.

Vincennes, Ind.—The Indiana Handle Co. has been organized with a capital of \$20,000 to manufacture and sell "D" and other tool handles.

### Changes and Improvements.

Marietta, O.—The Leidecker Tool Co. are putting a large brick addition to their works on Second Street. The new building will be stocked with steam hammers and other machinery to be used in their business.

New Bedford, Mass.—The details of the great plant of the Atlas Tack Co., which Henry H. Rogers is to build in his native town of Fairhaven, concentrating there all the manufacturing which is now done in Taunton and Fairhaven, have been made public. The building will be 500x220 feet in area, one story and basement, excepting that 40 feet of the front will be two stories in height. The entire floor area will be 5½ acres. The roof will be of the latest design in mill construction, with "sawtooth" skylighting. The second floor, 220x40 feet, will be utilized for office purposes.

New Haven, Conn.—Clark Brothers & Co. of Milldale, are pressed for more room at the bolt factory and will this Summer add to the north side of the main factory building an addition 100x12 feet. During the past three or four years the company's business has greatly increased.

Philadelphia, Pa.—Cooper & Chestnut will build for the Niles-Bement Tool Co. a brick and iron machine shop, 106 x 110 feet, at Meadow and McKean Streets, at a cost of \$12,000.

Pittsburgh, Pa.—Jones & Laughlin are to build a standard steel nail mill with a capacity of 2,000 tons daily.

Philadelphia, Pa.—Extensive alterations and additions will be made to the file fac-

tory of G. & H. Barnett, at 21 Richmond Street, by Charles P. Nesbitt, who will begin work at once.

Reading, Pa.—D. Elmer Dampman, contractor, has taken out a permit for the erection of a new edge tool works, to be located at Second and Buttonwood Streets. It will be three stories in height, of brick and will be 40x100 feet. Dies will also be cast at this plant. As soon as the building is completed, the plant now in operation at Wilmington, Del., will be removed to Reading. About 75 hands will be employed. The Messrs. Sternbergh are proprietors of the new works.

Rutland, Vt.—The contract for building the basement of the new building at the Howe Scale Works has been given to James E. Creed, and H. F. Noyes will erect the building which will be of wood. It is now planned to build an addition to the pattern shop.

Seattle, Wash.—The J. E. Fox Saw Works have moved their up-town store to the factory on First Avenue South. An addition has also been constructed to the factory building for the offices of the firm.

Syracuse, N. Y.—The Syracuse Stove Works Co. is enlarging its plant in South Geddes Street by the erection of a new building, besides the placing of a large amount of new machinery. The building is 65 feet long, 22 feet wide and one story high and is of brick construction. The floors will be of concrete and vitrified brick. The building will be used for what is known among stove manufacturers as japanning. It will be completed June 25 at a cost of \$2,000.

### Miscellaneous.

Detroit, Mich.—Directors of the United States Rubber Co. have elected these officers for the ensuing year: President, Samuel P. Colt; first vice-president, James B. Ford; second vice-president, Lester Leland; treasurer, Chas. R. Flint; secretary, Samuel Norris; general manager, Charles L. Johnson; sales manager, Homer E. Sawyer.

Oswego, N. Y.—At the stockholders' annual meeting of the Oswego Tool Co., Albert N. Radcliffe was elected president and manager; Delos Radcliffe, vice-president, and Chauncey C. Place, secretary and treasurer.

## You buy goods to sell —not to carry on your shelves.

Sargent's Gem Food Chopper is a seller, and it will not stay on your shelves if you let the housekeepers of your neighborhood know that you have it on sale.

**Why?** Because it is one of those articles that a housekeeper wants as soon as she knows of its advantages—the work it does, the time it saves and how exceedingly useful it is. Besides, it is the best Food Chopper made; that you can guarantee.

Sargent's Gem Food Chopper takes the place of chopping bowl and knife. It chops all kinds of meat, vegetables, fruit, crackers, bread, cheese—in fact, everything that has to be chopped; it chops in pieces of uniform size, fine, coarse or medium, as desired; it chops easily, quickly and quietly; is easy to take apart, easy to put together, easy to adjust, easy to clean.

Loucks, *et al.*, a tract of land located in Baltimore and Carroll counties, Maryland, containing 1,169 acres, neat measures, with all the improvements and appurtenances thereto, and will at once engage in the manufacture of powder, dynamite, high explosives and paper of all kinds.

### Changes and Improvements.

Anderson, Ind.—Elk Cycle Co. has decided to go out of business.  
 Burton, O.—Parmelee Bros. sold out.  
 Belmont, N. Y.—Nicholson & Fay dissolved partnership.  
 Ballston Spa, N. Y.—T. W. Nichols succeeds Kerley & Co.  
 Chehalis, Wash.—Dewitt Welton succeeds Wallace Taylor.  
 Clinton, Ia.—George Riggs succeeds H. L. Traub, Main Street.  
 Douglas, Neb.—C. E. Cowles & Son succeed Mathers & Cowles.  
 Dallas, Tex.—B. E. Boren succeeds Edgar Boren.  
 Derry, N. H.—J. F. Paquette removed to Bank Building.  
 Dansville, N. Y.—A. H. Jenks succeeds C. F. Bates.  
 Delphi, Ind.—H. W. Sidenbender gone out of business.  
 Durant, Miss.—Hooper & Morgan succeed Hooper Bros.  
 Fort Wayne, Ind.—Himes & Rosenwinkle, dissolved. Mr. Rosenwinkle has made an assignment.

Greensburg, Pa.—Greensburg Hardware & Supply Co. succeed Shields, Painter & Sloan Co.

Gray, Ia.—Emerson Shelley succeeds T. S. Wilson.

Garwin, Ia.—G. E. Clark, of Clark Bros., has sold out one-half his interest.

Humboldt, Neb.—Skalak & Son succeed Scott & Skalak.

Hagerstown, Md.—E. E. Hinsman, of Milwaukee, Wis., has been appointed by the American Bicycle Co. as superintendent of the factory department of the Crawford Bicycle Works, Hagerstown.

Little Falls, N. Y.—J. H. & B. P. Casler, 549 Main Street, closing out bicycle business.

Lake Mills, Ia.—E. L. Moen succeeds R. W. Lloyd.

Mohawk, N. Y.—R. L. Loucks succeeds Waldo E. Woodcock.

McPherson, Kan.—Temple Bros. succeed W. S. Young.

Middletown, Conn.—The plant and business of the Keating Wheel Co., which has been in the hands of Frederick A. Betts, as receiver for two years has been sold to the Eisenhuth Horseless Vehicle Co., of New York, which will continue the operation of the plant here. The price paid is not stated. The Keating Co. had a capital stock of \$500,000.

New Albany, Miss.—M. M. Kings succeeds Fred. King & Co.

Newton, Mass.—C. F. Pond, Jr., removed to 343 Auburn Street.

Nashua, N. H.—A. C. Pollard, Holman Block, bought out N. W. Tarbell & Co.

Sanborn, Minn.—Piny & Wheelan succeed Posz & Gleason.

Steamboat Rock, Ia.—Cramer Bros. succeed F. H. Stearns.

Tacoma, Wash.—Reaney & White will discontinue.

Tecumseh, Neb.—McDougall & Smith succeed Jolly, McDougall & Smith.

Toledo, O.—The Toledo Automobile Co. has changed its name to the Toledo Motor Carriage Co. This is the company of which F. E. Southard is president, and Charles M. Hall, secretary. Up to this time, there

have been two Toledo automobile companies. The names have occasioned much trouble to both companies, and the incorporated concern made application to the Secretary of State to change its name.

Wichita, Kan.—Musselman Bros. will discontinue.

Wichita, Kan.—The Hockaday Hardware Co. will very materially enlarge their sporting goods department when they move into their new building, which will be about August 1st. They have secured the services of A. J. Musselman, a thorough sporting goods man, who will take charge of that department at once and begin purchasing Fall stock. They ask that all manufacturers of goods in that line send them catalogues.

Williamsport, Pa.—W. R. Watson, who has conducted a bicycle repair shop on Fifth Avenue for many years, has opened a branch shop at 614 East Third Street, of which Frank Witzman will be the manager. All repair work will be guaranteed and attended to promptly.

Worcester, Mass.—James Milligan succeeds Victor Eckberg.

Worthington, Ind.—W. D. Stallcup sold out.

Sales by photograph; two photos cover the line. Many salesmen in Western States are making a good profit by it. Address H. F. BRAMMER MFG. Co., Davenport, Iowa. 145

**TRAVELING SALESMAN**—Traveler wanted for quick-selling specialty, as vest-pocket side line. Address Liberal, care HARDWARE, 275 Broadway, New York. 224

## To Let.

**A FINE FIRST LOFT**, 50 x 50 feet, in centre wholesale Hardware district, New York City. Splendid light, freight and passenger elevator; all conveniences. Special terms to desirable tenant. Address STORE, care HARDWARE, 275 Broadway, New York City. 228

## Capital Furnished Manufacturers.

**ARE YOU** dissatisfied with your present location? Do you need a larger factory? Do you want more capital? If so, write the Banking House of W. R. VERMILYE & Co., 52 Broadway, New York. All correspondence confidential. 227

## For Sale.

**A STOCK OF HARDWARE**. Will average about \$5,000. Building, 30 x 70, 3 floors, brick, for \$5,000. In a live Virginia town. Full particulars given on application. Address J. K. PENDLETON, Clifton Forge, Va. 85

**MANUFACTURING**, Small Hardware, one-half interest, and full management. Established 35 years. Net Assets \$50,000. No liabilities. Eastern city. Principals only. Manager out of health. For full particulars and interview, address Genuine, care HARDWARE, 275 Broadway, New York. 214

## Hardware Business For Sale.

**TO CLOSE A PARTNERSHIP**; in complete running order; daily sales \$110 to \$165; an exceptional opportunity; inspection invited. Address Hardware Business, care HARDWARE, 275 Broadway, New York. 221

## Agency Offered.

**LIVE HARDWAREMEN**—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, 275 Broadway, New York. a

**TO MANUFACTURERS**—Wholesale house with foreign branches and connections is willing to undertake the selling agency of one or two good marketable lines. This is a favorable opportunity for manufacturers to secure reliable representation here in the East and abroad. Ample warehouse facilities. Address WM. SOMERVILLE'S SONS, 68 Pine Street, New York. 225

## Agency Wanted.

**NEW YORK AND VICINITY**—A gentleman now representing a first-class line of Hardware sold by the largest jobbers, would like to add one or more lines of importance for New York and vicinity. Best of references as to experience and ability. Address B. H., care HARDWARE, 275 Broadway, New York. 219

## Agents Wanted.

**TO SELL THE "NULITE"**, our incandescent vapor lamp. Sells almost on sight. An excellent opportunity for the live Hardware dealer, or anyone else who wants to make money. Ask for catalogue and terms. Address CHICAGO SOLAR LIGHT Co., Garden City Block, Chicago, Ill. 116

## Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.

Catalogue and information free.

**STUBER & KUCK,**

Peoria, Ill.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

**WHY IS THE**

**O.K. THE BEST ROTARY  
WASHING MACHINE?**

**BECAUSE**

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

**MAGAZINE HAMMER CO.,** Cor. Broad and Hubbell Sts.,  
UTICA, N. Y. U. S. A.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00    A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25    A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00    B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25    B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 8 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, - 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches.*

FOUR EDITIONS:

D, 240 pages, - - \$1  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**  
" Farers, Apple " **PA**

For Chisels, turn to **CH**  
" Cutlery, " **CUT**

For Iron, turn to **IRO**  
" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

# HARDWARE

John J. Tower, of Tower & Lyon, left on Saturday last by the steamer *Marquette* on an extended trip abroad, visiting the principal cities in Great Britain and on the Continent, expecting to be absent about two months. He was accompanied by his wife and daughter, his son, Rev. W. H. Tower and wife, also Warren M. Tower, making up a party of six, to all of whom we wish one of the pleasantest vacations abroad of the season.

We have hanging in our editorial sanctum through the courtesy of C. F. Ray, of Asheville, N. C., a characteristic photograph of the delegates to the recent Southern Hardware Jobbers' convention and their guests. It is one of the most successful that has been taken of the several conventions, and reflects great credit upon the skilled photographer under whose management it was secured.

H. A. Higgins, the general manager of the Standard Tool Co., Cleveland, Ohio, has been abroad since May 15th, visiting the foreign representatives of his company in the principal cities of Great Britain, and throughout the Continent generally, including France, Germany, Russia and Scandinavia.

Indiana Hardware Co., Indiana, Pa., who are established to do a wholesale and retail business in Shelf and Light Hardware, and also to act as Manufacturers' Agents, are desirous of having all catalogues of the manufacturers to whom this would appeal, with discount sheets and bottom quotations of general Hardware and Hardware specialties.

Our readers will observe in our Hardwaremen's Exchange columns an advertisement of S. L. Wilder, Perth Amboy, N. J., intimating that an opportunity is given in that town for the establishment of a retail Hardware store, as there is no exclusively Hardware store in this town of 19,000 inhabitants, which, according to the census, has increased in population nearly 100 per cent. during the past ten years. Quite an impetus being given to the erection of new buildings has created an excellent demand for Builders' Hardware especially.

During the past two years a number of big contracts for electrical supplies for the Japanese government and for private Japanese firms have been secured by Pittsburgh concerns. Representatives of the Imperial Steel Works, located at Yawatamura, Japan, have lately been in that city and while there placed with the Westinghouse Electric and Manufacturing Co. orders aggregating \$200,000.

Cattaraugus Outlery Co., Little Valley, N. Y., intend running a special train from Chicago to Buffalo on July 22d for the express accommodation of their customers and friends. It is intended that this train shall be one of the fastest limited trains running over the Erie Railroad. The accommodations, it is contemplated, shall be first-class in every respect, and the company will make it a point to look after the comfort and convenience of their customers to whom they extend the assurance that every assistance will be given to find suitable hotel accommodations while at Buffalo, and to furnish them the use of their booth in the Manufactures and Liberal Arts Building, as headquarters while visiting the Exposition. It is certainly a very progressive feature emanating from a very progressive concern.

F. E. Myers & Bro., Ashland, Ohio, to whose Pan American exhibit we made an illustrated reference in our preceding issue, are distributing in connection therewith a lithographic representation of a Rough Rider's hat, which has been made a characteristic feature of their recent advertising, emphasizing the catch line, "Take off your hat to the Myers!" In connection with this single feature, they desire to have a note made of their location in the Stadium Building, Agriculture and Machinery Department, where intending visitors can obtain all information desired in regard to location of other exhibits, attractive and desirable entertainments, care of garments, etc., while making the rounds of the Exposition.

The Pan American exhibit of the Utica Drop Forge and Tool Co., also the Smith & Hemenway Co., New York, may be seen in Section S, Electricity Building, it forming a part of Marland's collective exhibit. Printed matter and catalogues are freely distributed at the booth, and full information given in regard to the productions of these two enterprising concerns.

The enterprising and progressive concern of E. C. Atkins & Co., of Indianapolis, Ind., have decided to locate their new Eastern branch house at 64 Reade Street, New York City, where they will carry a full and complete stock of every kind of Saws and Saw tools manufactured by them, including Circulars, Bands, Cross Cuts, Hand, Wood, Compass, Pruning and other saws. The motto of this leading firm is "Atkins Always Ahead," and on account of their fast growing trade in the Eastern States, they have for some time past felt the need of taking care of this business in better shape, so that the stock which they carry in New York will be a great convenience to their Eastern customers and also enable them to look after their prosperous export trade to better advantage. A cordial invitation is extended by E. C. Atkins & Co. to all of their friends in all parts of the country to make their headquarters in the New York office whenever they are in this city.

Edgar C. Neal, who has for twenty years been at the head of Weed & Co.'s jobbing department, Buffalo, N. Y., has severed his connection with that firm and established an office of his own in the Chapin building, in that city. He will represent some of the largest and best-known manufacturing and jobbing interests in the country, and will be able to furnish his customers with anything needed in the line of machinery and Hardware. Among the firms which Mr. Neal will represent are the W. Bingham Co. and the Lake Erie Bolt & Iron Co., both of Cleveland. Mr. Neal has made many friends during the score of years in which he has been engaged in business, and his known reliability and accommodating disposition will undoubtedly bring him a large amount of business.

On the night of June 20th fire broke out in the Tin Plating Works of the Sturges, Cornish & Burn Co., Chicago, completely destroying that department. The loss is fully covered by insurance. The fire will not prevent their operating their Stamping Works and other departments, or executing orders as in the past, arrangements having been made for the immediate rebuilding of the Tin Plating Works. Meanwhile, a smaller unoccupied plant on the premises will be used for the tinning of such goods as are required for immediate shipment until the new tinning plant is completed.

# HARDWARE

VOL. XXIII.

JULY 10, 1901.

NO. 7.

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in** should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

**HARDWARE PUBLISHING CO.,**

275 Broadway, New York.

L. E. MITCHELL,	President.
A. P. MITCHELL,	Secretary and Treasurer.
HENRY HOPKINS,	Editor.
A. E. BOLLES,	Advertising Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

Business still continues active to a remunerative extent in several directions, the demand for many lines of warm weather requirements being a remarkable one.

The end of the season brings with it a review of the preceding six months most favorable to the possible and probable continuance of the prosperity which has surrounded the Hardware industry for some time past. Prices are fairly well maintained, with stability indicated for the future.

In consequence of the prevailing scarcity of goods in so many important lines, most of the leading manufacturers are still doing a satisfactory business, urgency regarding long-delayed shipments to complete orders helping materially to create such hopeful conditions. As nearly every plant of prominence requires some period of time during July and August for overhauling machinery and storage facilities, predicating increasing production or the using up of slow-moving raw material not of desirable dimensions, the present time in the year is usually deemed the most fortuitous for the purpose; but in the face of a steady demand, orders must be first filled, and the alteration fortnight is indefinitely postponed, hazarding that promptness in deliveries looked forward to in Fall goods. Present requisitions in many lines are pushed forward with commendable activity, the leading manufacturing staples being the most backward in catching up on the requisitions now on the order books.

Among the jobbers the unexpected activity in the commercial circles controlled by their salesmen, interferes with the usual Summer allotment of a two weeks' vaca-

tion, in which all are expecting a participation. It looks in many instances as though vacations will be late in arriving in many establishments; even if some of them don't get lost in the shuffle it will be a wonder, for in the face of working evening hours in the Summer season to keep up with current orders, a natural fear exists that business cannot be expected at any time to be turned down for the sake of a matter of courtesy not usually included in a contract for services.

The belief seems general that the Fall season demand is destined to be of the most generous character, founded on stability in prices and encouraging conditions of wants and a good supply of money for the movement of important crops, the excellent promise of which is noted on every hand in every direction. All these prevailing influences furnish factors of importance on which to ground estimates for Fall requisitions from the manufacturers, and inspire the fear that a full supply of goods for early deliveries may fail in being among the probabilities. Many orders have already been entered for regular lines, the volume of whose sales the past year gives a satisfactory indication of possible requirements; but we so rarely take into consideration the constantly increasing consumption of this growing country of ours, that few dealers order a supply sufficiently large to carry them through the season, and prevent the necessity of large supplementary orders being given at a later date when a specified delivery becomes a problem difficult of solution.

The trend toward a thorough organization of the entire Hardware trade of every State in the Union, is still enjoying a degree of strength in the process of accomplishment, that bids fair to be the most desirable movement the progressive dealers can take an interest in. By a community of interests of so deserving a character, selfishness is eliminated, the interests of all are subserved by a unanimity of effort, steady prices are maintained, shady methods for undue advantage are discouraged and discountenanced, and the pleasure of doing business is so greatly enhanced, without the destruction of a deserved profit, that one would suppose the millenium was about to dawn. May the good work go on, until every one working shoulder to shoulder in this arduous employment, so full of detail and necessitous drudgery, shall receive the rewards which should follow years of active service, of Christian endeavor and honesty of purpose.

## Statistical Studies on Colonial Commerce.

The Chief of the Treasury Bureau of Statistics has just returned from a brief visit to London, Paris, Berlin, Amsterdam and Brussels, where he went for the purpose of making some statistical studies regarding the commerce of European countries, and especially their commerce with, and their development of their colonies.

"I was greatly impressed," said Mr. Austin, "with the interest evinced in colonial questions at all the capitals which I have visited. Each of these five countries has its colonial department or division, with a thoroughly equipped force largely made up of men who have had long experience in the colonies of the countries. In England, the colonial office at the Home Government interchanges, at intervals, its employees, as far as practicable, with the colony, thus obtaining practical and experienced men in the Home Office, and keeping a corps of men in training in the colonies. At the Netherlands, whose colonial work is a matter of pride on the part of every citizen of that country, the head of the Colonial Department has had long experience in Java, the principal Netherland colony, and one which has been eminently suc-

cessful. In France, the Colonial Department is extremely active, obtaining large numbers of reports from its colonial officers and distributing information by a specially organized bureau for that purpose, and in Germany and Belgium equal interest was manifested.

"Everywhere I found great public interest in colonial matters outside of official circles. In London, for instance, there is a Colonial Institute, composed of several hundred ex-officials of the colonies and others interested in colonial matters, which has a library of nearly 50,000 volumes and which is in close working relation with the library of the Colonial Department, also containing 50,000 volumes. The members of the Institute hold monthly meetings for the discussion of matters pertaining to the management, commerce, statistics, and prosperity of the colonies and their commercial relations with the mother country. At Paris, there is a colonial organization, with about 5,000 members, some of whom have had experience in the colonies, others are merchants and business men desiring to keep in constant touch with business conditions and opportunities in the colonies, and still others who are students of colonial subjects from an economic standpoint. In Germany, although their colonial system is young as compared with those of England, Netherlands or France, the Colonial Association numbers over 20,000 members, scattered throughout the empire, some of whom are officers and ex-officials, others connected with the army and navy, and many others who are interested in the commercial and agricultural development of the colonies.

"The study of colonial conditions and development of the colonies, both as to products and commerce, is encouraged by all the governments which control territory of this character. The French Government maintains an educational institution devoted exclusively to colonial studies and the training of men for the colonial service; admission to its classes is obtained through competitive examinations, the term of study is three years, and the instructors are men of high standing both in colonial experience and in the study of economics. While the primary object of this institution is to educate men for the colonial service, those who prefer at the end of their term to devote their efforts to the commercial and agricultural development of the colonies, may do so. The Netherlands government also maintains a training school, similar in general character and the English government has a somewhat similar system for the training of men for service in India and the colonies.

"In nearly all of the countries in question, there are excellent and interesting colonial museums, devoted to the exhibition of not only the products of the colonies, but also the articles required by their population, and in many cases they are accompanied by admirable, statistical statements showing the growth in production of the principal articles, and the growth in exports from, and imports into, the colonies. Each of the Governments maintains a statistical service by which the commerce of the colonies is carefully studied and the share which the mother country supplies of the imports, or receives of the exports, carefully tabulated, the receipts and expenditures of the colonies and of the Home Government on account of them recorded, and the growth of agricultural, commercial and educational conditions noted.

"Especial attention is given in all cases to the ability of the colony to meet the commercial wants of the mother country. Countries which do not produce within their own borders the foodstuffs and raw materials required by their population, encourage the production in the colonies of the articles thus required at home, while the countries which produce their own foodstuffs or raw materials, look to the colonies for the tropical products which they cannot produce at home and encourage the production of those articles in the colonies and their distribution in the mother country. The investment of home capital in the colonies is thus encouraged through the

assurance given that the products of those colonies will find a ready market in the mother country, the manufacturers and producers of the mother country are, in turn, assured of an enlarged market in the colonies through the increased consuming power which accompanies their increased production and sales, and the general prosperity of the colonies through increased production, larger markets and better roads, railways and improved educational facilities, is thus assured."

## PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

### Patents Expire June 3, 1901.

- 299,529. LIFTING-JACK, H. J. England, Falls Church, Va.
- 299,530. SHOVEL, E. L. Fenerty, Halifax, Nova Scotia, Canada.
- 299,531. SNATCH-BLOCK, Thos. R. Ferrall, Boston, Mass.
- 299,560. MACHINE FOR FILING SAW-TEETH, H. Lutts & F. W. Lutts, Malden, Mass.
- 299,576. CARPET-STRETCHER, E. F. Persons, Westfield, N. Y.
- 299,580. HAIR-CLIPPER, J. K. Priest, Nashua, N. H.
- 299,633. DOOR-KNOB ATTACHMENT, W. H. Flinn, Nashua, N. H.
- 299,635. CARPENTER'S GAUGE, G. S. Forrest, Concord, N. H.
- 299,669. AUTOMATIC BALL SAFETY-FAUCET, H. C. Montgomery, Cleveland, O., assignor to A. Romeau, same place.
- 299,699. HANDLE FOR CROSSCUT-SAWS, A. Uren, Seattle, Wash.
- 299,712. FASTENER FOR MEETING-RAIL, OF SASHES, R. Adams, Southwark, England.
- 299,738. CORKSCREW, C. Chinnock, New York, N. Y., assignor to J. L. Hyde, same place.
- 299,757. WEIGHING-SCALE, Napoleon De Brul, Cincinnati, Ohio.

### PATENTS ISSUED JUNE 4, 1901.

- 675,440. SASH-PULL AND PICTURE-HANGER, H. W. Downing, Oakland, Cal.
- 675,446. MOWER-KNIFE GRINDER, H. J. Martin & H. S. Campbell, Chicago, Ill., assignors to Whitman & Barnes Mfg. Co., Akron, O.
- 675,449. COMBINED MOP HEAD AND WRINGER, B. W. Smith, Arverne, N. Y.
- 675,457. PRICE-DENOTING SCALE, D. Walker, Maitland, Canada.
- 675,503. SPIRIT-LEVEL, Calvin M. Verrill, Oakland, Cal.
- 675,533. DIVIDED PLANE, H. A. Verge, Stoughton, Mass., assignor of one-half to G. E. Blecker, same place.
- 675,605. SAD-IRON, H. L. Meyer, Festus, Mo., assignor of three-fourths to C. E. Miller, A. W. Armbruster and F. Sewald, same place.
- 675,635. SELF-CLOSING FAUCET, J. W. Lyon, Providence, R. I.
- 675,672. SPRINKLER, W. M. Potter, Syracuse, N. Y., assignor to E. C. Stearns & Co., same place.

## Aluminum Nails.

After many unsuccessful experiments and trials an alloy of aluminum has been made with which nails, staples and tacks can be made to compete with copper. Among other advantages claimed for the new material is that it is not affected by the weather and will not deteriorate. It is to be noticed that this quality should recommend the nails for use in laying roofs, lining tanks, etc., and also that, as the alloy is non-corrosive and non-poisonous, the new nails ought to find favor among makers of refrigerators and other articles used for food storage. When the difference in point of number and weight is taken into consideration, it is seen that aluminum nails are about 4 cents a pound cheaper than copper nails. It is not intended to put them in competition with ordinary steel nails.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

#### Books of New Jersey Corporations to be Kept Within The State.

QUESTION: I am the secretary of a New Jersey corporation and should like to be informed whether I am required by law to keep the books of the company within the State New Jersey. My office is in New York, and most of the business of the company is transacted there, and it would be very inconvenient if I were obliged to keep the books of the company in the New Jersey office.

REPLY: By a recent amendment to the corporation law of New Jersey, the stock book and transfer book of every corporation organized under the laws of New Jersey are required to be kept in the regular office of the company, in charge of their agent within the State. In the annual report it is compulsory upon the officers making it to state under oath that the stock and transfer books of the company have been continually at their office, within the State of New Jersey. The penalty for a failure to make the report is a fine of \$200. The law imposes a further penalty for this omission in that it disqualifies all the then directors from holding office for the ensuing year.

#### Payment of Premiums and Certain Kinds of Insurance Policies.

QUESTION: Some years ago I took out two small insurance policies on my own life. One policy was for \$50, and the other for \$100. I have paid my premiums regularly, and now the premiums I have paid in amount to more than the sums for which I am insured. Must I continue to pay premiums on these policies in order to be entitled to the principal sum at my death?

REPLY: Whether or not you must continue to pay premiums on these policies depends upon the kind of policies you hold. If the policy is what is known as an "industrial" in some companies, if you do not continue to pay your premiums, your policy will lapse even in a case such as you describe, where you have already paid in your premiums, a sum exceeding the principal of the policy. If, on the other hand, your policy is what is known as a paid-up policy, or a policy entitling you to the issuance of a paid up policy at a certain time, when this time arrives you would no longer be obliged to pay premiums. You should write the company in which you are insured and ask them what offer they will make you on your policy. If they will not make you a cash offer for your policy, it is not unlikely that upon the surrender of your present policy, the company will issue to you a paid-up policy for an amount probably somewhat less than your present policy. If this is done, you would no longer be obliged to pay premiums.

#### Negligence of Fellow Servant.

QUESTION: Some time ago my son, a boy of fifteen years of age, obtained employment in a large factory in New York State. He was directly under the foreman, who, on occasions when the factory was short of hands, would take hold and help in the work. On one occasion the foreman was working a machine and, although my son was standing right next to him with his back to the foreman, engaged in his work, the foreman suddenly started his machine without the slightest warning, and my boy was injured for life. Can my boy recover damages against his employer for this injury?

REPLY: To answer your question, it is necessary to determine whether or not the foreman whose negligence caused the injury to your boy was a fellow-servant with your son. As a matter of law, a master is not liable in damages to a

servant injured through the negligence of a fellow-servant. If, therefore, this foreman must as a matter of law be considered as the co-servant of your son, neither you nor your son would have any cause of action against the master. It was held in the case of Neubauer vs. The N. Y. etc., R. R. Co., 101 N. Y., 607, that a foreman is a co-servant with the workman over whom he acts as foreman. Unless, therefore, you can show that this foreman was an incompetent man and that the master employed or retained him knowing him to be incompetent for the position, we are of the opinion that your son has no cause of action against his employer.

#### Annual Report of a New York Corporation.

QUESTION: Last year a New York corporation, of which I am a director, filed its annual report as usual at the proper time. The secretary of the company was away on business at the time, so the president of the corporation alone signed the report and sent it to the Secretary of State for filing. I was in some doubt at that time as to whether a report so signed by the president alone was sufficient, but I was assured that it was all right and so thought no more about the matter. A creditor has since threatened to sue me as a director of this company because he says no report was filed. We hold the receipt for the report, so that I know it was filed. Could any individual action be brought against me in a case of this kind?

REPLY: It has been held by the Courts of this State that an annual report is not a proper report when signed by the president alone. It has also been held that as such a report is defective, the corporation law of this State is not complied with by the filing of a report signed by the president alone, and that if no other proper report is filed the company and its directors are in the position of having failed to file the annual report required by law. We are therefore of the opinion that if your creditor has such a claim against your company, for which, if no report has been filed, he could have brought suit against the directors individually, he would, under the circumstances of this case, have a cause of action against the directors individually.

#### Development of the Hammer.

Tracing the development of the hammer, *The International Monthly* says: "Man's first tool was the uplifted hand grasping a stone, and from this came, after many years, the hammer. As heavier blows became necessary the hammer grew in size, until it was operated by machinery in the form of the tilt or helve hammer. When steam succeeded water as a motive power, a steam cylinder replaced the tripping cam, but the first half of the past century had nearly expired before the original form of this tool was at all changed by James Nasmyth's invention of the upright steam hammer. Since then the falling weight of this design of tool has gradually been increased from a few hundred pounds up to 100 and even 125 tons; but excepting the smaller sizes, up to 25 tons, it has since 1890 been superseded by the hydraulic press, which, by its own slow motion, produces a more thorough working of the metal. Presses have grown until the capacity of 14,000 tons was reached in 1893, requiring a 15,000 horse-power engine to drive it. Such a tool, with its accompaniment of 200-ton electric cranes for handling the work underneath, is capable of forging ingots over 75 inches in diameter and weighing more than 250,000 pounds. This whole plant, costing over \$250,000, was not projected without an adequate understanding that it was to meet the commercial demands of many years to come, and industrial developments, great as they have been, have not as yet called for anything that has tasked its full capacity."

Statistics show that women live longer than men. For instance, in Germany only 413 out of 1000 males reach the age of fifty years, while more than 500 out of 1000 females reach that age. In the United States there are 2583 female to 1398 male centenarians. In France, of 10 centenarians 7 are women and only 3 men. In the rest of Europe, of 21 centenarians 16 are women.

## CONSULAR COMMERCIAL COMMENTS.

### TRADE WITH MALTA.

I would call the attention of our manufacturers to the advisability of drummers calling at Malta. Already the demand for our goods is increasing, but this is not due to the presence here of personal representatives of our houses. Many American firms are in the habit of sending drummers to many countries throughout Europe, but as yet they have completely ignored these islands. With one exception (and in this case the best results were attained), I have not heard of or seen an American drummer during my stay here, nearly four years. I am prompted to make this suggestion from the fact that for the past few weeks, representatives of English and German firms have been at work here and have secured large orders. Why should not American agents do equally as well? Catalogues and price lists are useful, and from the large numbers that I have received and distributed, much business has resulted; but not nearly as much as if personal representatives had been here. Many American drummers travel in Italy; it is an easy matter to reach Malta from that country, there being frequent steamship connection from Genoa, Naples and Sicilian ports. Those having Adriatic ports in their itineraries will find it very easy to secure passage from here to those points. There is also frequent steamship connection with Alexandria, Tunis, Constantinople and other places. The direct communication which Malta now has with New York by the Mediterranean Steamship Co. is a great factor in the increase of our trade here, and should be taken advantage of. Ships are dispatched regularly from New York, the voyage taking about twenty days (much less than when goods are sent via English and German ports), and freight rates are lower.

There is a chance here for our Hardware, oils and paints, canned goods, hats (especially straw hats), stationery and many other lines of goods. There are several banking houses of good standing, and duties upon imported goods are light, being at present confined to food stuffs and cattle. Anyone speaking English or Italian can do business here.

JOHN H. GROUT, Consul.

MALTA, May 2, 1901.

### SHIPPING GOODS TO MALTA.

The merchants of Malta have recently been making many complaints at this consulate of the way in which American shippers disregard instructions in forwarding goods. In bringing this matter to the attention of our merchants and exporters, I desire to say that such treatment serves to discourage Maltese buyers, and will ultimately result in a decreased demand for American goods. There is but one direct means of communication between the United States and Malta, and that is the Mediterranean and New York Steamship Co. This is an old line, and must be well known to shipping agents in New York and other American cities. A little over two years ago, this company established a branch line between Malta and New York. Since then, owing to lower freight rates and lessened liability of damage (there being no necessity of rehandling goods), the demand for United States manufactures has been steadily increasing. I cite the following as examples of the complaints received:

One of the local merchants had been buying iron in different shapes in the United States. Some time ago, he wrote to the American firm with which he had been dealing to ship via the direct line. Instead of complying with this request, the managers replied that inasmuch as they were on the field, they must be allowed to ship as seemed best to them. The

goods were sent by the roundabout way of Hamburg, whence they were transshipped to Malta. To the Maltese purchaser, this meant higher freight charges and considerable loss of time.

Again, a gentleman here ordered a launch from the United States. Instructions were cabled to send it by the direct line. The manufacturer, being located in the central part of the United States, and not knowing the means of shipment from New York, wrote to a shipping firm in that city for information. He was told that there was no direct line from New York to Malta. Yet, at that time, as at present, vessels were being regularly dispatched to Valletta. Instead of carrying out the cabled instructions and marking the launch "care of Mediterranean and New York Steamship Co.," which would have guaranteed prompt delivery, the manufacturer forwarded the boat through the shipping firm above mentioned via Hamburg. Had it been sent by the direct line, as ordered, the cost would have been about \$75, including insurance, and the boat would have arrived here in about twenty-three days. By the route selected, it reached Malta fully a month later and the cost of freight, which did not include insurance, was nearly double.

These are but two of the many cases that have been called to my attention. I have been informed by one merchant that unless he can have his goods sent him according to instructions, he will have to place his orders elsewhere. In a place like Malta, where very small margins of profit are the rule, freight rates and time are important considerations in the purchase of goods. In my desire to see a constant increase in the sale of our wares here, I have again and again cautioned our merchants to be sure and select the direct line in making shipments. It is somewhat discouraging to see this advice disregarded.

In conclusion, I would also state that complaints have been made of the way in which some of our firms pack their goods. I know of one shipment, for example, of clocks in fancy, light, cast-iron frames. On their arrival, almost all were found to be broken. They had been packed too closely and were not properly protected. It is only fair to say, however, that these goods were shipped via Hamburg, and perhaps the rehandling at that port was responsible for the breakage.

JOHN H. GROUT, Consul.

MALTA, April 25, 1901.

### SHIPPING HINTS FROM GERMANY.

Another point one of my informants laid stress on was the packing of our goods; the greatest precaution should be used in this regard. Care should be taken to prevent breakage and no old or damaged cases should be used. As the customs duties are levied here on the gross weight, less a certain percentage for tare, the advantage of lightness in packing is essential. Manufacturers who ship goods to this country should thoroughly acquaint themselves with the German tariff, and pack their goods in such a manner as to save the purchaser trouble and useless expense. For instance, a much higher duty is charged on nickel-plated iron than on cast-iron stoves. American shippers of stoves will therefore act wisely if they separate the nickel-plated parts and pack them in one case and the heavy iron parts in another, so as not to have the receivers pay the higher duty on the entire weight. The same is true of many other articles.

CHARLES NEUER, Consular Agent.

GERA, April 11, 1901.

### Uses of Aluminum.

A paper read at the Franklin Institute, Philadelphia, by J. A. Steinmetz, on "Aluminum," considered practically in relation to the arts and sciences, had this among other things to say: Upon the use of aluminum in the metallurgy of steel we will not dwell, save to briefly remark that for this purpose alone many hundred tons are annually consumed. It is added to molten steel in proportion of a few ounces to a ton, in the making of ingots and billets. Larger tonnages are treated in the process of making steel castings by adding the aluminum to the molten mass before pouring. It has been found of advantage to insert small scraps of aluminum in the corners and cores of a casting mould. Tons of aluminum are yearly used for the making of patterns. The men at the benches can mould more forms in a given time and with less fatigue.

The patterns, weighing but one-third as much as brass, can be handled and stored more readily and cheaply, while the express charges upon return of patterns are greatly reduced. To-day aluminum is cheaper than copper, considered bulk for bulk. Copper is three and one-third times heavier than aluminum. This should open many channels of new applications for aluminum. One thing that has figured seriously to the disadvantage of aluminum, and, indeed, has precluded it from many excellent fields of use, is the lack of a good, cheap, easily worked and permanent solder. The chief cause of the lack of success is the solder mashing, and making a rough dirty seam. If we desire to manufacture a given object of metal, we can make it cheaper in aluminum than in anything else excepting iron, lead or zinc, to which might be added in composite metals, tinned and galvanized iron. The middle of the twentieth century will see steel and aluminum standing side by side as the most useful of the useful metals. Its greatest competitor will be tinned and galvanized iron. A most excellent use for aluminum is found in the making of steam-jacketed kettles and cauldrons for boiling syrups, fruit juices, honey and wax, as well as for acid work, for which the peculiar chemical properties of the metal specially adapt it.

In the electrical field aluminum is forging ahead rapidly into significant prominence. Comparative tests are now being made in the Chicago Fire Alarm Service between copper wire and aluminum.

Aluminum powder and thin beaten leaf is now largely used. It has found an excellent use as a mixture for making photographic flash-lights, and in printing and bookbinding. It is also mixed as a paste for ink for printing cotton tinsel fabrics for Oriental trade.

### National Weights and Measures.

The United States Treasury Department has just issued an extremely valuable list of the weights and measures of all the nations of the globe, with their American equivalents. The names on the list, so odd to American ears, the strange and arbitrary weights and measures for which the foreign denominations stand, will interest many besides Americans engaged in foreign trade.

The list of weights and measures, the names of the countries in which they are used and their American equivalents follow:

Almude (Portugal), 4.422 gallons.  
Ardeb (Egypt), 7.6907 bushels.  
Arobe (Paraguay), 25 pounds.  
Arroba, liquid, (Cuba, Spain, Venezuela), 4.263 gallons.  
Arshine (Russia), 28 inches.  
Artel (Morocco), 1.12 pounds.  
Baril (Argentine Republic and Mexico), 20.0787 gallons.  
Barrel (Spain, raisins), 100 pounds.  
Berkovets (Russia), 361.12 pounds.  
Bongkal (India), 832 grains.

Bouw (Sumatra), 7,096.5 square metres.  
Bu (Japan), 0.1 inch.  
Caffiso (Malta), 5.4 gallons.  
Candy (India, Bombay), 529 pounds.  
Cantar (Morocco), 113 pounds.  
Catty (China), 1.333 1-3 (1 1-3) pounds.  
Centaro (Central America), 4.2631 gallons.  
Chih (China), 14 inches.  
Joch (Austria-Hungary), 1.422 acres.  
Ken (Japan), 6 feet.  
Klafter (Russia), 216 cubic feet.  
Koku (Japan), 4.9629 bushels.  
Korree (Russia), 3.5 bushels.  
Kwan (Japan), 8.28 pounds.  
Last (Belgium and Holland), 85.134 pounds.  
Last (Germany), 2 metric tons (4,480 pounds).  
Last (Prussia), 112.29 bushels.  
Last (Russian Poland), 113/8 bushels.  
Last (Spain, salt), 4,760 pounds.  
Li (China), 2,115 feet.  
Load (England, timber), square, 50 cubic feet, unhewn, 40 cubic feet; inch planks, 600 superficial feet.  
Manzana (Costa Rica), 15/8 acres.  
Marc (Bolivia), 0.507 pound.  
Maund (India), 827 pounds.  
Mil (Denmark), 4.68 miles.  
Milla (Nicaragua and Honduras), 1.1493 miles.  
Morgen (Prussia), 0.63 acre.  
Oke (Egypt), 2.7225 pounds.  
Oke (Hungary and Wallachia), 2.5 pints.  
Pic (Egypt), 41 1/4 inches.  
Picul (Borneo and Celebes), 135.64 pounds.  
Pie (Argentine Republic), 0.9478 foot.  
Pie (Spain), 0.91407 foot.  
Pik (Turkey), 27.9 inches.  
Pood (Russia), 36.112 pounds.  
Quarter (Great Britain), 8.252 bushels.  
Quarter (London, coal), 36 bushels.  
Quintal (Argentine Republic), 101.42 pounds.  
Sun (Japan), 1.193 inches.  
Tael (Cochin China), 590.75 grains. Troy.  
Tan (Japan), 0.25 acre.  
To (Japan), 2 pecks.  
Tonde, cereals (Denmark), 2.84783 bushels.  
Tondeland (Denmark), 1.36 acres.  
Tsubo (Japan), 6 feet square.  
Tsun (China), 1.41 inches.  
Tunna (Sweden), 4.5 bushels.  
Tunnland (Sweden), 0.22 acres.  
Vara (Argentine Republic), 34.1208 inches.  
Vedro (Russia), 2.707 gallons.  
Vergees (Isle of Jersey), 71.1 square rods.  
Vlocka (Russian Poland), 41.98 acres.

### An Oriental Protest.

A Chinaman protests against the idea that his country stands in need of "civilizing." He says, "Healthy toil, sufficient leisure, frank hospitality, a content born of habit and undisturbed by chimerical ambitions, a sense of beauty fostered by the loveliest Nature in the world, and finding expression in gracious and dignified manners where it is not embodied in exquisite works of art—such are the characteristics of the people among whom I was born. Does my memory flatter me? Do I idealize the scenes of my youth? It may be so. But this I know, that some such life as I have described, reared on the basis of labor on the soil, of equality and justice, does exist and flourish throughout the length and breadth of China." Fortunately he cannot accuse us of trying to force our ideas of civilization on the Flowery Kingdom. But the reproach holds against the other Powers.—*N. Y. Commercial.*

## ARK. RETAIL HARDWARE DEALERS' ASS'N.

The second annual meeting of the Arkansas Retail Hardware Dealers' Association was held in Hot Springs, Ark., on the 19th and 20th ult. Those present at the meeting were as follows:

E. W. Horne, Forrest City; J. M. Pitman, Prescott; E. E. Mitchell, Morrillton; I. P. Rudolph, Arkadelphia; W. M. Graham, Clarendon; R. P. Graham, Fordyce; H. E. Kyler, Eldorado; W. A. Jackson, Dardanelle; J. F. Maxey, Ozark; J. P. Simpson, Malvern; P. J. Tidwell, Buckner; J. A. Plummer, Marianna; W. L. Babcock, Hot Springs; Frank Stearns, Hot Springs; Mr. Whittington, Hot Springs; Hamp Williams, Hot Springs; T. G. Evans, Hot Springs; Harry Vaughan, Hot Springs; Maurice Williams, Hot Springs; Dickerson, Hot Springs; R. F. Roys, Russellville; T. B. Stewart, Newport; D. L. Graves, Arkadelphia; K. G. McRae, Hope; Mr. Wingfield, Hope; George R. Belding, Hot Springs; Julian C. Brown, Hot Springs; D. G. Fones, Little Rock; J. Van Dokkum, Little Rock; W. A. Cook, Little Rock; J. H. Martin, Little Rock; Mr. Lyons, Little Rock; Mr. Hayes, Little Rock; Mr. Bishop, Little Rock; Mr. Carrington, Little Rock; J. H. Boicourt, Little Rock; Mr. Gladding, Memphis, Tenn.; Mr. Jackson, Indianapolis, Ind.; M. L. Corey, Argos, Ind.

A number of the members were accompanied by their wives.

The meeting was called to order at 2 p. m. on the 19th, President Horne in the chair. The opening prayer was offered by Rev. Julian C. Brown, of the Methodist Church.

President Horne introduced Hon. George R. Belding, Mayor of Hot Springs, who referred to the position that the Hardware dealers in Arkansas and other States took as regards improvements and progress. He, in behalf of the citizens of Hot Springs and the local members, extended a hearty welcome to the city. J. M. Pitman in a happy vein responded and in behalf of the association accepted the many courtesies offered to the members during their stay.

President Horne in his annual address reviewed the steps taken to bring about the organization, and the success it was meeting, and said that much good to the members and the trade must result from it.

Secretary Plummer in his report showed the membership on June 13, 1900, was 40. He had since received applications for membership, duly indorsed, of 14 dealers, thus making the membership 54, an increase of 33 per cent. His financial report showed a total collection of \$185 and disbursements of \$53.75, with bills to be allowed at this meeting amounting to \$70.25, leaving a balance in hand after paying expenses of \$60.50.

M. L. Corey, of Argos, Ind., secretary of the National Retail Hardware Dealers' Association, addressed the meeting. He outlined the work undertaken by the National Association and argued the necessity of all State associations joining it. His address was well received, and he made it plain that it was the duty of the retail dealers in Arkansas to join an association, and convinced the most skeptical that the State Association should become members of the National. At the close of Mr. Corey's address and after some discussion by the members, the following resolution, introduced by John M. Pitman, of Prescott, was unanimously adopted:

*Resolved*, That the Arkansas Retail Hardware Dealers' Association become members of the National Retail Hardware Dealers' Association.

The chair appointed the following Nominating Committee: W. M. Graham, W. A. Jackson, J. P. Simpson, J. H. Boicourt and R. F. Roys. T. G. Evans was appointed sergeant-at-arms.

At the suggestion of Mr. Corey the chair appointed a committee of two to attend to questions for the Question Box and to designate what questions should be discussed only in executive session. The chair appointed J. F. Maxey and J. P. Rudolph. On motion the association adjourned to convene Thursday, June 20, at 8.30 a.m.

### SECOND DAY'S SESSIONS.

Harry Vaughan, of Babcock Hardware Co., Hot Springs, notified the association that the Committee of Arrangements had arranged for a hop and social at the Arlington Hotel, and extended a hearty welcome to the members and visitors. John H. Martin, of the Martin Arms Co., of Little Rock as chairman of the Little Rock delegation, invited the association and its visitors to join them in a tally-ho party, and at the same time requested the association to hold its next meeting in that city.

An interesting and instructive paper with the title "The Steps Necessary to Make a Success of the Hardware Business," was then read by E. E. Mitchell, of Morrillton.

At the conclusion of Mr. Mitchell's address the following resolution was introduced, and its passage recommended by the Committee on Resolutions:

*"Resolved*, That the definition of who is a retail Hardware dealer, as outlined by the by-laws of the National Retail Hardware Dealers' Association be adopted as one of our by-laws."

The association adjourned until 2 p. m.

### AT THE AFTERNOON SESSION

the Nominating Committee reported the following selections:

President, Jno. M. Pitman, Prescott; First vice-president, J. F. Maxey, Ozark; Second vice-president, T. B. Stewart, Newport; Secretary-Treasurer, J. A. Plummer, Marianna; Members of Executive Committee for two years—Hamp Williams, Hot Springs; J. H. Boicourt, Little Rock; J. W. Lee, Fordyce.

The chair appointed W. A. Jackson and W. M. Graham tellers. Upon the vote being taken the above officers were unanimously elected. Mr. Pitman, upon taking the chair as president, thanked the association for the honor conferred and made a sharp and pointed address, stating that his idea of the association was that it was strictly a business association, and that he hoped, with the assistance of his brother officers and the members, to make the organization a strong one and one through which many benefits would come to the retail Hardware dealers of Arkansas.

On motion the Membership Committee was made to consist of five members, and its duties to assist the officers in procuring new members for the association.

The president appointed the following standing committees:

Membership Committee—D. E. Watson, Hamburg; C. T. Rosenthal, Hayesville; W. A. Jackson, Dardanelle; K. G. McRae, Hope; D. H. Miller, Van Buren.

Grievance Committee—J. A. Plummer, Marianna; E. W. Horn, Forrest City; W. M. Graham, Clarendon.

Committee on Fraternal Relations—I. P. Rudolph, Arkadelphia; W. B. Pillow, Helena; F. L. Curfman, De Queen.

Committee on Transportation—F. C. Stearns, Hot Springs; J. H. Boicourt, Little Rock; F. B. Gregg, Little Rock.

Programme Committee—E. E. Mitchell, Morrillton; W. L. Babcock, Hot Springs; R. P. Graham, Fordyce.

On motion the president was appointed a delegate to the National Association.

## QUESTION BOX.

A number of the questions from the question box were read, and the discussions participated in by a large percentage of the members. Among the questions were the following:

"What do you think of the new law against range, vehicle and other peddlers?"

"What is the best plan to be sure that a salesman puts all the cash he receives in the till?"

"Is the giving of premiums for purchases advisable, and if so, what is the best method?"

"Is the distribution of calendars and souvenirs a judicious system of advertising? If so, what is the best method of distribution?"

On motion a committee, consisting of J. A. Plummer, D. L. Graves and W. A. Jackson, was appointed to draft resolutions of thanks to the citizens of Hot Springs, the local Committee on Arrangements, the local membership, the Arlington Hotel, the several railroads and the local press for favors shown, and to the Little Rock delegates for favors and invitations extended the association.

On motion M. L. Corey, secretary of the National Retail Hardware Dealers' Association, was by a rising vote tendered a vote of thanks for his presence at the meeting and the assistance rendered by him. On motion a vote of thanks was tendered the retiring president, E. W. Horne. The next meeting will be held at Little Rock, Ark., on the third Wednesday in June, 1902.

### Pennsylvania Wholesale Hardware and Supply Association.

The second quarterly meeting of the Pennsylvania Wholesale Hardware and Supply Association was held in Reading, Pa., on Thursday, June 20, and was an extremely successful affair. The following cities were represented at the gathering by the houses as below: Bittenbender & Co., Foote & Shear Co., Charles B. Scott and Scranton Supply & Machinery Co., Scranton; C. Morgan's Sons, Phelps, Straw & Co. and the Pennsylvania Supply Co., Wilkesbarre; Bright & Co., John H. Obold & Co., Stichter Hardware Co., and Bard, Schlott & Co., Reading; Reilly Bros. & Raub and Steinman Hardware Co., Lancaster; George Krause & Co., Lebanon; C. Dreisbach's Sons, Lewisburg; Hazleton Machinery & Supply Co., Hazleton; L. C. Thompson, Pottsville; A. J. Roat, Kingston.

The organization includes, besides the above, practically all the substantial jobbing Hardware houses of Eastern Pennsylvania, several of whom were not able to be present at the convention, but who have joined the organization, and have announced themselves as heartily in sympathy with its objects. T. James Fernley, Secretary-Treasurer of the National Hardware Association, was present at the business sessions, also the following representatives of manufacturing interests: George Koon, of Henry Disston & Sons, E. T. Fraim, of the Keystone Lock Works, and C. O. Dreisbach, of Sidney Shepard & Co.

The sessions of the convention were held in the Mineral Spring Inn, a suburban hotel convenient to the city. J. M. Kemmerer, the president of the Association, called the meeting to order, H. L. Raub officiating as secretary.

At the afternoon session T. James Fernley made an excellent address bearing on the general lines of organization work. General discussion followed. It was decided that the matter of cutting prices of Cut Nails especially, be transferred from the secretary to the Price Committee. Mr. Fernley presented some prices that are now maintained by the Philadelphia jobbers, and his remarks upon the same elicited general discussion. The secretary was instructed to send each member of the Association a copy of these prices.

A vote of thanks was extended to the members of the organization from Reading for their generous hospitality. Mr.

Fernley, in behalf of the Philadelphia jobbers, invited the Association to hold its next meeting in Philadelphia. The invitation was unanimously accepted, and the time of meeting was fixed for Thursday, September 19.

### Harmless Cutlery For Lunatics.

Cutlery for lunatics was recently advertised for by the British Admiralty office, and it brought to light some unusual cutlery that, while made regularly in Sheffield for the past twenty years or more, is but little known. The illustrations represent two types of knives and one type of fork. The knives have perfectly dull, round blades, with a small cutting area about an inch long, situated in such a way that it cannot be used except for the purpose intended. The fork

HARMLESS CUTLERY FOR LUNATICS.

terminates in a small round ball, on which there are three prongs about half an inch long. The idea in this unique cutlery, of course, was to devise knives and forks that could not be used as instruments of attack upon attendants, nor for self-mutilation. Large quantities of these knives and forks are annually sent to Australia for use in the asylums there.

### Specialization.

European merchants and manufacturers in seeking plausible and practical reasons for the supremacy of the United States in so many regards, overlook one vital point which is involved in the educational training in the United States. Here every tendency is toward specialization. Of late years this powerful but invisible pressure toward specialization has developed a high order of business talent among the young men. American youth are full of hopefulness and enthusiasm. Their hands are not tied by tradition. Their home training and education are different. There is a freedom from restraint in home life, democratic education, and a companionableness and confidence that generates a force of administrative ability not found among young men in some other countries. These young men become naturally originators, and there are no older heads who know it all, or who look down upon them for being young, to sneer at them or disparage their efforts or propositions.

To many Europeans this mental freedom may not amount to much, but when studied at short range it is found to explain a great deal of the extraordinary resourcefulness of the American people.

There is an army of young business men coming to the front in the United States, who will speak and act with an energy and enthusiasm in the coming decade that will make their influence felt throughout the world.—*Implement Age*.

A Russian genius, according to reports, has dealt a blow to the whip trade by designing a harness with an electric attachment, whereby the driver of a horse, by "pressing the button," may give the animal a shock that will rouse him to the required pace. And, the report adds, the shock is beneficial to the horse's health.

### Danger Signals in Credits.

It is remarkable how some customers pay their accounts with one firm and how lax they are in settlements with others. A few days ago an order was received from a dealer in New York State who gave two references. One stated that the party in question had been dealing with them for five years or more, was satisfactory in his accounts, and that they extended him a liberal line of credit and considered him good for his wants, was conservative and used good judgment in buying. The other party referred to stated almost the opposite, by saying that although the applicant had been a customer for some little time he was invariably slow, owed them for an account many months past due, which they were trying to get settled, but believed him responsible for a small amount. Now, then, when information of this kind comes to hand about the only thing you can do is to try to guess which will strike your case, and if the mercantile agencies can give you a little better information than the last reference, undoubtedly, you will grant the credit. Then you will watch that account for a long time, and if he orders any more goods you will become suspicious of him, and when his account becomes due and he does not pay it and fails, you will say, "Just as I thought it was."

It also appears that where a customer has been dealing with a house for many years and has received various accommodations in the way of renewal on notes, he frequently becomes careless, and thinks that the money which should go to pay his maturity paper can be applied to other sources without asking the consent of his creditor, and takes it as a matter of course. This method of juggling with money belonging to the creditor should be stopped in its incipency, as, if it is allowed to continue, the creditor will always be the loser. In this respect it may be wise to quote an actual experience regarding a customer who at maturity of his account gave notes. At maturity some of the paper was paid, other in part, and some renewed in whole. It so happened that a note which was renewed in part, through some error of the bank, was presented at the debtor's bank for payment and was paid; after a week had passed it was brought to the notice of the debtor, who knew nothing of the payment until notified; then, of course, followed demands for an explanation, which naturally appeared rather lame. At any rate, it made a customer who will not ask for unnecessary accommodations.

The debtor who is accustomed to the drinking habit is the one who must be looked after quickly, as it is an undoubted axiom that he will neglect his business affairs, and when such knowledge comes to the creditor it is important that credit be withdrawn and the account closed as quickly as possible, otherwise it will prove costly. In this connection it may be related that a few weeks ago, having sent a new salesman over a portion of territory in which was located a customer who formerly had met his obligations as promptly as could be expected, the salesman learned that the debtor was accustomed of late to frequent the hotel bar and neglect his affairs, the result of which was the bank from which he had a small loan, refused to renew it because of his habits, which were becoming very loose. The result was that an assign-

## What Is It?

What is it that measures success in business? It's growth, is it not?

A paint trade that doesn't grow isn't a success, whether it's the trade of a small dealer, large dealer or manufacturer.

Growth—large growth—characterizes

**THE SHERWIN-WILLIAMS Co.**

We have made bigger gains than ever this year. We're growing in every direction. We're putting up new buildings to take care of the growth, and these buildings are one of the best evidences of the success of S. W. P.

We grow because the dealers who handle S. W. P. are growing.

You'll be growing, too, if you take hold with us.

ment took place, and a few creditors are mourning for the payment of their accounts that will never come to pass.

So that, in conclusion, it will be observed that the debtor who uses the money or goods belonging in whole or in part to another in any but a legitimate way, is very liable to undermine his reputation, and the result will be financial disaster.

In this period of our civilization, where trade is the result of close margins of profit, more the result of opposition than competition, the qualities of integrity and stability are those which make a good, substantial and profitable customer.—

CHAS. D. WETTAOH.

### A Valuable Article.

Cushman & Denison, long known as makers of the "Perfect" Pocket Oiler, Gem Paper Clips, etc., have just purchased the patents covering the "Perfect" Mucilage Bottle. They have decided to buy this bottle only after a series of thorough and severe tests which convinced them that it was the only mucilage or paste bottle in the market that was actually serviceable or valuable for general use. It embodies in its construction a water chamber which prevents gumming, thickening and evaporation of the contents. It is made of frosted aluminum, rendering it practically indestructible, and is designed to retail at 50 cents. A mucilage bottle is always a convenience and frequently a necessity on every desk. The old style bottle which allows the contents to thicken or become useless, has prevented many from enjoying the convenience which is now offered to all who own a desk, in the "Perfect" Mucilage Bottle in which the contents will be at all times ready for use.

The highest court of appeal in Great Britain has sustained the decision that a circulating library can be held pecuniarily responsible for libelous statements contained in any of the volumes which it circulates.

### Illumination at the Pan American.

Wonderful displays now witnessed every night.

Night after night as the Pan American Exposition grounds are illuminated, the admiration of the wondrous beauty of the effects obtained becomes more intense. It is recognized that a remarkable feat has been accomplished, and the public is free to admit that such glorious lighting effects have never been witnessed in any part of the world.

When one looks upon this veritable City of Light, it is hard to realize that the chance leaving of a Japanese fan in the laboratory of Thomas A. Edison made the perfection of the incandescent lamp, with which the Exposition grounds are lighted, a possibility.

Edison had tried everything as a material for filament making. Just when he was seeking for new materials with which to continue his experiments, he ran across the old fan, and taking a strip from one of the ribs, he carbonized it. The result was the long-burning light that gives such beauty to the Pan American Exposition.

This discovery of the material was followed by a search throughout the world for exactly the same kind of bamboo. Into the fever-stricken swamps of the Amazon men pushed their way and have never since been heard from. Through the wild jungles of Sumatra, the rare material, which was to give the world this perfect light, was sought. Deep into the interior of Japan one man worked his way, and there the peculiar fibre was found.

Such facts as these are of great interest when the whole world marvels at such magnificent lighting effects as are now nightly witnessed at the Pan American Exposition. Before incandescent lighting was discovered, it was impossible to make the evening opening of great expositions a success, and the thought arises, would there have been a great spectacular, electrical Pan American Exposition if that old fan had not been left in Edison's workshop?

One of the most effective pieces of illumination to be seen upon the grounds of the Exposition—always excepting the Electric Tower—is the Temple of Music. This building is situated in the southwest of the Court of Fountains, having this great court with its surrounding buildings on the one side, and the west wing of the Esplanade with the Graphic Arts, Horticulture, and Mines Buildings, on the other.

All these structures are brilliantly illuminated at night, and the Temple of Music, with its octagonal form and its dome and other elaborate architectural features, constitutes a most effective part of the illuminations at this point, for all its picturesque and graceful outlines are traced in rows upon rows of these incandescent lamps.

So powerful is the illumination thus produced, that the brilliant coloring of the various architectural features of the building can be seen as plainly as under the light of the sun, and the effect is more entrancing than it could be by day, inasmuch as a fairyland aspect is imparted by the lighting at night.

One of the prettiest pieces of decoration in connection with the interior of the Exposition structures is that in the grand dome of the Electricity Building. The colors of the decorations in this magnificent and beautiful structure are cream, light green and heliotrope. Tarlton drapery is the material used, and high up in the dome, right over the Westinghouse exhibit, a canopy top is formed, the beautiful drapery stretching out in graceful form to all sides from a common center.

Midway between the floor and the top of the dome, four great signs of the Westinghouse Co. are placed, one on each side of the square occupied by their exhibit. In these signs there are a total of nearly 1,000 incandescent lamps, the effect being attractive and beautiful in the extreme.

It is worthy of note that the decoration arranged for the dome of the Electricity Building is to be seen in all its grandeur by night as well as by day, as it is lighted by Nernst lamps. This lamp is the latest electric-lighting invention,

and it offers great promise of revolutionizing the art. By its use a remarkable saving is made in loss of the electric energy, and in the dome there are about 100 of these wonderful lamps, representing approximately, about 45,000 candle power.

ORRIN E. DUNLAP.

### Apple Parers.

As the apple season approaches makers of machinery for the preservation of this universal fruit are calling attention to the merits of their various machines, and particularly notable for industry in this direction is the Goodell Co., Antrim, N. H. This company has recently organized an advertising department in charge of a specialist and is devoting considerable energy to publicity and promotion. By reference to the advertisement of the company in our pages it will be seen that they claim to have the most extensive line, and to pay special attention to strength, solidity, simplicity and durability.

Their great leader this year will be the Improved '98 Bonanza, designed especially for Evaporators, Cannerys, etc. Following the design and principle of the popular '98 Bo-

IMPROVED '98 BONANZA APPLE PARER.

nanza, both of which were found to be eminently correct, the machine has been completely remodelled, larger bearings fitted, heavier framework supplied, and all parts adjusted for greater ease of operation and to secure greater wear. Such wear as is unavoidable has been anticipated and means for its compensation provided. All important bearings are brass journaled and the strength and solidity is increased many fold.

Reports from users, who have given the machine thorough and severe test, speak in terms of highest praise of its efficiency and durability.

### J. D. Warren Mfg. Co.'s Progress.

Old style methods of carrying Hardware stock are gradually being displaced by new store fixtures, cabinets, cases, etc. That style in popular demand seems to be the Warren system. This includes all that can be desired for economy of time, convenience and a finer display of goods.

The following are a few of the houses numbered among the June purchasers of this system of shelving:

A. D. Snyder, New Richmond, Ind.  
Henry Williams, Rantoul, Ill.  
W. B. Smith, Kane, Pa.  
O. E. Hasle, Park River, N. D.  
Penn Traffic Co., Limited, Johnstown, Pa.  
C. H. Miller Hardware Co., Huntington, Pa.  
Shacklett, Thomas Hardware Co., Fulton, Ky.  
F. T. Blish, South Manchester, Conn.  
A. H. Beall, Williamson, W. Va.

Never try to appear what you are not.

## RECENT TRADE PUBLICATIONS.

NATIONAL SWEEPER Co., Marion, Ind. Booklet catalogue, envelope size, of the select line of high-grade Clothes Wringers that form a portion of the product of this company. This line of Wringers is well known to the Hardware trade, being marketed under several names. The "Marion" has solid rubber rolls, tempered spring steel pressure regulator, combination clamps and metal-end drip-board. They are furnished in cerise red enamel trimmings, and special satin-finish galvanized cogs and clamps. Other Wringers are marketed under the name of the "Runeasy," "Victor," "Perpetual" and the "Monarch," the latter being furnished with folding bench. The "Marion" and "Runeasy" are fully guaranteed for three years, the "Perpetual" being guaranteed only for one year. The "Columbia," "Puritan" and "Pilgrim," also folding-bench Wringers, complete the assortment. The three-year guaranteed Wringers made by this company contain solid rubber rolls of a quality that permits of the greatest elasticity and longevity, while the one-year guaranteed Wringers are equipped with rolls made of a superior composition, outer-coated with a thick layer of rubber. This guarantee, it may be noted, covers not only the rolls but each and every part of the Clothes Wringer, the company desiring to indicate the confidence they have in the superior quality of their materials.

BLACKLOCK FOUNDRY, South Pittsburgh, Tenn, have recently issued an illustrated catalogue and price list covering their line of Hardware specialties consisting of Sad Irons, Country and Stove Hollow Ware, ground and unground; Sugar Kettles, English Pots, Cast Iron Shoe Lasts and Stands, Kitchen and Corner Sinks, Grates, etc. This is a pamphlet catalogue of 24 pages printed in two colors on good paper, and well illustrated throughout, giving a very good idea of the productions with which they have been identified for so long a time. Included in the line of goods referred to will be found cast iron cooking utensils, including Stove Kettles and Pots, Blacked and Bailed; Eccentric Stove Kettles and Pots, Stove Hollow Ware, including Skillets, Gridles and Long Pans, also Sad Iron Heaters, Gridirons and Waffle Irons. They are manufacturers of Ornamental Square Grates with hooded front or smoke arrester, in very attractive patterns. We notice the adoption in this catalogue of the method suggested by Secretary-Treasurer Carter, of the Southern Hardware Jobbers' Association, referred to by us in a recent issue of *Hardware*, that of attaching an envelope to the inside back cover of the catalogue, in which the discount sheet may be placed without fear of being mislaid, and so that it may be readily removed when necessary to loan the catalogue to a customer.

MARLIN FIRE ARMS Co., New Haven, Conn., have recently issued a new illustrated and descriptive catalogue covering their entire line of the Marlin Repeating Rifles, Carbines, Muskets and Shot Guns, and including in its contents the Marlin Rust Repeller, Everlasting Shells, Reloading Tools, Sights, etc. The catalogue is arranged in three sections, a complete index being furnished in connection therewith. Part I is designed for the quick reference of dealers and consumers who desire in brief descriptions the details of the arms. Part II is intended for the consumer who is apt to desire more complete information in regard to the arms and ammunition used in the catalogue, and this portion by careful reading enables a novice to form a correct decision as to which arm will best suit his individual wants and desires. In part III is given a number of hints that should interest and

possibly help shooters in general. The company state that any points of information not covered in this little catalogue they will take pleasure in giving at any time to the best of their ability, if inquired in regard to by mail, as all correspondence having reference to their product is answered promptly and given careful consideration. The catalogue is one of the most complete ones that has ever been issued by this well-known company, and as is characteristic of this company, has an extremely artistic cover from a design by C. Everett Johnson, giving a very fine illustration of "Lo, the poor Indian," clad in his native costume, apparently very suitable for the weather we have been recently enjoying.

TORRENT PUMP AND FENCE Co., Cleveland, Ohio, have recently issued an Export catalogue of their products, in which the merits of their productions are described in Spanish as well as in English, making it a useful catalogue for circulation in Spanish countries. This company having recently greatly enlarged their facilities by moving to their new location, 1911-1925 Harvard Street, Cleveland, have been enabled to supply their goods with a greater degree of promptness than was the case before. Their principal product is the popular Torrent Purifying Pump, which has been largely introduced through the efforts of the Hardware and Implement trade.

UNION MFG. Co., Buffalo, N. Y., have recently issued an envelope-size catalogue of twelve pages covering their line of Union Grinding Machines and other Hardware specialties. These machines are operated by foot-power and are much simpler in construction and more compact in design than any ordinary sewing machine, requiring no more skill nor power to operate them. They will be found extremely useful for grinding drills, knives, cleavers, scissors, chisels, etc.; in fact, almost anything in the line of tools. The special features of the machine are protected by letters patent. Included in the contents of this little catalogue is illustrated and described the Dental and Jewelers' Lathe No. 10 made by this concern, a very useful appliance of the kind referred to. They also manufacture the Perfection Raisin Seeder, Solid Leather Socket Chisel Handles and Screw Drivers and Scratch Awls that are also furnished with these patent leather handles, making them extremely durable and being almost indestructible. These handles are very attractively placed upon the market, being made from the best sole leather, cemented and pressed on a steel core bar. Being highly burnished gives them a rich and attractive appearance. They will be found a valuable addition to the stock of a general Hardware dealer.

### Liquid Bronze in Germany.

Consul-General Guenther, of Frankfort, May 20, 1901, reports that, according to *Kuhlow's German Trade Review*, a German chemist has succeeded in making liquid bronze free from metal. The process is described as follows: Ten parts of aniline red and five parts of aniline purple are dissolved, by means of a gentle heat, in one hundred parts of alcohol. Five parts of benzoic acid are then added and the mixture is boiled from five to ten minutes. The bronze is said to be especially adapted for bronzing wood or paper.

This current immigration compares as follows with that of recent years at its highest and lowest points, that of recent fiscal years being: 1900, 520,000; 1899, 311,715; 1898, 229,299; 1897, 230,832; 1896, 343,267; 1895, 279,948; 1893, 502,917; 1892, 623,084; 1886, 334,203; 1882, 788,992; 1878, 138,469.

## NEW GOODS AND SPECIALTIES.

### Carpenters' Vise.

R. Bliss Mfg. Co., Pawtucket, R. I., are the manufacturers of the Carpenters' Vise shown in our illustration. These are made by them in connection with a large number of specialties manufactured from wood for distribution through the Hardware trade. They are made in three sizes, the Amateur's Vise, No. 155, being  $1\frac{3}{4}$  inch hickory screw. The

CARPENTERS VISE.

Carpenters' Vise, No. 154, with two-inch hickory screw, is 36 inches high, while the large size, No. 153, is  $2\frac{3}{8}$  inch hickory screw and 36 inches high. These specialties are made from the best material possible for the construction of such goods, and are known throughout the trade as being first-class goods in every respect, the reputation of the R. Bliss Mfg. Co. being well known to the Hardware trade as the manufacturers of reliable tools of this description. The Hardwareman who has no catalogue of theirs in his possession would do well to write for one, as the line of similar goods made by them is without comparison for extent or variety.

### Lane's Steel Carriage Jack.

Lane Brothers Co., Poughkeepsie, N. Y., among the numerous specialties they control, are manufacturing Lane's Steel Carriage Jack, an illustration of which we give in this article. Among the principal points of advantage claimed for this useful article are, that it is made entirely of steel, and consequently unbreakable, and this steel construction enables the manufacturers to make a lighter, stronger, more compact and more durable jack than has heretofore been placed on the market. It has double levers near the base, giving great lifting capacity for the size of the jack. It will be noticed the lever handle has no fixed fulcrum, but that the farther end is pivoted to the double lift bar, the other pivot being connected by links to the lower rocker lever, which latter is pivoted at the forward end to the double lift bar. These levers are mainly inside the steel case, and free from obstruction, and all are placed at the strongest part of the jack, at the base. Whatever may be the height of the axle, it is sustained directly over the center of the base, thus avoiding any

tendency to carry the wagon forward or back and tip the jack over. In operation, when force is applied to push the handle down, the farther end of the handle lifts on the load, moving upward with the lifting bar, while the other pivot moves down, transmitting force through the connecting links and the lower rocker bar to the main lifting bars of the jack.

LANE'S STEEL CARRIAGE JACK.

Thus it will be seen as referred to above, there is no fixed fulcrum, which is the essential feature of every other jack. This creates so little friction that in actual service they will be found to raise a given load very easily, generally requiring not half the usual effort. They are made in four sizes, No. 0, which is calculated to lift 500 pounds; No. 1, 900 pounds; No. 2, 1,800 pounds and No. 3, 4,000 pounds. It is stated by the manufacturers that on their factory testing apparatus over 2,000 pounds have been raised with No. 1 size, and about four tons with the largest size, although rated in the list at much more conservative figures. Wherever introduced they have become exceedingly popular, and supplementary sales have invariably followed in increased proportions.

### Bull Terrier Wrench.

The Whitman & Barnes Mfg. Co., Akron, Ohio, are the manufacturers of the Bull Terrier Wrench, which we illustrate here, Fig. 1 being a representation of the article as placed on the market, and Fig. 2 giving a sectional view of the acting mechanism. The body of the wrench is drop-forged from solid steel, the jaws being made of special steel, thoroughly hardened and tempered for the purpose to which it is applied. By the means of a hardened steel plunger which passes through a nut in centre of the wrench, both jaws open and close at the same time. This feature makes it extremely quick and easy to adjust to the different sizes of pipe without the use of accompanying springs. It is nickel-

plated, manufactured in one size only, which is calculated to take in pipe up to one inch in diameter. Its weight is but ten ounces. The Whitman & Barnes Mfg. Co. are also manu-

BULL TERRIER WRENCH.

facturers of a number of other wrenches known to the Hardware trade under the name of Bull Dog Wrenches, which are provided with positive jaws and without the automatic action which is the desirable feature of the Bull Terrier under review.

#### "Rex" Safety Razor Stropping Machine.

R. Heinisch's Sons Co., Newark, N. J., New York office, 90 Chambers Street, are the sole selling agents for the Rex Stropping Machine Co., 606 Arch Street, Philadelphia, Pa., whose Razor Stropping Machine is illustrated in

FIG. 1.

the cuts herewith. This Stropping Machine is designed for the purpose of honing safety razors, and is  $7\frac{3}{4}$  inches long over all, the illustrations shown here being about two-thirds size. Fig. 1 shows the machine as it is distributed to the trade, while Fig. 2 shows the method of using it on a strop, the distinctive feature of which is, the blade is stropped from heel to point, instead of in a straight line parallel with the

FIG. 2.

strop. The two outer arms of steel shown in the cut are covered with rubber, the mechanism being pivoted near the end of the hard wood handle. The ratchet movement, which

is one of its principal features, and side springs, cause the blade to turn automatically on its back in the proper direction with every forward and backward movement of the machine. By this simple method a safety razor blade even by one unfamiliar with its use can be skilfully honed. In connection with its use in operating this machine, the manufacturers also make a fine, high-grade Russia leather swing strop, although any strop can be used with it.

#### Nail and Corn File.

J. C. Kenyon, Owego, N. Y., is the manufacturer of the Nail and Corn File illustrated in this article, which possesses many desirable features not usually found in so small an article. The file is made of cold-rolled steel, tempered very hard, yet in a manner that makes it fairly flexible and not liable to fracture. Each end is beveled and by proper manipu-

NAIL AND CORN FILE.

lation cleans, scrapes and files finger nails to a perfect finish. It is also recommended by the manufacturer for the purpose of filing corns down smooth under the improved methods of eradicating these troublesome articles that have of late become the vogue. Each File is marketed in a leatherette case, and they are put up one dozen on an easel card, to be placed on the counter to stimulate sales. The net price to the retail trade is 75 cents per dozen. It will be found a popular seller when once introduced.

#### Rogers Patent Fence Machine.

Among the specialties identified with the name of the Torrent Pump and Fence Co., Cleveland, O., the manufacture of the Rogers Patent Fence Machine, is one of the most important. We give an illustration herewith of this important article. It is provided with a steel plate frame, making it both light, rigid and durable. The machine is hung on a pivot, supported by wrought iron legs, which are connected by a graduated section, or brace. The legs run on rollers, which in turn run on a track. The machine is fastened to the graduated section at the bottom by a spring catch, which is operated by the foot, and the machine easily adjusted for any angle of hill or level, thus making the fence always perpendicular, and always fitting the ground. There are nine working heads, each set in steel bearings and all operated by one turn of the crank. It has a picket holder that adjusts itself to any thickness of picket and holds it firmly so that it cannot get out of position when working the machine. It has an adjustable gauge at the top, so that all pickets can be made the same height, or it can be taken off when using high pickets. The operation of this machine is very simple, but positive. In the construction of the fence, there are two wires to each strand, passing through holes in each working head. By turning the crank, the strands are given a cable twist, which is made in the opposite direction after each picket. The tension piece to the left gives an even tension to all the strands, and allows them to be

stretched as tightly as desired, which is done by the regular working of the machine. This is one of the original advantages in the construction of this fence over woven wire and loom-woven picket fence, it being all made in place, and all the stretch taken from the wire. There are about  $8\frac{1}{2}$  inches of stretch to the rod in ordinary fence wire, and in

### Death of John M. Marlin.

John M. Marlin, president and treasurer of the Marlin Fire Arms Co., died at his residence, 326 George Street, New Haven, Conn., on June 30th, after an illness which really had its beginning about three years ago, partly as the result of an attack of typhoid pneumonia, from which he recovered

ROGERS PATENT FENCE MACHINE.

loom-woven fence, this is not taken out, but usually left to contract in cold weather followed by a sag under expansion. In the operation of this machine the stretch is all taken out as referred to above. This machine makes the fence to fit the ground, however rough it may be, and each strand has the same tension as the others, with pickets always straight up and down. This is claimed to be a very important point in its original construction.

### "Diamond" Sugar Beet Fork.

Ashtabula Tool Co., Ashtabula, Ohio, among the numerous special tools that they manufacture under the trade mark "Diamond" are placing upon the market the "Diamond" Sugar Beet Fork, an illustration of which is presented here. This very desirable article is made especially to meet the demand of the beet sugar makers for a fork composed of ball

only to continue in a state of precarious health until he finally became afflicted with Bright's disease, from which he died. Mr. Marlin was not only one of New Haven's best known and respected citizens, but his name is familiar to the users of firearms the world over. He was born in Rainbow, town of Windsor, Conn., 65 years ago, and in 1864 founded in New Haven the business which has continuously since borne his name. He first started the manufacture of pistols. Later he engaged in the manufacture of the Marlin repeating rifle and shotgun, two of the best known arms of that character on the market to-day, and up to the time of his death, has been the head of a uniformly successful business. The deceased is survived by a widow and two sons, Mahlon Henry, vice-president, and J. Howard, secretary of the Marlin Fire Arms Co.

"DIAMOND" SUGAR BEET FORK.

end tines of a proper size for the work required of them. The entire fork is made from one solid piece of cast steel, the ends of the tines being drop-forged to form the balls. It is provided with seven tines, fourteen inches long, that are spaced  $1\frac{3}{4}$  inches apart. The width of fork is fourteen inches at the head and sixteen inches at points. It is marketed fitted with 36-inch iron "D" handles with wide strap ferrules, and is intended by the manufacturers to be equal if not superior to any fork ever offered to the Hardware trade. The company have recently issued a very handsome catalogue of their products, which the up-to-date Hardwareman would find it to his advantage to write for if not already in his possession.

If the craze for automobiles continues they will, before long, entirely supersede the use of the horse at the Nation's Capital, for not only have they become a fad with society people, but the shops, the express companies and the transit companies are rapidly adopting them.

It is hardly realized at home that the total steam tonnage of Germany, which in 1871 amounted only to 81,994 tons, has risen to upward of 2,159,000 in 1900. As an instance of the vast capital invested in single steamship companies in Germany may be cited the £5,550,000 in the North German Lloyd and the £4,637,000 in the Hamburg-American. Of eighteen such companies, the shares of which are quoted on 'Change, two paid in 1899 11 per cent., eight 10 per cent., four 8.9 per cent., and the remainder, with but one exception, 6.7 per cent.—*Exchange*.

Whalers have begun to turn their attention to walrus and porpoises, large game having become too scarce to encourage exclusive pursuit. Elephants and camelopards, too, are melting away before the advance of agricultural enterprise, and the ostrich, with its congeners, the rhea and emu, will soon share the fate of the splay-footed moa that once haunted the marshes of New Zealand.

## REVIEW OF THE MARKETS.

**Wire Nails:** While the trade keeps up very well on a leading staple such as Wire Nails, the demand is a desultory one, apparently for the purpose of keeping stocks assorted. The volume of the output is lessened thereby to some extent, and prompter shipments are realized. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
" less than carload lots.....	2.35
To retailers in carload lots.....	2.40
" less than carload lots.....	2.50

**New York prices.** With the prevailing demand about as usual for this season of the year, prices remain at following quotations:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** The recent meeting of the Cut Nail manufacturers reaffirmed for July the prices which dominated the sales for June, making a remarkably steady market under a limited demand. The business for the first six months of this year is referred to as having exceeded that of 1900. The following quotations are unchanged: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	\$2.10
Carload lots.....	2.05 to 2.10

**New York prices.** With only average demand, but good for the period, prices remain as previously noted.

To jobbers in carload lots on dock.....	\$2.13
" less than carload lots on dock.....	2.18
Small lots from store.....	\$2.25 to 2.30

**Barb Wire:** There is still an excellent demand for Barb Wire, the business done on this staple line for the past six months having been a phenomenal one, with slight signs of a let up, dealers' stocks being in no surplus condition for even ordinary requirements. Mills are still greatly behind orders. No change in quotations, which remain as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
" Galvanized.....	2.90
" less than carload lots, Painted.....	2.65
" Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
" Galvanized.....	3.00
" less than carload lots, Painted.....	2.80
" Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** A continued large demand for Plain Wire keeps the mills busy filling back orders, very little headway being made against the accumulation of orders already booked. Prompt shipments devoutly wished for, are scarcely anticipated, and the prospect is these conditions will continue for some time. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
" less than carload lots.....	2.30	2.70
To retailers in carload lots.....	2.35	2.75
" less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence Wire Advances (Catch Weights).			
Nos.	Base.	Galvanized.	
6 to 9.....	\$0.05 advance over base.....	\$0.40 extra.	
10.....	.10	.40	"
11.....	.15	.40	"
12 and 12½.....	.25	.40	"
13.....	.25	.40	"
14.....	.45	.75	"
15.....	.55	.75	"
16.....	.70	1.00	"
17.....	.85	1.00	"

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**American Screw Co:** The American Screw Co., Providence, R. I., are still quoting the discounts which have obtained with them during the past season on the following leading goods of their manufacture:

	Discount.
Flat Head Iron Screws.....	90 per cent.
Round and Oval Head Iron Screws.....	87½ per cent.
Drive Screws.....	90 per cent.
Flat and Round Head Iron or Brass Machine Screws.....	50 per cent.
Fillister Head Iron or Brass Machine Screws.....	40 per cent.
Norway Philadelphia Tire Bolts.....	82½ per cent.
Eagle Philadelphia Tire Bolts.....	85 per cent.
Bay State Tire Bolts.....	77½ per cent.
Flat and Round Head Stove Bolts.....	77½ per cent.
Stove Rods.....	65 per cent.
Sink Bolts.....	77½ per cent.
Rivets, Tinnerns, Coopers, etc.....	70 per cent.
Hand Rall Screws.....	60 and 10 per cent.

**Linseed Oil:** Prices have again advanced since our previous issue, and the following are the latest quotations by the Dean Linseed Oil Co., under date of July 5th:

In lots of less than 5 barrels.....	83 cents per gallon.
In lots of 5 barrels or more.....	82 cents per gallon.

The five-barrel prices applies only to deliveries of that quantity at one time.

Rolled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 85 cents per gallon.

### THE PITTSBURGH TRADE.

Vacation time is with us again, but the wholesale houses find it difficult to spare men from their places. Trade continued very good all through June, and July opens the same way.

Hot weather for the past few days has moved seasonable goods rapidly, Screen Doors, Refrigerators and Freezers being in good demand.

Contrary to the usual rule, there has been no let down in prices, or anxiety for orders by manufacturers at the mid-year period. This year manufacturers seem to be filled up with orders, and it is difficult to get orders filled. Under these conditions, we admire the conservatism which holds prices steady rather than advances them. A good Fall trade seems to be assured.

LOGAN-GREGG HARDWARE CO.

### THE NASHVILLE TRADE.

Warm sunshiny weather interspersed with a few growing rains have made a wonderful change with the agriculturists in the past three or four weeks, and everything now points to a bountiful harvest.

Business is experiencing the usual dullness that always comes at this time. Stocks are being taken with some indications that the figures will be on the right side, and should no declines come to weaken confidence, we may naturally anticipate good business a little later on.

Margins have been smaller since last stock-taking than for the preceding year, but that has in a measure been made up by the increased volume of business, merchants have bought conservatively and are meeting their obligations fairly well. Only those who are chronically behind are asking a little more time.

H. G. LIPSCOMB & CO.

The demand which we have created for this excellent wood finish makes it a most profitable article for hardware dealers to handle.

**JAP-A-LAC** is the best finish on the Market for  
FLOORS AND INTERIOR WOODWORK.

Women all over the country are buying and using it. Put in a line of JAP-A-LAC and add to your revenue.

We have a very attractive proposition for dealers.

The Glidden  
Varnish Co.,  
CLEVELAND,  
OHIO.

**JAP-A-LAC**

#### THE CHICAGO TRADE.

Our June business was unprecedented. Orders continue to pour in on us, and we are being taxed to our utmost to fill them all promptly. Prices remain very firm, although there were a few advances the past thirty days, and we are happy to say, no declines, although the latter were entirely unlooked for. Fall goods are already in heavy demand, and are being sought for a great deal earlier than was the case last year. The scarcity that is now being felt on a great many lines, and which is becoming a more serious matter every day, is probably the cause of this, and is influencing some of our customers to place early orders for Fall goods.

Crop reports over all of the territory we cover are very encouraging, and we therefore look for a continuance of our heavy business, until the coming Fall season is over. As far as we can learn, most all of the mills furnishing the different classes of raw materials to the manufacturers are away behind in their deliveries, and are liable to be more so, owing to the additional labor troubles which now seem imminent.

We have also been informed that another advance on copper is apt to take place in the near future, which will certainly affect all finished articles made therefrom.

The outlook at present, considering all the existing conditions, is, to say the least, very favorable, and rather encouraging.

WELLS & NELLEGAR Co.

#### THE SAGINAW TRADE.

The first six months of 1901 is passing out in a blaze of glory, and a blaze of heat. Hot weather has stirred up the natives and brought us a deluge of orders that are most satisfactory to us, so think we are right in saying the half year ends in a blaze of glory.

Retailers will start in for Fall business with a light stock; in consequence, jobbers should have a heavy one. The outlook points to a continued scarcity of certain classes of goods, and slow shipments will rule throughout balance of year.

Locally, everything looks bright and optimistic; improvements are taking place in all branches; every one is working and labor is scarce, and the most kindly and satisfactory feelings exist between the jobbers and their friends, the retailers.

We notice quite a deal of discussion going on in the trade papers about the passing of the jobber. This disastrous event will, in our judgment, never take place. The interests of the jobber and retailer are so closely entwined that to sever them in any way would be the ruin of both. The manufacturer can never handle the retail trade direct with profit to himself or the retailer; even to discuss this matter seems to us the height of folly. Let's spend our time more profitably by using our utmost efforts to making the friendship between jobber and retailer stronger.

MORLEY BROS.

#### THE ST. PAUL TRADE.

With the crop prospects as good as they are, business keeps up in good volume, but now we are having too much rain and a danger exists of the growth being all straw. Still, there is time for a good crop, if it changes to the right kind of weather, and we hope for the best. Prices are being well sustained, and it is right that they should, for the conditions look favorable for a scarcity in many lines which may result in a desire for goods at any price. We ourselves feel that we want to provide for a good Fall business by getting our stock in shape for the large demand which is quite sure to come. Collections are unusually good for this time of the year.

C. W. HACKETT HARDWARE Co.

#### THE SAN FRANCISCO TRADE.

"'Twas a good half year, just passed," say the Hardware men, "and the prospect for a successful business year is being strongly indicated by the signs of the times." Farmers are now harvesting heavy hay and grain crops, and a splendid fruit shipping record is being made, and at prices highly satisfactory to the growers, all of which is mentioned as a prime factor in the feeling of confidence prevailing throughout the business community.

Some wholesale houses report a lessened demand for several lines of goods, principally in machinists' tools, in consequence of local strikes, but this falling off is neither as serious nor general as the sensational daily press is wont to make it appear. In the main, Hardware merchants are pronounced in the assertion that business is not only fully up to last year, which is a good deal to say, but some of the dealers report it the best year thus far that they have ever had. In builders' Hardware and tools lines, the greatest activity prevails, the carpenters' and builders' strike of several months ago, which has not yet been formally declared off, notwithstanding. Last year this business rounded up splendidly for the builders' Hardware trade, but this first day of July, Mr. Armstrong, of Philpot & Armstrong, reports 1901 business to date a handsome per cent. ahead of last year. In speaking of the service of factories and transportation lines, Mr. Armstrong also remarked that they have been reasonably prompt with deliveries, no waiting noted excepting in the case of some special goods, such as fine grade locks and bronze Hardware for house furnishings.

A warm reception was tendered by the trade to W. R. Wheeler, manager for Holbrook, Merrill & Stetson, on his return from the East, whither he had gone to appear in Washington before the Interstate Commerce Commission as a witness for the Pacific Coast jobbers in the suit of the St. Louis Business Men's League. While in Washington Mr. Wheeler also gave testimony before the United States Industrial Commission on transportation and industrial conditions in general on the Pacific Coast, advocating among other things, a reformation in the War Department's method of purchasing quartermaster stores so that the Pacific Coast merchants might be given an opportunity to bid for contracts.

INDUSTRIAL PRESS ASSOCIATION.

#### THE GRAPHITE TRADE.

In their June letter to *Hardware*, the Biddle Hardware Co. slipped gracefully into poetry and was tempted to exclaim with the poet: "Oh, what is so rare as a day in June!" As the weather reports tell us that to-day, July 2, Philadelphia took first prize for heat, and as it is 100 and over here in Jersey City to-day, we are wondering what sort of poetry is being quoted in the Biddle Hardware Co.'s office to-day. As you will undoubtedly have several sermons on the weather, we will refrain from any further remarks. The hopefulness of the June correspondents was not miscalculated. The month of June fulfilled all its promises, and although we enter July under torrid skies, there seems to be no let-up in business activity. Every fellow seems to be on the jump and well able to jump. It is impossible to say which of the Dixon departments is the busiest; possibly it is the pencil department be-

cause of the school orders for lead pencils. The general and continued prosperity of the country calls for something beside bare necessities, and the great trunk lines, trust companies, and estates are freely buying silica-graphite paint for roofs and iron work. It beautifies as well as protects. Did you ever notice that during good and easy times, people are apt to add a bit of something pleasant to their orders—probably something they would very likely omit if they weren't feeling pretty comfortable? The other day we got a nice order for Dixon's pencils, and, as an afterthought, a postscript was added as follows: "About a year ago you shipped us the most perfectly satisfactory lot of pencils we have ever had in our office, covering a period of more than twenty years." Now that was nice, and it made us feel good, for, although a corporation we have a soul, and over 700 souls working with us contentedly.

JOSEPH DIXON CRUCIBLE CO.

### Continued Confidence Endangered.

During the proceedings of the Manufacturers' Convention held recently in Detroit, the following resolution was unanimously adopted, and its importance is unquestioned:

*Whereas*, The people of the United States have been favored by Providence in the possession of raw material for production equal to the requirements of our country and largely for foreign countries whose confidence we enjoy to the extent of a strong inclination to buy our wares.

*Resolved*, That we, The National Association of Manufacturers in convention assembled, recommend renewed care in the use of all materials and workmanship furnished foreign nations, the filling of orders exactly as received, the shipment of goods in proper condition, so that we may continue to enjoy the confidence which they have reposed in us.

Mr. Myers, of F. E. Myers & Bro., Ashland, O., in support of this resolution said, "I will say that I find in my travels abroad the buyers of our wares are inclined to give us cash in New York, or on bill of lading on receipt of goods, and unfortunately, some manufacturers have not exercised the care that they should in the production of their goods and in the material used; and I think it is of the highest importance as manufacturers of the United States that we should exercise great care in these matters and retain the confidence of our foreign consumers, which will mean a great deal to the manufacturers of this country."

President Search also added: "We forget these buyers are a long distance from us, and if we neglect any item that neglect makes a delay of perhaps two or three months in the filling of any bill or invoice, and it aggravates our foreign buyers to such an extent that he will find some one else with whom to do business. By putting this resolution on our records, it will remind our people of the fact that there has been some looseness and there is a chance for us to do some good in this way."

The meeting then adjourned.

### Expirations of Patents &c.

PATENTS EXPIRED JUNE 24, 1901.

- 300,766. NAIL-EXTRACTOR, Maschil D. Converse, New York, N. Y.

### Sending Catalogues.

HOW BEST TO REACH PERSONS FROM WHOM BUSINESS WILL RESULT.

There is a vast waste in distributing catalogues. Everybody understands that, and probably everybody has attempted to avoid the loss as much as possible. The following suggestions from the *Jewelers' Review* will, no doubt, be found useful in the struggle to solve this troublesome and expensive problem:

"The average cost of mailing catalogues is from 2 to 5 cents each, although many cost much more than this. A number prove worthless through not reaching the persons to whom they are sent. And unless a mailing list is kept up to date this may go on indefinitely. The loss on the catalogue, not only its cost, but as a business bringer, must be added to the waste of postage.

"Even where catalogues are sent out semi-annually it is impossible to use the same lists without revision, for many changes occur even in six months; people are constantly dying and removing.

"The best way seems to be to send a sealed letter out to the list to be covered by catalogues about three weeks before the latter are to be mailed. The envelope should be printed with the firm name and address, and should contain a letter announcing the new catalogue, and stating that it will be mailed as soon as ready. This will tend to arouse interest in the catalogue itself, and locate many errors in the mailing list, as if the person to whom such a letter is addressed cannot be found, it will be returned by the post office to the sender. The easiest way to revise the lists is to have the wrappers for the catalogues addressed at the same time as the envelopes. Have the former compiled alphabetically in States, cities and names, and as the returned letters come in it will be an easy matter to take the corresponding wrappers out.

"When the catalogues are all ready for mailing, have another set of envelopes addressed from them, and put away for future use. This method will save in some cases 50 per cent. in postage, and insure the catalogues reaching persons from whom business will result."

### THE GRANT CHANGE PIPE CUTTER.

ONE IS ENOUGH TO CARRY.  
CUTS FROM  $\frac{1}{4}$  TO 2 IN.

Cuts with 3 cutter wheels, or  
with 1 cutter wheel and 2 rolls.

Changes Instantly.

Strong, light and simple. Nothing  
to get out of order.

H. F. LIVERMORE, 85 Pearl St., Boston.

We make a specialty of making to order only, a superior quality of Cast Steel Wire Springs, either for extension or compression. These Springs are all oil tempered and are made of an extra quality of wire drawn specially for our own use, of the same grade of stock as we use for the Springs that we put in our Spring Scales.

### Fixing the Profit.

In estimating the profits that a stock of goods should earn, too little attention is sometimes paid to the cost of carrying on the business.

No matter how small or large a business may be, its success depends on a thorough understanding of the figures. Invoices must be compared with orders and carefully kept, a cost book provided and each item recorded, and every matter of expense be thoroughly guarded against if the business is to be preserved against loss. In figuring cost so as to determine the rate of profit, not a single known or ascertainable item should be omitted. It is generally a good plan for the owner to credit himself with a certain salary each month and to charge the amount against expense or merchandise account. When a credit business is done, a certain percentage should be provided for a loss on bad bills.

In figuring on the rate of profit, it is a common mistake to group all goods under one head and to add a fixed percentage for profit. Under this system, all goods are expected to realize the same percentage even though some are necessarily quick sellers and others comparatively slow. If a certain line is in good demand at a fair price, there is more money in moving it quickly for a reasonable profit than in holding it at a figure which the customers will not feel like paying. Slow selling goods of a staple character can stand a higher percentage of profit and their sale will compensate for the smaller advance over cost made on others. In this way an average rate of profit can be struck, and the result will be more satisfactory than if it had been attempted by fixing a uniform rate on each separate line.

Nevertheless, each line should be made to bear its proper burden of expense. This can be determined by the amount of sales for any previous period and by dividing the different lines into departments. Conditions vary from time to time, and in this case a rule that was formerly correct may not have a proper or profitable application, but by comparing them together and striking an average, it will not be difficult to determine the share of expense which each line should bear, and where this has been done the percentage of profit in each case can be easily ascertained.—*Hardware Hints.*

## How To Do Business.

### RULES FOR BUYERS.

1. Buy to please your customers and not the manufacturer.
2. Give your customers the best values you can for your money.
3. Buy close enough to meet all competitors' prices.
4. Study prevailing styles—be first to show what you think will increase business.
5. Never overstock your store or department.
6. Keep posted on the different qualities and grades of your stock.
7. Be punctual in keeping business engagements.
8. Buy from those you know to be strictly just.
9. Do not trust to memory—keep a memorandum.
10. Never accept favors from drummers.
11. Never talk of employer's business to outsiders.
12. Keep posted on methods of up-to-date business houses.

### RULES FOR EMPLOYEES.

1. Get the confidence of your employer.
2. Be honest and accurate.
3. Be pleasant to rich and poor alike.
4. Never misrepresent goods to customers.
5. Be punctual as to business hours.
6. Meet all customers half way.
7. Study your stock—keep it clean and in place.
8. Always work for your employer's interest.
9. Make no engagements for business hours.
10. Always keep good company outside the store.
11. Do not insist on a customer buying what he or she does not want.
12. Do not talk too much to customers—answer their questions politely.—SAM WHITMIRE, in *Advertising World*.

This current immigration compares as follows with that of recent years at its highest and lowest points, that of recent fiscal years being: 1900, 520,000; 1899, 311,715; 1898, 229,299; 1897, 230,832; 1896, 343,267; 1895, 279,948; 1893, 502,917; 1892, 623,084; 1886, 334,203; 1882, 788,992; 1878, 138,469.

The silver dollar weighs 412 1-2 grains, or but 68 grains short of a full ounce. If a man carries around twenty-four of these coins, or about two pounds Troy weight, he thinks he is carrying a ton. A thief would have to lug 859.38 ounces, or approximately 71 pounds, if he picked up a bag which contained \$1000 in silver dollars.

## Sources of Ivory.

INFORMATION BROUGHT OUT BY CUSTOMS OFFICIALS.

The Board of General Appraisers has recently been wrestling with the problem of where ivory left off and bone began.

It seems, from the evidence taken before the board, that when one sells hippopotami teeth, walrus' tusks and other large tusks or teeth they are ivory, but when one imports them or wishes to purchase them, they are simply bone. The case in question was one where Morgenstern & Gildsmith, of New York, has imported some umbrella handles made of the teeth of the hippopotamus. The appraiser entered them as "manufactures of ivory" and dutiable at 35 per cent. ad valorem. The importers set up the claim that they were made of bone, not ivory, and were dutiable at 30 per cent. ad valorem. Witnesses were sworn and testimony taken on both sides, and the board reports its inability to find that any definite, distinct and general trade understanding exists upon this class of merchandise. Elephant ivory appears to be of a finer texture than the ivory from the hippopotamus or the walrus, but it is classed as elephant ivory simply be-

cause of its higher trade value and not because it is any more "ivory" than the other.

Quotations in ivory, it is said, disclose a vast variety of ivory. For instance, there are Zanzibar and East Indian teeth, the Mozambique, Abyssinian and soft Lisben teeth, the West African teeth, Egyptian and Malta teeth, East Indian cut points, East Indian hollows, East Indian turned curve, sea horse teeth, walrus teeth and whale teeth. After dealing with the distinctions between the various kinds of teeth which are commercially valuable as ivory, the board says that while some dealers insist on elephants' tusks when they want ivory, others are willing to take the teeth of hippopotami, and the latter and products from them sell in the markets as ivory. The price differs from that of elephants' ivory simply because of the difference in size and quality. It is, therefore, held that the umbrella handles in question are of ivory and that the tusks and teeth of elephants, hippopotami, walrus and mastadons are dutiable alike as ivory and not as bone or horn. The decision of the collector was, therefore, sustained.—*Exchange*.

# HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

## New Incorporations, Etc.

Amsterdam, N. Y.—Articles incorporating The Nash Refrigerator and Mfg. Co. have been filed with the secretary of state. It is proposed to manufacture and sell refrigerators and filters. The capital stock is \$40,000, and the directors for the first year are: Frank W. Clark, John Thompson, Jr., Chas. Horning, Carl Stoecker and Harvey W. Nash, of Amsterdam.

Augusta, Me.—Rawson Mfg. Co. has been organized for the purpose of manufacturing tools, hardware and other goods, with \$50,000 stock. The officers are: President and treasurer, K. Pardon Rawson, of Fitchburg, Mass.

Brooklyn N. Y.—Security Refrigerator Co. has been incorporated. Capital, \$20,000. Directors: L. F. Kunz, of Weehawken, N. J., and T. D. Raubut and T. H. Wilson, of New York City.

Buffalo, N. Y.—A certificate of incorporation has been filed with the County Clerk by the Buffalo Roll and Forge Co. to manufacture and sell mill machinery, tools and vehicles. The capital stock is \$25,000, and the directors are John S. Kellner, Archibald McKaig, Daniel J. Boyle, John Reilly and John McKaig.

Camden, N. J.—Articles of incorporation have been filed with the County Clerk by the Sapphire Corundum Co. Capital stock, \$100,000.

Cincinnati, Ohio.—The Xylotite Mfg. Co., capital, \$150,000, has been organized by Cincinnati capitalists, with these officers: John H. Hibben, president; George H. Swift, vice-president and general manager; W. J. Overbeck, secretary, and J. D. Parker, treasurer. Power pulleys will be manufactured from xylotite, a fiber composition. A factory has been rented on Cormany Street, opposite Township, Camp Washington.

Chicago, Ill.—The American Mop Co. has been incorporated. Capital, \$5,000. Manufacturing mops and wringers. Incorporators: W. B. Hadley, A. O. Richmeier and F. E. Page.

Chillicothe, Ill.—A company has been organized, the Bradley building rented, and within a short time the manufacture of steam cookers and other kitchen utensils will be undertaken. F. C. Sherman, Dr. J. Weaver, Howard Pettett, R. L. Humm and George Lester comprise the company.

Cleveland, Ohio.—J. M. and L. A. Osborn, who have been engaged in the tinware business as partners on Court Place have filed a certificate of incorporation as the J. M. & L. A. Osborn Co., with an authorized capital of \$200,000. The incorporators are: J.

M. Osborn, L. A. Osborn, Harold Remington, R. E. Hyde and S. L. Drake.

Defiance, Ohio.—A. W. Beerbower, who has recently been making patent gate weights, is now making refrigerators and has sold several of them in this city.

Eastwood, N. Y.—Eastwood Mfg. Co. has been incorporated to manufacture hardware specialties. Capital, \$100,000. Directors: Isaac Silvernail, Charles A. Silvernail and Charles Long, of Syracuse.

Hamilton, Ohio.—The Stenzel Mfg. Co. has been incorporated to manufacture hardware. Capital stock, \$10,000.

Indianapolis, Ind.—The Kelly Axe Mfg. Co., with a capital stock of \$2,000,000 has been incorporated with the secretary of state. The firm will operate an extensive plant at Alexandria, where there is already a firm operating by that name. The latter will be absorbed. The company will manufacture all kinds of garden and farming implements.

Kansas City Mo.—The Horizontal Swing Co. has been incorporated with a capital stock of \$50,000. Incorporators: Olof R. Olson, John W. Olson, Frank Rudd and Alfred D. White.

Lansing, Mich.—Charles Keith and Walter Pratt are arranging to build a factory for the manufacture of steel plow points.

Moundsville, W. Va.—G. C. Reppetto and J. S. Echols has begun the manufacture of gas stoves and ranges upon an extensive scale.

New Haven, Conn.—The Yale Motor Co. has been incorporated for the purpose of manufacturing and selling gasoline engines, engines of all kinds, dies, tools, patterns and machinery of all kinds. The incorporators are: Joseph E. Hubinger, Joseph P. Lavigne, William W. Scott, Willm H. Ely.

New York, N. Y.—Goodrick & Holland Co. has been incorporated to manufacture machinery and tools. Capital, \$10,000. Directors: F. J. Goodrick, of Arlington, N. J.; T. E. Holland, of Brooklyn, and B. F. Errington, of New York City.

Pictou, N. S.—T. A. McLean, of Charlottetown, P. E. I., has organized a stock company for the further development of his business. This company will extend their work in making agricultural implements.

Potsdam, N. Y.—W. W. Coleman, manager, and W. H. Orne, salesman, have formed a co-partnership as the combined Shade Roller Bracket Co. for the manufacture and sale of the wire shade roller bracket patented by Mr. Coleman, May 8, 1900. The bracket is to be manufactured in Potsdam as soon as a machine can be procured for its manufacture.

St. Joseph, Mo.—The Ratcliff Mfg. Co. have filed articles of incorporation, with a capital stock of \$5,600. The stockholders are W. H. Ratcliff, Agency Ford; W. A. McAllister, St. Joseph; John A. Rossi, Atchison; John J. Horan, St. Louis.

## Changes and Improvements.

Detroit, Mich.—W. H. Anderson & Sons have built a new brick factory for their tool business.

Detroit, Mich.—The Chicago Screw Co., which, like the Detroit Screw Co., is a part of the Standard Screw Co., of New Jersey—is opening a branch factory in a part of the building owned by the Detroit company on Riopelle Street.

Newark, N. J.—J. Wiss & Sons Co. are about to begin the erection of a two-story addition, 40 x 60 feet, to their present cutlery plant on Littleton Avenue. The building will be of brick, well constructed, and equipped with rope transmission machinery.

Newark, N. J.—One of the latest concerns to locate in Newark is the Uniform Steel Co. The company was recently incorporated, and has begun business with a paid-up capital of \$60,000.

Ottawa, Ont.—The American Hardware Mfg. Co. is building a large addition, which will treble the capacity of the present plant, in which \$5,000 worth of new machinery will be added.

Trenton, N. J.—The American Saw Co.'s plant adjoining the Roebbling Works, has been purchased by the Roebblings, and it will be operated by them as a saw concern until such time as the machinery, good will and patents can be disposed of, and then the plant will probably be made an addition to the Roebbling concern.

Walkerville, Ont.—The Page Wire Fence Co. has added a wire nail department to its factory.

Winooski, Vt.—Mason & Co. have secured the contract to construct a \$20,000 mill for the Porter Screen Mfg. Co. Ground will be broken at once for the foundations and the building will be completed early in August. The plans call for a wooden three-story structure 280 feet long and 60 feet wide. The mill will be built near the site of the one destroyed by fire last year. It will run at right angles with the railroad and will extend nearly across the property owned by the company.

## Miscellaneous.

Louisville, Ky.—At the regular monthly meeting of the Board of Directors of the Louisville Bolt and Iron Works, W. F. Bonnie was elected to membership in the board, and was also elected vice president. This company is now preparing to enlarge the plant according to plans formulated some time ago. When the company was first organized here it was the intention of adding a bar iron mill for the molding of all classes of bar iron. President Taylor has gone to Pittsburg to have the machinery, which was ordered some time ago, shipped and as soon as it can be placed in position the manufacture of bar iron will begin. Employment will be given to about fifty additional men.

# You buy goods to sell

—not to carry on your shelves.

Sargent's Gem Food Chopper is a seller, and it will not stay on your shelves if you let the housekeepers of your neighborhood know that you have it on sale.

**Why?** Because it is one of those articles that a housekeeper wants as soon as she knows of its advantages—the work it does, the time it saves and how exceedingly useful it is. Besides, it is the best Food Chopper made; that you can guarantee.

Sargent's Gem Food Chopper takes the place of chopping bowl and knife. It chops all kinds of meat, vegetables, fruit, crackers, bread, cheese—in fact, everything that has to be chopped; it chops in pieces of uniform size, fine, coarse or medium, as desired; it chops easily, quickly and quietly; is easy to take apart, easy to put together, easy to adjust, easy to clean.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Albany, N. Y.—The Colt's Arms Co., of New York, has applied to the Secretary of State for incorporation. The company has a capital of \$2,200,000, and will manufacture firearms, guns, cartridges and other munitions of war. The directors are: Gardner A. Brown, William Dawson, Montague Blight, Charles L. Burnham, of New York City, and James C. Thompson, of Brooklyn.

Bradford, Pa.—The Holley Motor Cycle Co.'s new plant will begin business within a few days and Contractor Unruh will complete it as expeditiously as possible.

Cheshire, Mass.—Curran & Powers, branch of Adams store.

Dover, Del.—Certificates of incorporation have been issued to the Pennsylvania and Kansas Powder Co., for the manufacture and sale of powder, dynamite and other explosives. It is a Wilmington enterprise, with a capital stock of \$25,000.

Dover, N. H.—J. J. McCarty, Locust Street, repairing.

Manchester, N. H.—Harry Noyes, Massabesic and Belmont Streets.

New York, N. Y.—Elterich & Co., has been incorporated to manufacture bullet shells. Capital, \$5,000. Directors: Mary Elterich, Charles Steinmann and Eleanor M. von Varel, of New York City.

New York, N. Y.—Ball Tire Co. has been incorporated to manufacture vehicle tires.

Capital, \$300,000. Directors: Mendel Presberger, Passaic, N. J.; Maurice Moses and M. F. Moses, New York City.

Windham, N. Y.—Mack & Jenne.

### Changes and Improvements.

Bath, N. Y.—J. H. Smellie, of Hammondsport, has sold the bicycle branch of his business to G. H. Curtis, who has stores here and at Hammondsport.

Bristol, Conn.—A resolution has been adopted, presented by Senator Sloper, changing the name of the New Departure Bell Co., to the New Departure Mfg. Co.

Dansville, N. Y.—H. E. Toms succeeds C. J. Fritz.

Elmira, N. Y.—A. Samuels advertises closing out sale.

Elmira, N. Y.—John C. Gallagher, 102 Exchange Street, will remove to 309 East Water Street.

Elmira, N. Y.—The Elmira Arms Co. has purchased the stock of bicycles and sporting goods of Paul A. Renton, who for many years has been in business in Market Street.

Plainfield, N. J.—The bicycle and repair business formerly conducted by William H. Rogers on North Avenue, has been purchased by Nelson Van Winkle. He also does general machine repair work and has taken the agency of the Pierce bicycle.

Rochester, N. Y.—Tower & Bull, 62 Monroe Avenue, advertise closing out sale of bicycles.

Rockford, Ill.—Chase & Tickner, the sporting goods dealers, have dissolved part-

nership, Mr. Chase retiring from the firm. Sayre, Pa.—The movable bicycle repair shop which was owned by a Mr. Wolcott in his place, has been purchased by C. J. Carey and E. O. Pealer.

Terre Haute, Ind.—The Indiana Powder Co. has filed articles showing an increase in the capital stock from \$50,000 to \$200,000.

### Recent Embarrassments.

Brockton, Mass.—A meeting of the creditors of W. H. Marble, the bicycle dealer of High Street, has been held in the office of F. M. Bixby, to whom an assignment was made the other day. The assets are \$5,000, and the liabilities, \$3,000.

Marion, Ohio.—C. B. Kelsner, bicycle dealer, of this city, has assigned for the benefit of creditors. Assets estimated at \$1,500, and liabilities not known.

### Recent Fires.

Lynn, Mass.—Pote & Co.

Niagara Falls, N. Y.—Julius Weaver, Slight damage.

Ogden, Utah.—B. Goodsell. Loss, \$400.

Oskaloosa, Ia.—Slatten Bicycle Repository. Loss, \$4,000; fully insured.

Pittsburg, Pa.—Frank C. Haughton, Liberty Avenue and Ella Street. Loss, \$600; partly insured.

Pottsville, Pa.—Crone's bicycle factory has been damaged by fire to the extent of \$2,000.

Rock Island, Ill.—J. Hynes, Fourth Avenue. Damage, \$150; insured.

Rochester, N. Y.—Simon Goss, 143 Chatham Street. Slight loss.

## HARDWARE MANUFACTURERS RECORD. Continued.

Peoria, Ill.—Pursuant to a general plan of enlargement the Kingman Plow Co. is about to erect a huge warehouse at their plant in Averyville, which will cost in the neighborhood of \$40,000. The dimensions of the new building, which will be a frame structure, are 80 x 153 feet, and it will be added to an immense structure of the same kind already up, making a solid building 80 x 306 feet, four stories in height.

Port Chester, N. Y.—The Port Chester Bolt and Nut Works intends to move its large plant to Buffalo. The concern employs more than 1,000 hands.

Springfield, Mass.—The Bemis & Call Hardware & Tool Co. has begun work on a new mill and office building adjoining their present No. 2 mill on South Street. The mill will be a model in every particular.

St. Louis, Mo.—The Buck Stove and Range Co. is just completing a large addition to its foundry plant at 3500 North Second Street, which, when in operation, will increase the capacity of the plant from 25 to 33 per cent.

Toronto, Can.—The Frost & Wood Co., Ltd., of Smith's Falls, implement manufac-

turers, have purchased the buildings, plant and good will of the Coulthard-Scott Co. of Oshawa. The later company manufacture seeding and cultivating machinery, and the Frost & Wood Co. have heretofore confined their output largely to harvesting machinery. It is said to be the intention to largely increase the output of machines at Oshawa, and there is a prospect of a second concern being taken in. It is located west of Toronto.

West Allis, Wis.—The Browning Mfg. Co. and the Kempsmith Tool Works have each bought sites for manufacturing establishments at West Allis, and are expected to begin the erection of their buildings in the near future, though the removal of the manufacturing plants will not come about for a year.

West Waynesburg, Pa.—For some time it has been known in local business circles that a shovel factory was to be established in this place. Work has now been commenced on the building, and in a few weeks the building will be ready for the machinery. The enterprise is entirely a home affair, except one

person, W. D. Forsyth, of Detroit, Mich., who is the general superintendent. The stock is held by six persons—Robert W. Munnell, president; S. P. Hooper, treasurer; J. W. Munnell, secretary; J. B. F. Rinehart, John T. Rogers and W. D. Forsyth. The style of the corporation is the Waynesburg Pressed Steel Co. It has its office in the Opera House building. The capital stock is \$50,000. The building which is now in course of construction is 80 x 140 feet.

Worcester, Mass.—Worcester will have a new industry in the Parker Wire Goods Co. Arthur H. Parker, of this city, who has been connected with the Wire Goods Co. as general salesman for thirteen years, will be president and treasurer of the new company, and the board of directors will include Mr. Parker and James M. Jackson, of Worcester and Edward D. Priest, of Schenectady, N. Y. The company will be incorporated under the laws of Massachusetts, with a capital stock of \$10,000 fully paid in. Stockholders other than the officers are Mabel C. Willard and Jeannette S. Priest, of Shenandoah, Ia., and Frank C. Turner, of Norwich, Conn.

**HARDWARE SALESMEN.**—Good chance for hustling Hardware salesmen to sell our lamps on commission. PEORIA VAPOR LIGHT Co., 413 Washington St., Peoria Ill. 171

**HARDWARE SALESMEN.**—To handle as a side line our labor-saving device, advertised elsewhere in this issue of HARDWARE. Liberal commission to good men. We furnish free to our agents a perfect working model, pocket size, which will lift 500 pounds. Address, DEPT. C, BURR MFG. Co., Cleveland, Ohio. a

## Side Line Offered.

**LIVE HARDWARE SALESMEN** wanted to handle our line of "Simplicity" Incandescent Gasoline Lamps. Easy to sell. Carry a burner in your pocket. Liberal commissions. H. MERKEL, Broadway and Elm Street, St. Louis, Mo.

**TRAVELING SALESMEN.**—Traveling men to handle side line on commission. RAPID RIFLE Co., LTD, Grand Rapids, Mich. 222

**TRAVELING SALESMEN** visiting Hardware, Implement and General Store trade in the States east of Illinois, to handle on good and prompt commission a splendid profitable side line. Sales by photograph; two photos cover the line. Many salesmen in Western States are making a good profit by it. Address H. F. BRAMMER MFG. Co., Davenport, Iowa. 145

**TRAVELING SALESMAN.**—Traveler wanted for quick-selling specialty, as vest-pocket side line. Address Liberal, care HARDWARE, 275 Broadway, New York. 224

**TRAVELING SALESMAN** representing prominent factory, and covering large territory, desires one good side line. Address ESPERANZA, care HARDWARE, 275 Broadway, New York. 234

## To Let.

**A FINE FIRST LOFT**, 50 x 50 feet, in centre wholesale Hardware district, New York City. Splendid light, freight and passenger elevator; all conveniences. Special terms to desirable tenant. Address STORE, care HARDWARE, 275 Broadway, New York City. 228

## For Sale.

**A STOCK OF HARDWARE.** Will average about \$5,000. Building, 30 x 70, 3 floors, brick, for \$5,000. In a live Virginia town. Full particulars given on application. Address J. K. PENDLETON, Clifton Forge, Va. 85

**MANUFACTURING**, Small Hardware, one-half interest, and full management. Established 35 years. Net Assets \$50,000. No liabilities. Eastern city. Principals only. Manager out of health. For full particulars and interview, address Genuine, care HARDWARE, 275 Broadway, New York. 24

## Hardware Business For Sale.

**TO CLOSE A PARTNERSHIP**; in complete running order; daily sales \$110 to \$165; an exceptional opportunity; inspection invited. Address Hardware Business, care HARDWARE, 275 Broadway, New York. 221

## Agency Offered.

**LIVE HARDWAREMEN.**—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, 275 Broadway, New York. a

**TO MANUFACTURERS.**—Wholesale house with foreign branches and connections is willing to undertake the selling agency of one or two good marketable lines. This is a favorable opportunity for manufacturers to secure reliable representation here in the East and abroad. Ample warehouse facilities. Address WM. SOMERVILLE'S SONS, 68 Pine Street, New York. 225

## Agents Wanted.

**TO SELL THE "NULITE,"** our incandescent vapor lamp. Sells almost on sight. An excellent opportunity for the live Hardware dealer, or anyone else who wants to make money. Ask for catalogue and terms. Address CHICAGO SOLAR LIGHT Co., Garden City Block, Chicago, Ill. 116

## Partner Wanted.

**RETAIL HARDWARE BUSINESS**, established fifteen years, central location, business prosperous and will bear closest investigation; want man to take active part in enlarging business and adding jobbing department for city trade. Address THOS. MCCracken, Secy., Minnesota Retail Hardware Association, 323 Boston Block, Minneapolis, Minn. 233

## Business Opportunity.

**WANTED, HARDWARE JOBBER AND RETAILER.**—Perth Amboy, N. J., offers an exceptionally good opportunity for a live man to open a Hardware store for both jobbing and retail business. This town has already 19,000 inhabitants, an increase of 86 per cent. over census of 1890 and is still growing. Buildings are going up in every part of the city, and the demand for Builders' Hardware is very heavy. There is no store of this kind inside of 10 miles. A fine \$18,000 building is all ready for the right party. Large, well-lighted ground floor and basement. Can have second floor if it is needed. Address S. A. WILDER, 148 Smith Street, Perth Amboy, N. J. 232

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

1330 G St., N. W., WASHINGTON, D. C.  
March 13th, 1900.

GENTLEMEN:—We have been selling your ladders  
for the past year and have yet to receive the first  
complaint about them. The workmen in our  
retail department have found them to be strong  
and easy to handle.

Yours truly,  
E. N. RICHARDS.

For Catalogue and Description, Write to

**MILLER LADDER CO.**

204 Orleans St., Chicago, Ill.

The "Miller" is a radical departure from the  
conventional style of step ladder. It has an indi-  
viduality entirely its own which has won for it  
recognition as the standard ladder in the decorat-  
ing trades.

We make a specialty of making to order only,  
a superior quality of Cast Steel Wire Springs,  
either for extension or compression.  
These Springs are all oil tempered and are made  
of an extra quality of wire drawn specially for  
our own use, of the same grade of stock as we use  
for the Springs that we put in our Spring Scales.

# DIETZ NEW

# JUNIOR LANTERNS

COX, N. Y.

## Dietz Junior Lantern.

(COLD BLAST)

FOR KEROSENE.

THIS Lantern is called a "Cold Blast" for the reason that it is fed exclusively with cold air, that which comes from above, being taken in through openings between the two rings at the top.

This system of air-supply greatly stimulates combustion with the resultant extra volume and intense whiteness of its light. It is fitted with an entirely new and most effective device for raising and lowering the globe, which also locks the burner in position. It is, in point of fact, a close following to the well-known Dietz Globe Street Lamp, and it will meet the demand of any one seeking an "extra good" Lantern.

This Lantern (and our Blizzard Lantern) are what users have long wanted—Lanterns which a strong wind will not affect, and which can be depended on to stay alight under all circumstances.

It is made with a round top oil pot, and is the handsomest Tubular Lantern made. It is 12 in. high, weighs 26 oz., and holds oil sufficient to burn 13 hours.

For a light weight, convenient Lantern, for use around the house, in the cellar, chicken house or barn, it has no equal.

Made in Tin, Brass (satin finish), and in Tin, with a reflector for use as a Dash or Wall Lamp.

For sale by

**ALL LIVE JOBBERS.**

If you handle lanterns send to us for a catalogue and to your jobber for prices.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. Size of page, 4 x 7 inches.

FOUR EDITIONS:

- A, 200 pages, - - \$1.00
- A 2, 400 pages, - - \$1.50
- A F, 200 pages with flap, 1.25
- A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. Page, 4 x 7 inches.

FOUR EDITIONS:

- B, 200 pages, - - \$1.00
- B 2, 400 pages, - - \$1.50
- B F, 200 pages with flap, 1.25
- B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. Page, 4 1/2 x 8 inches.

FOUR EDITIONS:

- C, 200 pages, - - \$1.00
- C F, 200 pages with flap, - 1.25
- C 2, 400 pages, - - 1.50
- C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. Page, 5 x 8 inches.

FOUR EDITIONS:

- D, 240 pages, - - \$
- D F, 240 pages with flap, -
- D 2, 480 pages, - -
- D F 2, 480 pages with flap, 1.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CH For Iron, turn to IRO  
" Parers, Apple " PAR " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

# HARDWARE

Archibald Paull Mitchell, Treasurer of the Hardware Publishing Co., publishers of *Hardware*, returned by the Liner Oceanic on July 17th, from a two months' vacation trip abroad.

Edward W. Heusinger, Secretary and Treasurer of the Heusinger Hardware Co., San Antonio, Tex., was an interested visitor at the editorial sanctum of *Hardware* during his recent stay in this city. He reports the prospect for Fall trade as being a promising one throughout the 300 miles of contiguous territory covered by their traveling representatives.

Huntingdon, Pa., will shortly have one of its leading stores, owned by the C. H. Miller Hardware Co., ornamented and perfected by a new equipment of antique oak hardware cabinets and cases. The system to be used is that of the J. D. Warren Mfg. Co., a system which is rapidly supplementing the old way of displaying small goods.

The Manual for 1901 of the Hardware Club of New York has recently been issued to the members and others entitled by exchange courtesy to a copy. The Manual presents in a concrete form a greater amount of laborious application than would be supposed from a casual glance. It is annually compiled by Alfred D. Clinch, chairman of the Committee on Admissions, to whom it has long been a labor of love in his fondness for detail. The active membership of the Club is full up to the edge of a growing waiting list, and with 142 non-resident members, makes the total number of 742 members, indicating a condition of prosperity which inspires a commendable degree of pride in those who daily enjoy its hospitality.

Brown & Sharpe Mfg. Co., Providence, R. I., notify the trade that their works will be closed from August 3rd to August 17th, inclusive, for the annual vacation and repairs. During the vacation the office will be kept open as usual, and orders for Machine Tools, Machinists' Tools and Measuring Tools, listed in their catalogue, will receive the same attention as at other periods of the year.

J. Stevens Arms & Tool Co., Chicopee Falls, Mass., report that never in the history of the company has business been of such increasing importance as at the present time. Their books are so full of orders it has been necessary to run part of their Hill and River plants twenty-four hours a day. The shipments of their products resulting from these conditions of activity reach distributing points in all quarters of the globe.

Alfred Field & Co., 93 Chambers Street, New York, state they are almost daily in receipt of inquiries from their correspondents abroad for catalogues and quotations on such lines of Hardware as may be classed under the head of "Domestic Goods and Novelties." At present they are arranging an assortment of samples of such wares, destined for distribution among their agents abroad. They state they would be pleased to hear from any American manufacturer who would be interested in extending their sales in that direction. This old-established house are notable pioneers in the importing and exporting business of this city, and are admirably equipped with intelligent correspondents in all quarters of the world to further the ambitious aims of American manufacturers for a foreign outlet for meritorious specialties.

Kimball Bros. Co., Council Bluffs, Iowa, have established an Omaha branch of their extensive business by purchasing the plant of the Omaha Electrical Works, at that place. This well-known company are manufacturers of Passenger and Freight, Hand, Electric and Belt Power Elevators, running in size from a Dumb Waiter to a ten-ton Electric, and the addition of the facilities afforded by their recent purchase, places them in position to fill orders, especially for Electric Elevators, with a commendable degree of promptness. They desire to open correspondence with any of our readers needing an elevator, feeling confident it will prove of mutual benefit.

New Departure Bell Co., Bristol, Conn., for whom John H. Graham & Co., 113 Chambers Street, New York, are sole representatives, have recently added to their number of productions by putting on the market a full line of Brass Compression Bibbs. They desire an inspection by the trade of the fine finish and high grade of the product. Orders for Racking Cocks are being booked, which they expect to have ready for shipment by August 1st, and a month later will have lines of Liquor Cocks and similar goods.

The Iowa Farming Tool Co., Fort Madison, Iowa, are issuing weekly in the interest of exploiting their fine line of special goods, neat, artistic leaflets, printed in the most tasty style imaginable. The latest we have received is styled "Fine Stable Goods for Fine Horses." On the inside are two cuts, one showing their English stable fork, made in 3, 4, 5 and 6 tine patterns, with blue points and silver polish, and the other showing the Bonner Stable Fork, of white hickory, bent and seasoned. Those interested in something "extra choice" in this line of goods would certainly order after seeing this artistic leaflet.

The Cleveland Pneumatic Tool Co. have opened a New York office at 15 Cortlandt Street, which will be in charge of W. F. McGuire, and where will be found samples of their complete line of Chipping, Beading and Caulking Hammers; the Cleveland Long-Stroke Riveting Hammers, and their Piston, Rotary and Breast Drills will also form part of the equipment.

In the notice given in our previous issue to the new catalogue of the Marlin Fire Arms Co., New Haven, Conn., we neglected to mention that, outside of the trade proper, the Company would gladly mail any reader of *Hardware* a copy of the catalogue on receipt of his application accompanied by three cents in stamps to pay postage. Those interested in an artistically presented display of sporting goods will take due notice.

Orr & Smith Hardware Co., Painted Post, N. Y., succeed to the business of the old firm of Orr & Smith, the change of name being availed of when admitting to partnership O. F. Smith, who for four years past has been an indefatigable clerk in their employ. His many friends wish him prosperity in his promotion.

The fire loss of the United States and Canada for the month of June, as compiled by the New York *Journal of Commerce*, shows a gratifying decrease as compared with the figures of the preceding months of this year, being \$9,599,000, as against \$22,380,000 in the preceding month, and \$31,331,000 in June, 1900. The total loss for the first six months of the year, however, is very heavy, aggregating \$88,935,000.

# HARDWARE

VOL. XXIII.

JULY 25, 1901.

NO. 8

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in** should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

This being the usual dull season of the year, when travelers are mostly at home, and house salesmen and other employes are enjoying well-earned vacations, there is but little of a startling character noticeable in trade channels. Prices on Hardware lines of importance have been disturbed but little, and slight concessions on staples are scarcely anticipated to any extended degree, especially in the present condition of the labor market, the surface indications pointing toward the opposite tendency, if any.

Preparation however, is going forward on every hand for the approaching commercial campaign for Fall trade, every prospect for its successful inauguration having been until very lately of the most encouraging character. The strike now under way among the iron and steel workers of the Amalgamated Association, presents elements of apprehension regarding the industrial possibilities of the future, difficult to "whistle down the wind;" for should it continue to extend as it has since its recent inauguration, it will place in jeopardy so many industrial movements of significant importance as to create a fear for results that may prove extremely serious.

Many of the products of the companies involved in the strike constitute the raw material of special lines of goods in great demand for Fall and Winter trade. Full supplies at specified dates of material needed for the filling of current orders, would seem to be rendered difficult if not impossible under the present disorganized conditions. No heavy stocks of any class of material have been in process of accumulation at any of the various plants, the policy of keeping the manufacturers in a state of anxious

need for raw material having been deemed the most politic for the furtherance of a stable market.

Should the present unsettled conditions prove to be of long continuance, many plans for Fall delivery will become futile, and be barren of satisfactory results. Then again, the scarcity of material will make higher quotations certain, creating new conditions of cost on such stocks as are already in hand, and unsettle generally the commercial ease and comparative comfort which have been the prevailing conditions surrounding all Hardware markets.

The wide-spreading drought throughout so many of the Western and Southern States has unsettled the favorable estimates previously given of the corn, cotton and wheat crops, that may prevent the realization of those sanguine views which have created hopes of a profitable outcome. Based on these optimistic estimates, orders have already been rushed to the manufacturer for early delivery, the conditions as to quantity and delivery may have to be modified, which, taken in connection with the probable scarcity of material resulting from strike conditions, may cause a favorable average that will meet less objection than could otherwise be predicated.

The jobbers generally are banking on the belief the Fall trade this year will be an unusually heavy one, and this idea having been formed at an early date, many orders have been placed much earlier than in ordinary years.

Salesmen who have been fitting themselves up in good shape for the usual extended trips at this season of the year, have been held up as to an early start on the road, until something definite is learned of the untoward movement among the iron and steel workers and the probable effect on supplies. So many orders being accepted with an exemption clause based on conditions similar to those now prevalent, leaves the dealer in doubt as to supplies being forthcoming on time. This information will be anxiously awaited.

We are pleased to learn from later reports that the damage to the crops has in several sections been exaggerated, and but a slight diminution will probably prove to be the fact. It will be a great source of satisfaction to find this hopeful view sustained as the season progresses through the harvesting period. Collections are reported as being extremely favorable, giving very little trouble or anxiety.

## Visible and Invisible Profits.

It is admitted that we are all in business for the profit there is in it and not for our health or pleasure. Some of us, no doubt, in our experience, have found competitors who were apparently doing business for fun and we were unable for the life of us to see where there was anything else in it for them. The goods handled were exactly the same in quality and the salesmen were equally bright and competent so far as we could see. The fault was this: The goods were not bought upon the same basis. There is more real art and judgment in buying goods than there is in selling them. When a line of goods is owned by a jobbing house at a less figure than his competitors, you may well figure that you have already made a profit on them, although the amount made in dollars and cents does not yet appear upon your ledger as such.

Another source of profit is lost by every jobber in business, or such is the case at least with every jobber in the Northwest, where fully one-third of their sales are provisions, flour, cereals, dried fruit and produce, which are bought for net cash and sold on thirty days' time less a discount of 1 per cent. for cash in ten days. It is not too much to say that hundreds of thousands if not millions of dollars are given

away in this manner every year by the grocery jobbers of this country. A change of system or business customs is needed to stop this leakage of profit. Either the discount of 1 per cent. and the time of thirty days should not be allowed the trade, or the provision trade, the cereal trade and others should, by united effort on the part of the jobbers, be compelled to bill their goods on a per cent. and time basis. It would really inflict no hardship upon these several trades, for they would as soon sell flour at \$5.05 less 1 per cent. as to sell at \$5 net cash, or a barrel of pork for \$15.15 less 1 per cent. for cash as to sell at \$15 net, when the custom was once adopted. It would serve to raise the standard of cost and the invisible profit of cash discount would then materialize. To accomplish anything in this direction, united effort must be had.

Still another source of profit can be made by regulating the cash discount on teas. It has become customary with the jobbers to give 4 and 5 per cent. off for cash in ten days on teas or four months' time, and upon about 50 per cent. of their sales to make an advance dating of from one to three months, the sale in such cases being subject to cash discount within ten days from the dating.

The jobber secures only 3 per cent. in cash discount from the importer or middleman, and not infrequently he must give his four months' acceptance at once in settlement of his tea purchase without reaping any advantage whatsoever of the discount. Yet he will foolishly give away 1 and sometimes 2 per cent. to the trade on these goods. This may be termed an invisible loss if allowed or an invisible profit if saved. We again need united effort of the jobbers to correct this evil. Much, however, can be accomplished by the buyers at the head of the departments to gain this profit in purchasing. The terms and cash discount are often overlooked almost entirely by the buyer, as he knows from the manner most of the jobbers keep their books that the cash discount does not enter into the buyer's profits, but goes to discount account, which, by the way, ought to be one of the most carefully looked after accounts on the ledger. No jobber can afford to not discount all his bills, even if the discount is only  $\frac{1}{2}$  of 1 per cent. It is his first visible and sure profit. Volume of business is well enough and desirable, but profit, whether visible or invisible, is the vertebræ of any business and without it, there is no life.

C. R. RUST.

### General Export Figures of Manufactures, 1901.

Exports of manufactures from the United States appear to be slightly less in the fiscal year just ended than in the preceding year, the figures for the 11 months ending with May showing an apparent reduction of \$14,565,030. This statement, however, is misleading because the figures of the year 1901 do not include the exports to Porto Rico and Hawaii, which were included in former years, and which are largely manufactures and which will aggregate \$25,000,000 for the fiscal year. Were it possible for the Bureau of Statistics to include in its figures of exports of manufactures those sent to Hawaii and Porto Rico, the figures of 1901 would differ little from those of 1900.

Indeed, an analysis of the general export figures of manufactures for the 11 months now available shows in most cases an increase over 1900, and that the decrease is confined to a few articles and is due, in some cases at least, to a fall in price rather than a reduction in quantity. In illuminating oils, for instance, the export figures for the 11 months ending with May, 1901, show a decrease of four and a half million dollars in value, but an increase of nearly fifty million gallons, the accurate figures being: For 11 months ending with May, 1900, gallons, 663,554,528; value, \$51,753,797; and for the 11 months of 1901, gallons, 711,842,276; value, \$47,228,438. Two other great articles of our exports of manufactures show a reduction in 1901, as com-

pared with 1900, viz., copper and cotton manufactures, and these indeed, form the chief reduction in the grand totals for the year 1901, as compared with 1900. In the latter, cotton manufactures, the reduction is due entirely to temporary conditions in China. The total exports of cotton manufactures in the 11 months ending with May, 1901, are \$17,275,299, against \$22,030,583 in the corresponding months of last year, a reduction of \$4,805,284; while an examination of the figures of the exports of cotton cloth to China shows that they fell from \$8,258,946 in the 11 months of 1900 to \$3,004,727 in the same months of 1901, a reduction of \$5,254,219 in this item alone. Thus the reduction in the exportation of cotton manufactures is entirely accounted for in this single item of cotton cloths to China, where the reduction is, of course, but temporary due to the disturbances in that country during the first half of the fiscal year. The only remaining item in the list of exported manufactures which shows a material reduction is copper, which shows a fall of 63,721,840 pounds in quantity, and \$11,849,518 in value, during the 11 months ending with May, 1901, as compared with the same period of 1900, though the value of copper exports in 1901 is more than \$6,000,000 in excess of the corresponding months of 1899.

In a large share of the important articles of our exports of manufactures, the figures of 1901 show a marked growth over those of the preceding year and of any preceding year. In steel rails, for instance, the exports during 11 months of 1901 are more than \$2,000,000 in excess of the same months of last year; in pig iron there is an increase of a million dollars; in bars and rods of steel, an increase of a million and a half; in electrical machinery, a million and a half; in boots and shoes, over a million dollars; in cotton seed oil, nearly two millions; in carriages and cars, two millions; in chemicals, more than a million; in scientific instruments, a million dollars; while, as already indicated, in some cases where the values have decreased there is still an increase in quantities, the apparent reduction being due to the fall in price and not to a reduction in the quantity exported.

American manufacturers have, therefore, no occasion for anxiety regarding the slight apparent decrease in the export figures of manufactures in 1901, which is due: 1. To the fact that shipments of goods to Porto Rico and Hawaii, aggregating more than \$20,000,000 in the year just ended, are no longer included in the list of exports, as was formerly the case; 2. That the reduction of over \$6,000,000 in exports of cotton cloth and mineral oils to China may be looked upon as due entirely to temporary causes; 3. That in numerous instances the reduction is due to a fall in price while there has been an actual increase in quantity; and, 4. That in the principal item of decrease, copper, the figures exceed those of any preceding year except 1900, in which year the demand abroad for electrical works was far beyond that of any preceding year.

### Exposition in Japan.

The following is extracted from a letter to a resident of New York, by Consul Lyon, of Hiogo, dated June 5, 1901:

The proposed exposition in Japan will be held at Osaka from March 1 to July 31, 1903. The articles to be exhibited include agricultural, horticultural, forestry and water products; mining, industrial and mechanical exhibits; and those pertaining to education, science, sanitation, economy, and the fine arts. The articles shall be those collected, produced, or manufactured by the subjects of the Empire, or by foreigners residing in Japan. The cost of the exposition is to be paid by the imperial treasury, except the expenses of exhibiting, which will be borne by the exhibitors.

The rooster that does the loudest crowin's most always the one first caught by the hawk, says Simon Frost.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

## Accident on Freight Elevator.

**QUESTION:** My brother is employed by the owners of a certain building to run a freight elevator. There is an iron girder which projects into the elevator shaft and acts as a support to one of the floors of the building. My brother was not told anything about this, and when he took the elevator up his foot extended slightly over the edge of the platform and was crushed against the girder. The shaft was so dark that nothing could be seen. Could he recover against the owners of the building, his employers? The accident occurred in a town in Iowa.

**REPLY:** There has been a recent decision by the Supreme Court of Iowa, where the facts were very similar to the case you describe. (*Olson vs. Hanford Produce Co.*, 82 N. W. Rep., 903). In this case the Court held that the workman had a right to presume that his employer would do his duty to him, viz: furnish him a safe place in which to work and warn him of any danger not apparent. The Court also held that the question of whether the master under such circumstances as you describe was guilty of negligence in not guarding a girder of this kind was for the jury to decide, just as it was for the jury to say whether the plaintiff or employee was guilty of contributory negligence in allowing his foot to extend over the edge of the elevator. Whether or not your brother could recover damages remains for the jury to say. We are of the opinion, however, that he has a good cause of action. The result of such a trial, however, can never be predicted with any degree of certainty as the matter rests largely with the jury.

## Libel Tending to Injure One in His Trade or Occupation.

**QUESTION:** Some time ago I gave a house a large order for certain articles. When the shipment arrived I found that articles of an inferior grade to those which I had ordered had been sent me, but at the same price as the goods I had ordered. I wrote the house from whom I received the goods and told them that I would accept their shipment, but not at that price. We carried on some correspondence which resulted in this house refusing to do business with me. Shortly after this incident another dealer showed me a letter he had received from this house, stating that the house would no longer do business with me for the reason that when I received goods I always "squealed" at the price and refused to pay the full amount of the bill, and that I was not to be trusted. Kindly inform me whether this statement would enable me to sue this house for libel, as my reputation is excellent and this charge is absolutely false.

**REPLY:** We are of the opinion that to write of a business man that he always "squealed" at the price of goods after he had received them, and that he was not to be trusted is libelous per se as a statement tending to injure him in his trade, occupation or employment. Each libel case, however, must rest upon its own state of facts, and it is for the court or jury, as the case may be, to say whether or not the writing is libelous. If the statement is unquestionably injurious to one in the course of his employment it is as a matter of law libelous, and the injured person is entitled to recover without any proof on his part of any special damages he has sustained by reason of the publication of the libel.

## When a Foreign Corporation May Be Sued.

**QUESTION:** Kindly inform me through your valuable paper in what cases a foreign corporation may be sued in the New York courts.

**REPLY:** Section 1780 of the New York Code of Civil Procedure provides that an action against a foreign corporation may be maintained by a resident of the State or by a domestic corporation for any cause of action. An action against a foreign corporation may be maintained by another foreign corporation or by a non-resident in one of the following cases

only: First, where the action is brought to recover damages for the breach of a contract made within the State or relating to property situated within the State at the time of the making thereof; second, where it is brought to recover real property situated within the State or a chattel which is replevined within the State; third, where the cause of action arose within the State, except where the object of the action is to affect title to real property situated without the State.

## Ownership of Inventions of An Employee.

**QUESTION:** A superintendent of a shop has received a patent on an article which was an improvement on an article manufactured by the company by which he was employed as superintendent. The company had the right in and for a certain territory under a royalty agreement, to sell the original patented article. It has lately developed that the model made by the employee of the company, was made by him during working hours, with the employer's materials, tools and machinery. Kindly state what the legal status of the case is?

L. P.

**REPLY:** We are of the opinion that if an employee during the term of his employment and during office hours invents an improvement on an article used by his employer, or secures a patent on an article used in the course of the employer's business, that such invention is the property of the employer.

## Supplementary Proceedings—Requisites of Judgment.

**QUESTION:** Some time ago a judgment was obtained against me for \$20. I did not consider the claim a just one and refused to pay it. I have also managed to arrange my property in such a way that the execution was returned unsatisfied by the sheriff. I understand, however, that I may be examined in supplementary proceedings, and would like to know whether my judgment creditor would have the right to examine me in this way.

**REPLY:** In order to entitle the judgment creditor to maintain an examination in supplementary proceedings several matters are requisite: First, the judgment must have been rendered upon the debtor's appearance or personal service of the summons upon him, or by what is known as substituted service of the summons upon him; second, the judgment must be for a sum not less than \$25, and an execution must have been issued out of a court of record, as provided in Section 2458 of the New York Code of Civil Procedure. Unless, therefore, the judgment obtained against you amounted to \$25 or over, your judgment creditor would not have the right to examine you in supplementary proceedings, and, if the judgment was obtained against you in a court not of record, for instance, such as the Municipal Court of the City of New York, he would not be entitled to this examination, irrespective of the amount of the judgment obtained against you. If you are served with an order for your examination, you should at once take the matter to a lawyer and submit it to him.

## Japanese Swords.

The blades of Japanese sabres are formed of a metal prepared from magnetic iron ores and ferruginous sand. The steel is produced in the form of thin laminæ, and the workman commences by fixing one of these to the end of an iron rod, which serves as a handle. To these are soldered other sheets until the mass has a length of six to eight inches, a width of two inches, and a thickness of one-quarter to four-fifths of an inch. This bar, brought to a white heat, is doubled upon itself and hammered until it has taken its original dimensions. This process is repeated fifteen times. Four similar bars are then soldered together, doubled upon themselves, resoldered and heated, this operation being repeated five times. By this process the superposed layers of metal become so thin that a sabre is estimated to contain at least a thousand sheets of metal. Sometimes alternate layers of iron and steel are soldered together, and thus the blade presents a veined appearance.

### Decorative Art Exhibition in 1902.

Under the patronage of H. M. the King of Italy and under the Presidency of H. R. H. the Duke of Aosta, an International Exhibition of Modern Decorative Art will be held in Turin in the year 1902. The committee having the exhibition in charge has issued the following circular concerning it:

"Italy, remembering to have been in past times the mistress and inspirer of other nations in the art of decoration, wishes now to take part with her new artistic powers in the great beneficent movement of modern æsthetics, and through us invites to a noble competition all those who in the field of arts and industries have sought and are still seeking to give a form to these noble ideals.

"It is well known to us that the æsthetic revival in architecture and house-decoration has reached in North America the highest degree of development through the inspiration of eminent artists and the work of intelligent manufacturers.

"It is therefore our great desire that the artists and manufacturers of the United States, in bringing to us the original note of their decorative creations, may contribute largely to the solemn affirmation of the new style which we intend to promote by our exhibition.

"We trust that the American nation, so enthusiastic for the beauties of our country and so devoted to the study of our ancient art, will give to Italy on this occasion a new proof of her sympathy.

"The annexed programme and the following declarations will make our intentions clear:

"As this exhibition is not to be the reflection of other industrial exhibitions so oft repeated, neither reproductions of styles already known, nor simply industrial productions wanting of an artistic stamp will be admitted.

"It will only be open to original productions tending to the artistic renewal of the form.

"While leaving to the exhibitors the greatest liberty in their ideas, we think it necessary to call their attention to the programme which we have the honor of addressing to them.

"It is desirable that this exhibition should have a well specified and entirely new character. It is not a question of bringing together many objects of a different character, but rather producing the decorative whole in harmony with the essence of modern life.

"It is therefore to be hoped that the artists and workmen will not seek only the magnificent elegance of the princely dwelling, but that they will find simple and modest elegance in the complete decoration of the private house.

"An artistic jury will superintend the acceptance of objects so that nothing may be admitted that could alter the nature of our exhibition, and that the admission may in itself be a reward to the exhibitors, who will at once kindly send their adhesion to the Committee—Via Ospedale, n. 28, Turin (Italy).

"For the Committee: Count Ernesto Balbo Bertone di Sambuy, Senator of the Kingdom, and H. E. Tommaso Villa, President of the Italian Parliament, presidents; and Severino Casana, Senator of the Kingdom, vice-president."

#### PROGRAMME.

**First Class: The Modern House and Its Decorative Elements.** Section 1.—The painted, figured or ornamental decoration of rooms or their parts. (Oil or frescoed sketches of ceilings, friezes, panels, etc.) Section 2.—Plastic or figured decoration of rooms or their parts. (Ceilings, friezes, panels, etc., of all materials, stone, metal, terra cotta, plaster, sandstone, pasteboard, natural or composite woods.) Section 3.—Doors, windows, chimney-pieces, etc. Section 4.—Pottery. (Vases, artistic objects, bricks, floor-tiles, artistic tiles, etc.) Section 5.—Glass. (Vases, artistic objects, stained glass windows, painted glass.) Section 6.—Mosaics. (Pavements, friezes, panels, etc.) Section 7.—Stuffs, carpets, tapestries, galloons and braids. (Decorative tissues and stuffs of all kinds. Artistic hangings.) Section 8.—Lace, embroidery, table-linen. Section 9.—Wall papers, etc. Section 10.—

Leather and imitations. (Painted, stamped and embossed.) Section 11.—Artistic basketwork. Section 12.—Metals. (Engraved, embossed, beaten, melted.) Section 13.—Arms and their accessories. Section 14.—Warming apparatuses and their accessories. (Stoves, hot-air gratings, etc. Fire-dogs, shovels, tongs, guards, etc.) Section 15.—Lighting apparatuses. Section 16.—Furniture. Section 17.—Furnishing items. (For the table, kitchen, toilet, etc. Clocks, etc.) Section 18.—Silver, jewelry, enamels. Section 19.—Medals, money, decorative plates, seals, plaquettes. Section 20.—Graphic arts. (Posters, sketches, ex libris, stamps, initials, headings, tail-pieces, cards, tickets.) Section 21.—Artistic prints, book-illustrations. Section 22.—Art of book-binding.

**Second Class: The Modern Room in Its Decorative Whole.**

Section 23.—Rooms or complete apartments. (The complete whole of one or more rooms. Pavements, walls, ceilings, furniture, items and accessories for the use of the room or apartment.)

**Third Class: The House and Street in Its Decorative Whole.** Section 24.—Plans of buildings and of their parts. (Distribution of rooms.) Section 25.—Plans of streets, squares, gardens, bridges, porches, etc. Section 26.—Exterior decoration of the house and street. (Designs and models of railings, balustrades, posts, door-knockers, door-handles, fountains, sconces, lanterns. Summer-houses of all kinds, benches, house fronts, etc.)

### Acetylene Gas and Its General Adoption.

Many prominent hotels, it is reported, especially at Summer resorts, have adopted acetylene as a means of lighting, and it is also beginning to come into use largely for street and town lighting. Recent developments in acetylene have caused a change in the method used. Formerly the dry process took precedence over the wet; by this is meant the dripping of water upon an excess of carbide, whereas, the method most approved by the highest authorities to-day is the feeding of granulated carbide into an excess of water.

The change was brought about through the persistent efforts of scientists, who were instrumental in influencing the carbide manufacturers to offer on the market crushed carbide suitable for this class of generators. The carbide is placed in a conical receptacle over a water holder, and this is fed into the tank of water automatically as the gas is used. The gas holder regulates the carbide valve with a positive action. These machines are made in various sizes to suit every purpose for ordinary illumination, from a portable lamp to a plant suitable for town lighting.

A great many people building fine houses in the country, at some distance from towns or villages, take the precaution to have gas pipes put in during the course of construction on the theory that some time there may be a gas plant near enough to provide them with light. Sometimes gas works are erected in the vicinity, and quite as often not. Since the introduction of acetylene gas, the generators for which can be carried about and planted anywhere, many of the owners of such houses are availing themselves of the new gas.

Experiments by eminent European physicians prove that acetylene does not form any combination with the blood; that it has no specific poisonous action, and is much less dangerous in every way than ordinary illuminating gas.

The rays of acetylene gas being more diffusive than those of any other illuminant, and being in quality equivalent to sunlight, it is not necessary to use as much as ordinary gas. It adds less carbonic acid to the atmosphere. An ordinary gas burner produces carbonic acid equal to that in the exhalations of eighteen adults, while acetylene gives off but one-sixth that amount, leaving no injurious effects, and it heats the atmosphere of a room much less.

Comparisons of deadly and explosive materials and their likelihood to cause fire show that kerosene, gasoline, benzene, city gas indoors and in street mains, electricity, steam boilers, gunpowder and thousands of chemicals and substances in every-day use and which the world could not conveniently get along without, are far more dangerous than acetylene gas.—*N. Y. Commercial*.

### Monongahela Valley Retail Hardware Dealers' Association.

The retail dealers of the Monongahela Valley having formed an organization of retail Hardware dealers under the name of the Monongahela Valley Retail Hardware Dealers' Association, among the important preliminary work made necessary by their action they have issued in pamphlet form the following:

#### LETTER TO JOBBERS AND MANUFACTURERS.

With a view to inducing manufacturers and wholesale Hardware houses to sell only to legitimate Hardware dealers, the following letter has been prepared and is being sent out by members of the association:

An organization of the retail Hardware dealers of the Monongahela Valley has been formed under the name of the Monongahela Valley Retail Hardware Dealers' Association.

We inclose you a copy of the constitution and by-laws of this association, and respectfully ask that you carefully examine same. We believe that this examination will result in your giving the cause your hearty sympathy, and that you will co-operate with us in working together for our mutual good.

The aim of the association, which we believe is a legitimate one, is explained in the preamble to the constitution. The condition of the retail Hardware business at the present time is to say the least, alarming and the future outlook is anything but bright. What we ask, and we feel that we are not asking too much, is that manufacturers and wholesale Hardware houses sell to none but legitimate retail Hardware dealers.

Further the members of the association have resolved to confine their purchases as far as practicable to manufacturers and jobbers who co-operate with us in this matter, and who sell to none but legitimate retail Hardware business.

We feel confident that a thorough investigation of existing conditions will prove that our position is justifiable, and that the Hardware manufacturers and jobbers will gladly give us their support. Our cause is spreading throughout the State, and in order to concentrate our efforts along this line, we hope in a short time to have the retail Hardware dealers of the State united in one association for the betterment of the trade, realizing that in union there is strength.

Incorporated in the pamphlet they present their constitution and by-laws, together with the following preamble and resolutions:

#### PREAMBLE.

The Monongahela Valley Retail Hardware Dealers' Association is intended to include in its membership all legitimate Hardware dealers throughout the Monongahela Valley and vicinity.

The trade recognize the desirability of an organization and the need of closer social and business relations, realizing that much unjust competition arises from misunderstandings and imaginations therefrom.

We also feel the need of some protection from the indiscriminate sale of goods by manufacturers and wholesale houses to those who are not in the regular trade and are not entitled to recognition as Hardware dealers from manufacturers and jobbers.

#### RESOLUTIONS.

Whereas, Some manufacturers and jobbers in general Hardware, Stoves, Tinware, Paints, Leads, Oils, Varnishes and kindred lines pertaining to the Hardware business persist in selling their goods through illegitimate channels, placing us toward our customers in the light of extortioners and causing a general demoralization in the retail Hardware trade,

*Resolved*, That the members of this association confine their purchases of Hardware, Stoves, Tinware, Paints, Leads Oils, Varnishes and kindred lines as far as practicable to manufacturers and jobbers who sell goods to firms only that are legitimately engaged in the retail Hardware business as defined in these resolutions.

*Resolved*, That any manufacturer or jobber in Hardware, Stoves, Tinware, Paints, Leads, Oils, Varnishes and kindred

lines, furnishing net prices or discount sheets contrary to the foregoing resolutions either by themselves, employees or agents, shall be considered by disapproving of these resolutions.

*Resolved*, That it is injurious to the retail Hardware dealers of this association for manufacturers and jobbers to make estimates or quote net prices direct to the consumer for Hardware, Tinware, Paints, Leads, Oils, Varnishes entering into the construction of buildings or for private use, and that all such estimates or net prices shall be made through a legitimate Hardware dealer.

*Resolved*, That every member of this association constitutes a committee of one, and is expected to report to the proper officers any violations of these resolutions.

*Resolved*, That these measures are just and necessary for our welfare and it is expected that the rigid enforcement of the resolutions will be carried out.

### The First Threshing Machine.

A contributor to the London *Ironmonger* wonders how many implement dealers could say off-hand how long ago the threshing machine was invented, and then proceeds as follows:

"Steam driven appliances of this kind had almost entirely superseded the flail when I was an infant, but I should scarcely have thought that the pioneer apparatus was set to work so long ago as June, 1801. According to a paragraph in the *Times*, however, the honor of inaugurating mechanical corn (wheat) threshing belonged to a former Duke of Bedford, who, on the occasion of his agricultural meeting in June, 1801, showed visitors a mill which threshed grain, the chaff going one way, the dirt and dust another, while the corn (wheat) fell into a sack and the straw into a wagon. The 'mill' was worked by two horses with two men to feed it. Is there any record of the date when steam began to supersede horses as the motive power?"

According to the *Encyclopedia Britannica*, which ought to be recognized as authority in England, a threshing machine was invented and patented by one Michael Menzies, a Scotchman, prior to 1743. The exact date is not given. This machine was inspected at work by a committee representing the Society of Improvers in the Knowledge of Agriculture, and afterward recommended by the society to "all gentlemen and farmers." The first successful threshing machine was invented in 1786 by another Scotchman named Andrew Meikle. Historians appear to have overlooked the achievement of the Duke of Bedford.

The use of steam power for agricultural purposes, according to another authority, began in England in 1842, and in this country a few years later, although steam power did not come into general use for threshing in this country until after the Civil War.—*Farm Implement News*.

### The Final Touch.

The success of the advertisement rests, in a great measure, with the make-up of the paper in which it appears. It is there that the final touch, for good or evil, is given. Your best advertisement of the season will lose half its effect if it is crowded in between two others, perhaps equally good, but of a design or style to clash or jar with it and each other, while an only moderately well-constructed advertisement will appear well, if advantageously placed.—*Fame*.

Since England has become an important market for American dressed beef, and since Germany and France have admitted it without invidious restrictions, and Western beef has largely superseded Eastern beef in the Eastern market, the railroads of this country have had a large business in the transportation of meat products. Last year they carried 25,000,000 tons of these—15,000,000 tons of live stock, 5,000,000 tons of dressed meats and 5,000,000 tons of packing house products, of which ham, lard and bacon are the chief.

A team o' horses is only as fast as the slowest one o' the pair, says Simon Frost.

## CONSULAR COMMERCIAL COMMENTS.

### DEMAND FOR WELL-BORING MACHINERY IN TURKEY.

On account of the almost complete deforestation of the mountains about Harput—the total absence, in fact, of anything corresponding to the American or German meaning of the word “forest”—successful agriculture in this region depends, to a large extent, upon irrigation. The point has been reached where there is no longer an adequate supply of water from mountain springs for the needs of Harput, Mezreh and adjacent territory. Were sufficient capital available, much of the arable land could be readily irrigated by a proper diversion of water from the Murad Su, or eastern branch of the Euphrates.

In view of present conditions, the governor-general and other officials feel that the time has come to test the efficiency of artesian wells, and one of the members of the provincial council, the leading capitalist of the region, is ready to supply the money necessary to settle the question. Correspondence is solicited from American manufacturers of well-drilling machinery, as well as from those supplying wind-mills, pumps and accessories.

Naturally, for this region, simply constructed machinery is desirable, in order that repairs may be easily made. It is true, there are a few mechanics here, trained in New England machine shops, but mechanical facilities are sadly inadequate. A style of drill capable of being transported on its own wheels from the seaboard to this point would be eminently advantageous. It would be well for corresponding firms to indicate the number of cubic feet their different styles of machines occupy when packed for sea transportation and the total weight. There should also be full information with regard to tubing and all other accessories.

The capitalist above mentioned would prefer to make some arrangement, if possible, by which he need pay only the expense of boxing, transportation both ways, rent while out of the country, and wear, tear and depreciation, in case of non-success in striking water. He is ready to deposit in advance, with the Banque Ottomane, or at this consulate, the full price of a drill, paying all the accompanying expenses, with privilege of returning the machine, subject to above costs, in case of failure. In default of some such arrangement, he will have to accept the best terms available.

There would undoubtedly be a steady demand for drills should success follow this experiment, not only in the Harput plain, but also in many arid and semi-arid regions adjacent to the numerous mountain ranges of this country.

In connection with the proposed experiment, I have examined the topographical and geological conditions with some care. The Harput plain borders on the Taurus Mountains, which rise along its southeast border to the height of 2,500 to 4,000 feet above the level of the plain. Mezreh is at an altitude of 3,800 feet above the level of the sea. The plain is a deep, lacustrine deposit. The Taurus, as well as lower ranges on the northwest, consists of limestone, with frequent basalt dikes and caps of granite. Slate is not infrequent, as well as an occasional lava field. I have been unable to encounter parallel strata of clay, so desirable in well boring, but the location of limestone strata and the force with which water issues from openings therein are favorable indications.

Reforestation and the effective utilization of the abundant supply of water in the Upper Euphrates would restore to this region its agricultural wealth of two thousand years ago. Existing conditions seem to render this impossible, but artesian wells, if feasible, will bring needed relief at a moderate outlay.

Correspondence may be directed to this consulate.

THOMAS H. NORTON, Consul.

HARPUT, May 13, 1901.

### BUILDERS' ASSOCIATION IN AUSTRIA.

The following has been received from Consul Hughes, of Coburg:

The master builders of Austria have determined to petition the government to allow the establishment of a national master builders' chamber (to a certain extent after the pattern of the chambers of commerce). The objects are to unite the master builders of the empire; to guard their interests legislatively and otherwise; to give information to the government as to building, labor, etc., and to see that the building regulations are observed. The government, it is reported, will do everything in its power to promote the undertaking.

### DENSITY OF POPULATION OF FOREIGN COUNTRIES.

Consul-General Guenther writes from Frankfort, April 26, 1901:

The *Cologne Gazette* recently published the following figures of the population of various countries and number of persons per square kilometer, based upon the latest census taken:

Country.	Year.	Population.	Per square kilometer.*
Russia .....	1897	128,961,691	5.9
United States.....	1900	76,215,129	8.4
German Empire.....	1900	56,345,014	104.3
Japan .....	1898	43,760,754	114.4
Great Britain and Ireland.....	1900	40,909,925	132.
France .....	1898	38,745,000	72.3
Italy .....	1898	31,573,582	106.6
Austria .....	1900	26,107,304	87
Hungary .....	1900	19,203,581	59.6
Spain .....	1897	18,089,500	35.9

\*1 square kilometer = 0.3861 square mile.

### DEMAND FOR LAMPS IN BRITISH INDIA.

Consul-General Guenther writes from Frankfort, May 7, 1901, as follows:

According to Informations et renseignements de l'Office national du commerce extérieur, there is a strong demand for cheap, simply constructed lamps in British India. The article adds that the old means of lighting are being rapidly superseded by modern methods, and that manufacturers of cheap lamps may find it to their interest to correspond with importing firms at Calcutta and Bombay.

### GERMAN COMMERCIAL ASSOCIATION IN JAPAN.

Consul-General Guenther, of Frankfort, June 4, 1901, says:

A report from the German consul-general at Yokohama states that the German merchants of Yokohama and Tokyo have formed an association for the purpose of promoting German commercial interests in Japan. The association will also act in conjunction with similar German bodies in eastern Asia and keep in touch with the East Asiatic Association of Hamburg. This new association has taken steps for the publication of a weekly newspaper in German. The German firms in Japan have guaranteed an annual amount of 6,000 yen (\$3,008) for a period of three years.

### EXHIBITION AT DESSAU, GERMANY.

Consul Warner reports from Leipzig, June 6, 1901:

A general industrial and agricultural exhibition will be held at Dessau, Anhalt, from the 28th of September to the

7th of October, 1901. Detailed information may be obtained by writing to "Das Austellungs Bureau, Hotel Kaiserhof, Dessau."

#### TESTING AGRICULTURAL IMPLEMENTS IN RUSSIA.

Deputy Consul-General Hanauer, of Frankfort, under date of June 13, 1901, quotes from the German press that the Imperial Russian Agricultural Association has established on its model farm near Moscow, a depot for testing agricultural machinery and implements, in order to learn which are the most suitable for Russian farm use. Manufacturers who wish to enter their machines for these tests are required to pay from 500 to 1,000 rubles (\$257.50 to \$515). This fee entitles them to enter all their machines for a period of three years, and, in addition, to a space of 375 to 750 square feet in the exhibition building at the farm. The results of the tests will be made public, and the cost of printing and other outlays will be defrayed by the association, which will also bear the expenses incurred in taking care of the machines and their insurance against fire. Applications for entry should be addressed to Prince Alexander Scherbatoff, president of the society, Moscow.

#### TRADE OPENINGS IN THE TRANSVAAL.

Under date of June 12, 1901, Consul-General Guenther reports from Frankfort:

The Belgian consul at Johannesburg says that there will soon be openings for the sale of the following goods in the Transvaal: Axles of steel and iron for locomotives, railroad cars and other vehicles; wagon springs and oil and grease boxes; all the various materials for narrow-gauge railroads; implements for agriculture and forestry; also rolling cars for mines, drawbridges, etc.; hoists and hoisting machinery for mines, pumps, ventilators and other mine appliances; cutlery of all kinds.

#### Pacific Coast Hardware and Metal Association.

The sixth annual convention of the Pacific Coast Hardware and Metal Association was held at Tallac, Lake Tahoe, Cal., on June 17, 18 and 19. The meeting was well attended, all except three of the houses in the membership being represented. It was conceded to be one of the most harmonious and enthusiastic of all the meetings held since the organization of the association.

Matters of general interest to the Pacific Coast trade were considered, and full and lengthy discussion of the present industrial conditions was indulged in by the members present. Owing to the death in February last of the president of the association, Charles F. Tay, Brace Hayden, of the Dunham, Carrigan & Hayden Co., at the request of the members, had prepared a report, which he read at the meeting, detailing the work done by the association as coming under his observation as a member of the Advisory Board and Executive Committee.

In the opinion of Mr. Hayden, taken as a whole referring to existing market conditions, present prices are reasonable, the demand for goods active, and the consumption would not be greater if prices were lower. Mr. Hayden stated that instead of being a disturbing factor, the opinion was generally entertained that combinations of capital in the industrial world had given stability to the market, and had kept prices at a moderate and reasonable level. Mr. Hayden spoke very strongly with reference to the necessity of associations, being of the opinion that under present conditions they are of vital importance. The secretary, Thomas P. Smith, rendered a report, giving more of the details of the work of the association.

At the close of the business proceedings on Tuesday, A. A. Watkins moved a vote of thanks to the retiring secretary, Mr. Smith, for the good work accomplished by him as secretary of the association. The motion was unanimously carried.

The business meetings were held on the day and evening of Monday and Tuesday, and on Wednesday the association enjoyed an interesting picnic and trip on the lake, starting out in launches and rowboats for Rubicon Park, a very beautiful spot on Lake Tahoe, about eight miles from Tallac. The

occasion was a most enjoyable one, the members of the party while fishing succeeding in catching fully a hundred trout, averaging in weight from 1 to 4 pounds. After partaking of an excellent luncheon, which had been prepared by the proprietor of the Tallac House and served by waiters sent from the hotel, the party formed a circle under the trees, and A. A. Watkins, of the firm of W. W. Montague & Co., San Francisco, in an appropriate speech, presented to Thomas P. Smith, who had tendered his resignation as secretary of the association, a very beautiful souvenir in the form of a solid silver loving cup, measuring about 18 inches in height. Mr. Watkins highly complimented Mr. Smith on the work which he had done as secretary of the association, and expressed the regret of all the members at his resignation.

Mr. Smith, who resigned his position for the purpose of entering business with the Turner Hardware Co., Muskogee, Ind. Ter., of which corporation he is vice-president, responded with considerable feeling and expressed his sincere regret at severing his relations with the members of the Pacific Coast Hardware Association, which have been so pleasant for the past three years.

H. W. Barnard, who for the past three years has been engaged with the American Steel & Wire Co., in San Francisco, is to succeed Mr. Smith as secretary of the association. Mr. Barnard's connection with Frank L. Brown, one of the prime movers in the organization of the Pacific Coast Hardware and Metal Association, puts him thoroughly in touch with the work he will have to perform, and will undoubtedly make a most efficient and worthy secretary.

The following named gentlemen were elected as officers for the ensuing year:

President, Brace Hayden, Dunham, Carrigan & Hayden Co., San Francisco, First Vice-President, T. D. Honeyman, Honeyman Hardware Co., Portland, Ore.; Second Vice-President, L. C. Scheller, Union Hardware & Metal Co., Los Angeles, Cal.; Third Vice-President, E. B. Burwell, Seattle Hardware Co., Seattle, Wash.; Treasurer, Frank J. Baker, Geo. H. Tay Co., San Francisco; Executive Committee, Wakefield Baker, Baker & Hamilton, San Francisco; A. A. Watkins, W. W. Montague & Co., San Francisco; A. L. Scott, Miller, Sloss & Scott, San Francisco; Wm. R. Wheeler, Holbrook, Merrill & Stetson, San Francisco; H. J. Morton, Geo. W. Gibbs Co., San Francisco; Geo. S. Scovel, Lloyd-Scovel Iron Co., San Francisco; E. W. A. Waterhouse, Waterhouse & Lester, San Francisco.

The members were very enthusiastic and unanimous in the selection of Mr. Hayden as president of the association, as they recognize in him an ideal man for this position. Mr. Hayden has already served as president for nearly three years previous to the election at last year's meeting of Mr. Tay, when he declined further election. At the earnest solicitation of the members he has again consented to serve, and will, without question, give to the work the same earnest attention as during his past terms.

#### Ohio Comparisons.

Advertising is the fertilizer of trade. Use it plentifully and judiciously and your business trees will thrive and grow as surely and as wonderfully as the stately oak develops from the modest acorn. One new branch will quickly follow another, the foliage will become denser and the fruit more plentiful. As your tree grows the soil must be constantly kept rich—money fertilizer must be used. Let the quantity be reduced or allow the quality to become inferior and you will quickly discover withering limbs and unfruitful branches. Stop fertilizing altogether and the roots will decay, dry rot will set in and your once beautiful tree will soon be a fit subject for the assignee's or the auctioneer's ax.—*Steubenville (O.) Press.*

The Philosopher says: "Shallow water's always the roughest; it's the deep spots that are most always smooth."

### Newspaper Development.

When the yacht "America" first won the cup from England, in 1851, the news was not printed in the newspapers here until two weeks after the event, and it then appeared briefly in dispatches from Halifax, where the accounts had been received by mail. Such a race to-day would be cabled to this country to the extent of thousands of words, and the news would be printed and on the streets within a very few minutes after the race was completed. In the press reports of the yacht race off Sandy Hook in 1899, the results were communicated by wireless telegraphy as rapidly as they occurred, and by signals from reporters who made their observations in balloons. In fact, some of our enterprising newspapers published the results, with more or less accuracy, before the events occurred. The latest practical development in this direction is the recent announcement of the New York *Herald* that on and after July 1 next it will report the arrivals of incoming steamers by wireless telegraphy from Nantucket Shoal Lights, thereby communicating this information to the people on land some twelve hours earlier than it has previously been received.

D. O. HAYNES.

### PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

#### Patents Expire June 8, 1901.

- 301,473. WHEELBARROW, J. Bean and R. Bean, Springfield, O., assignors to The Tricycle Mfg. Co., same place.
- 301,474. COMBINED LATCH AND LOCK, C. Bergeron, New York, N. Y.
- 301,503. SCISSORS OR PENCIL HOLDER, J. P. Lindsay, New York, N. Y.
- 301,592. SASH-FASTENER, H. L. Fleming, Troy, N. Y.
- 301,595. DUST-PAN, C. Hodgetts, Chelsea, assignor to A. L. Hollander and C. H. Bradshaw, both of Somerville, Mass.
- 301,649. REVOLVER, J. Warnant, Liege, Belgium, assignor to Colts Patent Fire-Arms Mfg. Co., Hartford, Conn.
- 301,680. WRENCH, J. H. Coes and F. L. Coes, Worcester, Mass.
- 301,681. WRENCH, Loring Coes, Worcester, Mass.

#### PATENTS ISSUED JULY 9, 1901.

- 677,894. SHUTTER-WORKER, James Norton, Springfield,
- 677,920. LIFTING-JACK, J. M. Babbitt, Carthage, Mo., assignor of one-half to Davis Hill, same place.
- 677,937. WRENCH, William H. Burr, Philadelphia, Pa.
- 677,950. DUST-PAN, Charles W. Cutter, Denver, Colo.
- 677,964. COMBINATION-TOOL, F. H. Engstrom, Cambridge Springs, Pa.
- 677,981. COMBINED SASH LIFT AND LOCK, C. H. Hawkinson, Chicago, Ill.
- 678,051. SCRUBBING-BRUSH, J. B. Schweiger, Beaverdam, Wis.
- 678,062. MAGAZINE-HAMMER, Grove S. Tarbell, Lockport, Ill.
- 678,165. LAUNDERING-IRON HEATER, Hermann Orueger, Roanoke, Va., assignor of one-half to Marcellus N. Moorman, Jr., and Ed. Purcell, Jr., same place.

#### PATENTS EXPIRED JULY 15, 1901.

- 301,850. KNOB-ATTACHMENT, J. Bardsley, Newark, N. J.
- 301,881. LIFTING-JACK, A. T. Goodloe, West Harpeth, Tenn.

isn't enough to show whether a paint is good or bad. Time is the test that brings out the truth of paint claims.

If a paint covers well on the side of a house; if it brushes out easily and smoothly; if it wears well and withstands the elements, it's good paint.

But you can't ask your customers to make a test of that kind and run the risk of their finding the paint worthless. You'd lose their trade and their influence.

The thing to do is to sell them a paint that others have tested in this way for years and that has proved itself invariably good.

- 678,583. PLIERS, W. A. Osley, Wethersfield, Conn.
- 678,604. SASH HOLDER AND FASTENER, O. Williams, St. Johnsville, N. Y.

Statistics show that estimating the population of the country at 75,000,000 would make an average of one liquor seller to every 114 of the population. During the last year 25,202,901 bushels of grain and 2,198,513 gallons of molasses were used for the manufacture of liquor in this country, which produced 107,618,120 gallons of spirits and 1,657,808 gallons of rum, making a total of 109,275,928 gallons, which is about one gallon and a half to every man, woman and child in the country.—*Exchange*.

Scarcity of hemlock bark is reported to have caused the almost total extinction of the once prosperous tanning industry in Maine. Though there is a large growth of hemlock in the State, it is so far from practicable tannery sites that the cost of hauling prohibits its use.

### Trade-Marks, Labels and Trade-Names.

Beginning with this issue, we shall publish a series of articles on the subject of Trade-marks, Labels and Trade-names, the relation of the same to commerce, and the necessity of them in establishing and maintaining trade.

Those who are now using trade-marks and trade-names as a means of enabling the consuming public to distinguish their manufactures from the thousands of others, are under the impression, that, because the Government maintains a registration bureau for trade-marks, and issues certificates for such trade-marks as are registered, such trade-marks so registered are protected against infringements and that such registration in itself gives them the exclusive right to the use of the particular trade-mark they have registered.

Section 10, of the Act of Congress of 1881, which created the present registration bureau, reads as follows:

"That nothing in this act shall prevent, lessen, impeach, or avoid any remedy at law or in equity which any party aggrieved by any wrongful use of any trade-mark might have had if the provisions of this act had not been passed."

It is and always has been in this country, a thoroughly established, although not generally understood, principle, that the exclusive right to the use of a trade-mark, name or label, is, and can be, acquired, only by the priority of, and continued use of such name, trade-mark or label; they are not Governmental grants, and registration at the Patent Office does not confer any special privilege or right upon the owner.

Another thoroughly established, though not generally understood, principle, is, "That no man shall be allowed to so dress his goods as to be able to dispose of them as the goods of another." It makes no difference whether a man adopting a new name, innocently or intentionally adopts one that is an infringement of, or simulates one already in use, he can be stopped from using that infringing or simulating name, and be compelled to pay damages.

It is, therefore, apparent at once, that there should be a bureau conducted by the Government, or by private enterprise, that has on file, if possible, all of the trade-marks, names and labels in existence, in order that any one about to adopt a new name, or to extensively advertise either a new or old brand of goods, could ascertain whether or not he had the exclusive right to the name, trade-mark or label which he is about to use on that brand.

Under the common law, any one whose business is confined to the State in which he resides, or to commerce with other States, is protected as thoroughly in the exclusive right to the use of a name, or trade-mark that belongs to him, as the one who is doing business with foreign nations. The Act of 1881, limits the registration of trade-marks to those who are doing business with foreign nations, or with the Indian tribes. The trade-marks which constitute the plant at Washington, of which a search is supposed to be made, is, therefore, limited to trade-marks of those concerns who have sworn that they are doing business with foreign nations, or with an Indian tribe, so that there is on file in Washington, only a very small percentage of the total trade-marks, names and labels that are in use in this country; and a man who will swear that he is doing business with foreign nations can go to Washington to-day and register a trade-mark that has been in use for thirty years by some one else, who is not doing business with a foreign nation and therefore, cannot register at Washington, or, who may be doing business with foreign nations and has not registered at Washington. He does not, however, by his registration there, acquire any right in that name, trade-mark or label; the party who was first to use it can stop the other, or others, from using it, irrespective of whether or not it is registered at Washington, and a search of the files at Washington, necessarily would not disclose the fact that the trade-mark about to be registered is already in use by some one who is not doing business with foreign nations.

Another astonishing fact in connection with the registration bureau at Washington is that there have been hundreds of names and trade-marks accepted for registration there, which were absolute duplicates or infringements of trade-marks that had previously been accepted and registered as such; some of these not more than a week apart. In other words, so far as registration under any system is concerned, the only value that can attach to simple registration is a reasonable degree of certainty of the prevention of one man innocently adopting a name or trade-mark that is already in use, and to which some one else has the exclusive right; this cannot be obtained at Washington for the reasons, first, that only those doing business with a foreign nation can register at Washington; and in the second place, owing to lack of method, or lack of knowledge on the part of the employees of that particular branch of the Patent Office, duplicate names and trade-marks are constantly being registered there by those who are doing business with foreign nations.

A great deal of space has been devoted by the press of this country in decrying the evils which exist, but no practical remedy has been suggested by them.

We should be glad to receive communications from our readers and advertisers, on any questions connected with this very important subject, which we will answer separately or embody the information desired in subsequent articles which will appear in *Hardware*.

### The Smallest Engine in the World.

An engine has just been completed which is probably the smallest engine in the world. It is a horizontal engine and stands on a piece of metal exactly the size of a 10-cent piece. The quality of the workmanship on the tiny machine is indicated by the fact that when completed and put together and connected with the power it started off as nicely as the most accurately adjusted engine ever built. The materials used in the construction of the engine are gold, silver, copper and steel. The band of the fly-wheel is solid gold. It will be interesting to note some of the dimensions of the parts of this very small machine. It being such a tiny affair, the measurements are all made in sixty-fourths, thirty-seconds and sixteenths of an inch. The steam chest measures 6-62x9-32 and the cylinder 8-32x9-32. The stroke is 6-64 and the extreme length of the main shaft, which is of steel, is 5-16. The diameter of the fly-wheel is 7-16 and the width of the fly-wheel band is 7-64. The diameter of the main shaft at its largest point is 3-64. The extreme length of the crank shaft is 4-16 and the diameter of the crank wheel is 6-32. The extreme outside diameter of the cylinder, which is sheathed with ebony, is 3-16, and the bore of the cylinder is 5-64. The diameter of the feed pipe, which is made of silver, is 2-32; that of the valve rod is 1-64 and that of the piston rod is less than 2-64. Completed the engine weighs three penny-weights.—*The American Exporter*.

Foreman of the quarry gang—"It's sad news Oi hev for ye, Mrs. McGinty; y'r husband's new watch is broken. It was a fuine watch, and it's smashed to pieces!" Mrs. McGinty—"Och, murther! how did it happen?" Foreman—"Ye see, mum, he had it in his pocket when a ten-ton rock fell on him!"

"Gazzam has been going without his breakfast for a month to reduce his flesh," said Twynn.

"With what effect?" asked Tripplett.

"He is losing two pounds a week and is very much tickled over it."

"Well, if he keeps on at that rate, he'll be tickled to death."  
—*Detroit Free Press*.

Simon Frost oracularly remarks: "There's many a slip 'twixt the cup an' the lip, but most people I know uv does the slippin' after what's in the cup gits past their lips"

## RECENT TRADE PUBLICATIONS.

PETERS CARTRIDGE Co., Cincinnati, Ohio, are issuing for general distribution a four-page leaflet, exploiting their Loading Shells, illustrations of which are given in their natural colors, and King's Semi-Smokeless Powder, with details connected with its evident excellence, from the number of high scores referred to in this artistic leaflet, the color work on which is of a very attractive character.

EMMERT HARTZELL CUTLERY Co., LTD., Gettysburg, Pa., 24-page pamphlet catalogue, envelope size of the line of goods manufactured by this concern, who have made Butchers' Cutlery a specialty for a number of years. The contents show Butcher, Skinning and Sticking Knives, Boning and Trimming Knives, Bread Knives, Hunting, Steak Knives, both in scimitar and straight pattern, in several varieties, all of which are illustrated and fully described, list prices being given, and testimonials regarding the quality of their product being freely distributed through the pages of the catalogue.

PEERLESS STOVE AND RANGE Co., Columbus, Ohio. Pamphlet catalogue of 12 pages of their line of "Peerless" and "Peerless Queen" Gas Heaters manufactured by this company. They are handsomely displayed in the contents of the catalogue, with fine illustrations giving the natural appearance of the articles in question, giving every evidence of their being finely proportioned, possessing rich and elegant ornamentation, the general appearance being a handsome one and deservedly popular. In the line of goods represented, all the burners are of sheet steel in which the perforations are punched in the steel. For pipe connection, each burner is provided with a tripod in the bell with a brass mixer pin, every burner being guaranteed against "flashing back" or lighting in the mixer.

E. W. BLISS Co., Brooklyn, N. Y. Small pamphlet catalogue of the Presses, Dies, Shears and Special Machinery for all sheet metal work, manufactured by this well-known company. Reference is made to the many complete lines of standard machines and tools, every one of which is represented in the contents of this catalogue. The catalogue is handsomely illustrated, with clearly defined cuts, showing a large variety by the use of miniature engravings, and is evidently designed for distribution at the Pan American Exposition, as the company have an exhibition of their products in Machinery Building, Section 39.

GOSHEN MFG. Co., Goshen, Ind. Pamphlet catalogue of 16 pages, covering a line of Ladders, Step Ladders, Lawn Swings, Hay Slings, Fire Ladders, etc., of which they make a very extensive variety, marketed under the name of the Hill's Patent Self-Locking Step Ladder, the "Goshen A," the "Goshen Anchor," and the "Goshen" Bolted Step Ladders in all the various sizes, all of which are fully illustrated and described. They are also manufacturers of Boyer's Climax Step Ladder, which possesses several original features and single Ladders in several varieties, including the "Extension" and "Windlass." Painters' Trestles and Scaffolds are also illustrated and described, list prices throughout being given on everything shown.

MERIDEN CUTLERY Co., Meriden, Conn., issue a handsome little booklet of 16 pages, printed on excellent paper, deckle-edged, and well illustrated with half-tones, showing their most attractive styles of Cutlery handled by the Hardware trade, including Pearl Handled, with sterling silver trimmings, Celluloid and Ivory Handled, and "Anvil" brand carving knives in several varieties. A page is given to the illus-

tration of the style of packing carving sets, adopted by this concern for expensive goods; being laid out in silk-lined cases, for wedding presents and other similar purposes. Another page is given to the illustration of a number of novelties manufactured in fine stag handles, with silver bolsters and designed to be used for similar purposes. The company call attention to the fact that having been manufacturing cutlery since 1832, they have achieved the reputation of a high standard for quality, which a lengthened experience, indicated by that date, should undoubtedly entitle them to.

GOODELL Co., Antrim, N. H., have issued a very interesting booklet designed for distribution at the Pan American Exposition, in which is given a history of the company and its growth from the very earliest period, and this succinct and yet graphic history of a concern so well established is given in a pamphlet of only 12 pages, completely illustrated throughout with nearly thirty half-tone engravings to add to the interest of the story told, starting with the portrait of the Hon. David Harvey Goodell, president of this company, and showing on the next page the very modest plant of the Goodell Co. in 1857, followed by all the various additions that have been made since, and finishing up with interior views of their present plant, showing all the important offices and parts of their works as well as the successive stages of the manufacture of cutlery which has given them their present exalted reputation, all the excellent features and original methods being well illustrated and described. Those interested in the sale of table cutlery particularly should obtain a copy of this booklet, if not already in hand.

THE MALIN & Co., Cleveland, Ohio. Envelope size pamphlet catalogue of 20 pages, embracing in its contents their line of Steel, Copper and Brass Wire of all kinds; also Patent Spool Wire for the retail Hardware trade, and other wire specialties. This company has long been in the market with the best styles of spool wire for handling by the Hardware trade, and these are all well illustrated and described in the contents of this catalogue, together with list prices covering the entire line, in quarter half and one pound spools per dozen spools. Included in the contents of the catalogue is shown a Retail Dealer's Stock of Spool Wire, which they distribute to the trade in wooden boxes with a hinged cover, giving an assortment of nearly 150 spools of the various kinds and sizes of wire that are likely to be called for. It is in a very handy form, that is familiar to nearly all the leading retail dealers in the country, and is worthy of any Hardware dealer's attention for general distribution.

THOMAS J. LEARY, importer and manufacturers' agent, 89 Chambers Street, New York. Illustrated catalogue of Guns and Gun Material in large variety. Catalogue is oblong in size, 36 pages, in which are given illustrations and full descriptions of the leading patterns of Guns and Rifles designed to be carried in stock during the season of 1901. Mr. Leary is sole agent of F. Dumoulin & Co., Liege, Belgium, a line of whose goods is illustrated in this catalogue. Very attractive wood cuts give a clear representation of the articles described. Embraced in its contents, which includes Interchangeable Double-Barrel Guns, and the Franklin Hammerless Gun, and several other salable varieties which form the product of the manufacturers above named, will be found a style of Ladies' Gun, using .44 calibre shot cartridge; also Single-Barrel Muzzle-Loading Guns designed to meet a demand for a firearm at a moderate price. A line of Flobert Rifles is also shown, together with Gun Material of every description for the guns above referred to.

## NEW GOODS AND SPECIALTIES.

### Southington Emery Wheel Dresser.

Southington Cutlery Co., Southington, Conn., have recently patented under date of May 7, 1901, a new and improved Emery Wheel Dresser, which is shown in the accompanying cut. This Dresser embodies a number of improvements that make it excel for the practical use for which it is intended. In each set of cutters are two broad tooth wheels, which not only protect the wear of the cutters, but open a clean and level cutting surface on wheel, and prevent unnecessary waste of the same.

SOUTHINGTON EMERY WHEEL DRESSER.

The cutters are so constructed that they have a direct bearing revolving on a hardened steel sleeve, which sleeve also revolves on a steel screw, which is shown in the illustration. It is claimed by the manufacturers that one set of these cutters will outwear three sets of the ordinary cutters that have been in use, while at the same time the emery wheel will have its usefulness extended twenty-five per cent. where these dressers are used. The cutters are intended to fit all regular holders. They are placed upon the market to be sold at a moderate price, the list price of Dresser with two set cutters is \$1.25, the Cutters being listed at 25 cents per set.

### Willoughby Sugar Beet Fork.

Willoughby Fork and Mfg. Co., Willoughby, Ohio, include in their large variety of forks and other steel goods the Sugar Beet Fork, of which we give an illustration herewith. It is designed to meet all the possible requirements of beet sugar

WILLOUGHBY SUGAR BEET FORK.

makers, being a practical article in every possible way. Each fork is made from one piece of the best crucible steel carefully tempered and polished, and made with or without drop-forged ball points. The usual and standard fork has seven tines, but the Willoughby fork is made in three sizes, 5, 6 and 7 tines, both blunt points or solid ball points, making six varieties of this article. The width of the seven tine fork is 14 inches; tines 14 inches long, the standard length of handle being 36 inches, and it is furnished as ordered fitted with either strapped or capped ferrule, and with wood or malleable "D" or long handle, as desired. None but the best selected XX handles are used in the construction of these

goods. Now that the sugar beet season is approaching, it is desirable that the trade should be fully posted in regard to the superior goods that are manufactured for this trade especially. The Willoughby Fork and Mfg. Co. issue a very handsome catalogue, which will be furnished the trade upon application.

### Haylor's Hold Fast Stove Pipe.

Stuber & Kuck, Peoria, Ill., are the manufacturers of Haylor's Hold Fast Stove Pipe, the construction of which is

illustrated in the accompanying cut. This stove pipe is furnished in joints 9 1-3 inches long, each joint being fitted with a fastening device, and furnished with a beautifully designed

HAYLOR'S HOLD FAST STOVE PIPE.

gilded collar, which measures 10 1-2 inches in diameter for a six-inch pipe, and 11 1-2 inches for a seven-inch. This

gilded collar is manufactured from heavy tin, and sufficiently strong so that it cannot be forced over the swedge. It is so constructed that it cannot be placed over four inches in the flue hole, and at the same time the manufacturers will absolutely guarantee that it will not come loose from the flue hole, except when desired at the will of the operator. The use of this new device entirely does away with all unsightly wires, screws or hooks, or the necessity of nailing on the collar, or ruining the plastered walls. It is calculated to become popular and to meet with a large and ready sale. It is made adjustable to fit any size wall, of any thickness from 4 to 9 inches.

**Ferguson Adjustable Electric Light Bracket.**

The Smith & Hemenway Co., 296 Broadway, New York, among the numerous specialties controlled by them, are introducing the Ferguson Adjustable Electric Light Bracket,

FERGUSON ADJUSTABLE ELECTRIC LIGHT BRACKET.

which is claimed to be one of the most novel and up-to-date roll-top desk brackets on the market. It is adjustable to any size roll-top desk or upright piano, and can be fastened in place without the assistance of screws or nails. If required, the reflector can be placed at any angle desired, preventing all glare in the eyes. It is an ornamental appliance handsomely finished in enamel and nickel. It is designed to be retailed at a moderate price, and while in its construction and operation it is extremely simple, and is quickly adjustable, it is at the same time a durable article. The illustration given herewith shows a few of the angles at which it may be placed. Illustrated matter and circulars of the lamp will be furnished to parties desiring the same.

**"Yankee" Ratchet Screw Driver No. 12.**

North Bros. Mfg. Co., Philadelphia, Pa., are placing on the market the "Yankee" Ratchet Screw Driver No. 12, of which we give an illustration. Notwithstanding the number of ratchet screw drivers already on the market, there has for some time been a demand for a strong, substantial

**"YANKEE" RATCHET SCREW DRIVER No. 12.**

screw driver with a short stub blade suitable for the special work that falls to the lot of gunsmiths, fitters, electricians and other skilled mechanics. This No. 12 screw driver is calculated to supply this tool, as it is not only rigid, but also right and left hand. The adjustment for right and left hand is made by pushing the shifter to opposite ends of the slot; when shifter is placed midway in slot the blade is held as rigid as in ordinary screw driver. The adjustment being across instead of in line with the blade, avoids any possibility of changing shifter when in use. It is made in one size only: Blade 5-16 inch diameter, 1 1-8 inches long, and the entire length of screw driver 5 3-4 inches. They are distributed to the trade packed one-half in strong paper box, the net prices on which will be quoted by the manufacturers on application. The material and workmanship of this useful tool in every detail is of the same superior quality found in the other "Yankee" tools manufactured by this well-known concern.

**Brown & Sharpe's New Tools.**

Among the new tools that are being placed on the market by the Brown & Sharpe Mfg. Co., Providence, R. I., we illustrate herewith the new Standard Wire Gauge, giving the

Washburn & Moen gauge numbers running from 0 to 36, this being the regular standard wire gauge. The illustrations show it full size. The trade number is 737, and the price \$2.50. It is made from the best steel, tempered, adjusted, and all sizes carefully tested after hardening. There has been a continued demand from wire manufacturers and sheet metal rollers for a wire gauge of this standard, and it has been introduced to meet this requirement of the trade. We also give

FIG. 1.

an illustration of their new Six-Inch Rule with Slide, trade number 364, and price \$1. This rule is especially convenient for measuring against shoulders, width of collars, etc., and is believed to be much appreciated by machinists. The slide can be removed and the rule used in the ordinary way, or the slide can be reversed to read either edge of the rule. They have also added in the circulars accompanying this rule a description of the improvements in standard steel rules, which they have listed in their catalogue for a number of years, and

FIG. 2.

believe that a careful perusal of this matter will show the advantages of their graduating rules. This is furnished together with considerable data relative to the reading of the graduations and also a number of measurements showing the application. The rules are six inches long, about 9-16 of an inch wide, 1-16 inch thick, and will no doubt prove a valuable addition to the equipment of the up-to-date machinist.

**Favorite Novelty Gas Stove.**

A very clever little article that must be classed under the head of a gas stove is being manufactured by the Favorite

FAVORITE NOVELTY GAS STOVE.

Novelty Co., 139 Beaubien Street, Detroit, Mich. It is intended to meet the demand for an article of this description

of general utility. The stove is three inches high, and two inches in diameter, the base and grate being made of cast iron, while the cylindrical body is constructed from corrugated tin. At the top of this body just below the grate is wire gauze. In order to obtain a hot fire with this stove, it is only necessary to slip it on an ordinary gas burner, turn on the gas and light the top of the stove. In this way it is always ready for heating water, milk, curling irons and for other domestic purposes, and can be transferred readily from one room to another. It is claimed that it will not black nor smoke. This new stove was invented by Henry P. Cope, the well-known manufacturer of stove patterns.

#### The "Secure" Scythe Brace.

Iowa Farming Tool Co., Fort Madison, Iowa, realizing that there has been for a long time a demand for a scythe brace that will strengthen and brace a scythe or snath so it will stand hard usage in mowing heavy weeds, bushes, etc., are

now engaged in manufacturing the "Secure" Scythe Brace, which is a simple, ingenious device, strong and substantial, that may be easily and quickly applied for the purpose. The manufacturers state that the device cannot work loose, as there are no parts to catch or clog. It does not require any wrench or screw driver to attach it, as this may be done by the use of a nail. The band will allow for ordinary variations in sizes of bush snaths. As there is but little doubt it will prove a popular specialty for the Hardware trade to handle, a patent has been applied for.

#### Spoiled By Cheap Hardware.

Suitable and appropriate trimming is something that is too often slighted both by owner and architect, and the tendency to cheapen the entire contract by reducing the cost of the Hardware is daily evidenced by the appearance of some of our buildings. As a rule the Hardware is a neglected matter until the building is nearly completed, and then as an offset to the expenditure in other details, the allowance for this detail is cut down.

The result is what one would look for in such a case. A handsome house or apartment with everything of an elegant appearance, the floors tiled, the walls beautifully frescoed and the woodwork handsomely polished, while the Hardware throughout is of the cheapest class, not fit for a tenement. There is an abundance of such Hardware on the market. Take in the first place the front door which is at all times before the eyes of the public. If trimmed artistically, it at once makes a good impression, and to be artistic does not necessarily mean at the same time expensive, for a good lock that is reliable can be had at a very reasonable figure, and a plain

grille will pay for itself in effect. Ornamental hinge straps will also add wonderfully to the appearance of a house, while on the other hand a cheap lock and trimmings will cheapen a door no matter how handsome it may be. A door cheaply trimmed makes the same impression as a soiled shirt front on a person, both are criterions by which you may judge of the rest of the make-up.

Locks for interior doors need not be either elaborate or intricate, but should be in keeping with the other appointments. If an ornamental design is too costly, then plain trimmings are by all means in good taste, and, like black clothes, always in keeping. When the cheap ornamental designs have the word cheap woven in the pattern, the owner makes a sad mistake when using such goods. The public notices and is influenced by such apparently little things. Plain bronze Hardware is but very little more expensive than the cheap trade ornamental goods and its application shows better taste.

Then again the utter disregard of the general architecture of the building in applying trimmings also of wood finished is a very common mistake. The effect of an elegantly carved door of a Romanesque style trimmed with colonial Hardware is not only an example of bad taste, but is a mistake that means a money loss, as a tenant may not be artistically educated, still a feeling of inconsistency will be experienced, for no person is so constructed that discord will not affect to a more or less degree.

No clause in the contract is so much neglected nor none of more importance than the one relating to Hardware. In the matter of butts there are many varieties from which selections may be made, but experience and judgment should be brought to bear in this matter. Bronze iron butts for the purpose of hanging the door do the work as well as the more expensive solid bronze, but they will not remain bronze but a short time. The appearance of the iron on a hardwood door where the lock trim is bronze certainly is not pleasing. Then again the mistake of cheapening the trimming by using a light butt is a serious one.

Nothing can be more provoking than a door that drags in closing or that will not close at all. While a settling of the building affects this matter more or less, it is more often the case of the butt being too light or too small, so that the weight of the door causes a sag that the butt will not withstand. A loose joint butt is a little less expensive than the loose pin, but it is not so durable nor convenient, as in a loose joint there is one bearing, and consequently more tendency to give and wear, thereby causing the same trouble as in the case of using a light butt. A loose pin has three bearings, and in case of necessity to remove the door it is much easier to do so.

A conspicuous fault in the present cheap trimmings of apartment houses and residences is the fact that the keys are interchangeable, or, in other words, the key that opens the hall door is more than likely to operate the lock on the pantry door or the linen closet and vice versa. This may be overcome by specifying in the contract that the locks have two or more tumblers and all keys different.

The tendency to use cheap Hardware seems to prevail more with the owner than the architect. In a great many cases the owner is not a man competent to select good trimmings for his house, and therefore should turn it over to the architect who will select something in keeping with the house for which he has drawn plans.—J. W. S., in *Architects' and Builders' Journal*.

There are 11 beet sugar factories in Michigan. They represent a total investment of \$4,000,000, and can be operated at a profit by paying \$4.50 a ton for beets. In spite of the recent decision of the Michigan Supreme Court invalidating the law granting a bounty of 1c. a pound, it is predicted that the industry will continue to flourish. It began in 1898.

but we are still at our posts and trying to keep our spirits up by eating three meals a day, with something refreshing on the side. The great strike now in progress we hope will not reach alarming proportions, nor be of long duration, as wealth and power arrayed against labor and poverty can mean nothing less than defeat for the weaker forces in a protracted struggle, and the possibilities also of disaster to business, life and property should certainly lead those in position to adjust differences to a speedy settlement. Collections are good.

H. W. WEBB & SONS.

#### THE PITTSBURGH TRADE.

The "strike" is the engrossing subject filling the minds of Pittsburghers at the present moment. It may terminate quickly or it may spread until it includes many more branches of the steel business, which would be a calamity not only to this section, but to the whole country.

The question at issue, viz: the unionizing of all non-union mills, seems to the outsider to favor the men, because the employers are consolidated, and the men should have the same privilege. The history of unions, however, shows such an abuse of power that employers having gotten rid of them during the last depression, fear to let them get another start. Incompetent men were kept in place, the output of mills and of workmen was restricted to tally with the work of the poorest hands, and innumerable annoyances practiced upon owners. In short, at their worst the union really ran the mills, and owners were lucky to get any profit for their investment. If some agreement could be arrived at wherein such abuses were eliminated, no doubt the owners would not object to all their mills being run as union mills.

Trade among Hardware Jobbers has been exceptionally good this month, and stocks of summer goods have been pretty generally cleaned out.

We note a slackening within the past few days, due to travelers being off the road for vacations and the between-season customary lull.

Conditions are favorable for good Fall trade unless a general labor trouble should affect this region, which is hardly probable.

LOGAN-GREGG HARDWARE Co.

#### THE ST. PAUL TRADE.

Our territory has not yet suffered from the excessive heat reigning all over it, but we do not know how long the crops will stand it. It is hot—so hot that men, women and children suffer, still we are so much more comfortable than our friends in Nebraska, Kansas and Missouri that really we ought not to complain. While the thermometer shows a temperature almost equally high, the humidity is not more than 60 to 70 per cent. as great, so if any one desires to get into a good summer climate we invite them to come to our State.

Business is good, with prospects very fine. Prices are firm with many articles very hard to get. The barbed wire situation is not changed. We do not try to supply our trade, or offer any for sale, as we cannot succeed in having any shipped

to ourselves. It seems too bad to disappoint so many of our good friends, but as we are in the hands of the big trust, we must bend our necks to whatever they wish to do to us. Sometime we hope for a better condition.

C. W. HACKETT HARDWARE Co.

#### THE MINNEAPOLIS TRADE.

We are all anxiously waiting on the crops. The next few days will tell the story. There are rumors of damage from hot winds, lack of moisture, and so forth, but after all we cannot believe that the damage from any source is serious, or more than local. Undoubtedly there will be spots here and there where there will be shortage, and possibly a total shrinkage of perhaps of 10 per cent. from the estimated crop, and the estimate was large, for certainly on the 1st of July conditions could not possibly have been more favorable. It has been excessively hot for a number of days but there have been showers recently, covering nearly the whole of Minnesota, North and South Dakota and Northern Iowa.

Just at this particular time, business is suffering somewhat from the heat, but trade has been exceedingly good, although competition at this point is sharper than ever before. In anticipation of good crops we expect excellent fall business.

W. K. MORISON & Co.

#### THE DAVENPORT TRADE.

With the most gigantic strike ever known in iron and steel factories on one side, and a drouth-ruined crop on the other, a parched earth beneath, and a burning sun above, breathing an atmosphere of one hundred in the shade and some days still higher, how can an optimistic Hardware-report-writer be expected to say anything hopeful of the present and future prospects for the Hardware trade. The favorable conditions, as we see them, are these: The people are not much in debt. The stocks are light in the hands of both wholesale and retail dealers. For the present there will be a surplus of money in the hands of farmers and stock raisers on account of rushing their stock in to market for want of food.

Sales are better than they were a year ago. Prices are firm with advancing tendency. The demand for many lines of staple goods is still greater than the supply. We can see no good reason why trade should not continue satisfactory for the next two months, or until it is handicapped by a political campaign and County Fairs. Collections tardy.

SICKELS, PRESTON & NUTTING Co.

#### THE SAN FRANCISCO TRADE.

Business activity is still tripping along at the full-tilt gait that has been the unvarying twice-a-month exhibit in this correspondence since the twentieth century began. Although vacation season is at hand, Hardwaremen are finding it not so convenient to get away from business this July as they have found it in preceding years. The weather has been perfect all the year for outdoor work, and activity in builders' Hardware trade is scoring unprecedented success, is the voice of such prominent dealers in this line as the Palace Hardware Co., Charles Brown & Sons, Bennett Bros., and Philpot & Armstrong, and so far as the future is discernible, say Hardwaremen generally, a continued business prosperity is the promise indicated. Never before has San Francisco been as full of visitors as now, hundreds of men from Eastern States being seen on the streets carrying guns. These are representatives of the National Bundesfest Festival Association now holding their annual meet in this city. Many in the Hardware trade and exclusive firearms dealers are daily visitors during the week's shoot to witness these marksmen of national reputation, in professional action.

### Hardware, from a Shakespearian Standpoint.

The "myriad-minded" bard has a good deal to say about the Hardwares common in the Elizabethan era, and he shows as great powers of discernment and observation in the matter of the products of Tubal Cain's descendants as when describing the greatest and smallest productions of nature. Let us take a few examples:

**BELLS.**—"As sound as a bell" is now a proverbial expression. "The falcon's bells," "bells in your parlors," "a common 'larum bell," "sweet bells jangled out of tune," "the merry bells," "the solemn bell," are all expressive of the various forms and sounds of fixed bells which Shakespeare saw and heard. His single reference to handbells is in "Othello"—"The snorting citizens with the bell."

**CANDLESTICKS** are also called by Shakespeare "cansticks," "candleholders." He speaks of "a brazen canstick," "a brazen candlestick turned," and the term "candleholder" appears in "Romeo and Juliet." In this connection, the bard also refers to "candlecases," in his time a common object in every household, but now an almost obsolete Hardware industry. Most of the candlecases—boxes to hold candles—were in Shakespeare's time made of wood, but in the better-class houses, they were made of metal, and were often ornamental in shape and design.

**CHESTS.**—Shakespeare lived before the age of iron safes, but there were strong and secure treasure chests in his day. He refers to "press, coffer, and chest," to "chests of gold and silver," and to a "ten times barred-up chest."

**HAMMERS** are several times mentioned: "With busy hammers closing rivets," "aprons, rules and hammers," "hard as hammered iron," and "the motion of a pewterer's hammer." There was, doubtless, a pewterer or tinman in Stratford when Shakespeare was a boy, and the peculiar motion of the pewterer when using his hammer, probably attracted the notice of the budding bard.

**HINGES.**—Were the hinges of the sixteenth century often of inferior quality? He lays great stress upon "strengthless hinges," in Part II, "Henry IV."

**LOCKS AND KEYS.**—Shakespeare has numerous references to locks and keys. He mentions padlocks in "Much Ado About Nothing," "and a lock hanging to it." "Where is the key to unbar these locks?" There must have been a Hobbs in Shakespeare's day. In "Cymbeline" occurs the line, "I have picked the lock," "bunches of keys at their girdles," "out at the keyhole." But what meaneth this curious phrase in "Richard III.," "a poor, key-cold figure?" Does it mean some poor wretch who had (as we call it now) "the key of the street?"

**PINS.**—"Pins and poking sticks of steel," "no bigger than

pins' heads," "unto a row of pins," and other references tend to show that the pins used in Shakespeare's time were much the same as those in use to-day.

**SCALES.**—"A feather will turn the scale," "poising us in her defective scale." There were evidently good and bad scale-makers in the poet's day, and as there were no inspectors of weights and measures then, the bad scale-makers and the users thereof must have had merry times of it.

**STEEL.**—"As hard as steel," and "more sharp than filed steel," are among the testimonies that Shakespeare bears to the quality of that metal in his day. Shakespeare also alludes to a "gate of steel fronting," "pikes of steel," "hooks and strings (coils) of steel," "bars of steel," and, as might be expected, very many references to steel armor and weapons of war.

**STIRRUPS** and spurs are freely mentioned, but there is nothing to indicate any peculiarity of style or construction, whether of Walsall or other make, beyond an occasional reference to spurs being extremely sharp pointed.

**SPOONS.**—The bard mentions "leadens spoons," in "Coriolanus," and in the "Comedy of Errors." He also alludes to "a long spoon that must eat with the devil," the quotation of which some months ago by a leading statesman caused that gentleman a somewhat uncomfortable half-hour.

**KNIVES** come in for very frequent allusion, both in the comedies and tragedies of Shakespeare. "A short knife and a throng," "a butcher's knife," "a little knife," are among the sayings, but perhaps the most curious is one which appears in "The Merchant of Venice":

Like cutler's poetry upon a knife.

This evidently means that the cutlers of Sheffield and elsewhere made knives for lover's keepsakes, and inscribed upon the haft or blade some tender sentiment, or, perchance, in brief, a sonnet appropriate to a swain—

A sonnet on his mistress's eyebrow.

It is notable that the word pork, as applied to an article for use at the table, does not appear in the pages of Shakespeare.

"You know Will was just crazy to marry me!" said the young bride.

"Yes; that's what everybody thinks," replied her jealous rival.—*Ex.*

Spendall—I gave you that \$5 as a friendly tip. Why do you hand \$4 back?

Waiter—I likes to keep everything on a business basis, sah. Gents wot's so very friendly w'en dey has money is apt to come 'round tryin' to borry w'en dey gets broke.—*Ex.*

# STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

### The Manufacture of Bronze Powder in Germany.

One of the most important and interesting of the special forms of manufacture, for the product of which the United States is dependent upon Germany, is that of bronze powder, the shining metallic dust which is used for producing gilt and bronze effects in wall papers, letterpress printing, lithography, mirror and picture frames, fresco painting, and the artistic decoration of a vast range of manufactured articles in wood, paper and various metals. For all these purposes, bronze powder offers the cheapest and most effective means of giving a surface effect of gilt or bronze, and its use has expanded with the rapidly increased production of articles of luxury and taste.

The principal seat of the bronze-powder manufacture is the city and vicinity of Fuerth, in Bavaria, where the requisite water power and other conditions are favorable, and the industry is in the hands of an exceptionally intelligent and enterprising class of men, who have invented new machinery and improved methods until the whole process of manufacture is now mature, ably managed, and successful. The material used is so-called Dutch metal, an alloy of copper and spelter, in which the relative proportions of these are varied to produce the different colors desired. The larger the percentage of spelter, the lighter or more yellowish will be the tint of the alloy. The manufacturing process divides itself into two stages or branches, which are usually carried on in different establishments, viz., the preparation of leaf metal and the reduction of clippings of that material to the form of powder by milling.

The copper and spelter are smelted together in graphite crucibles, which are inserted in a large furnace heated by a strong coke fire. The crucibles contain about 400 pounds of metal, and when their contents are completely fused, they are run off into molds, which form half-round ingots 2 feet long by half an inch in thickness. After cooling, these ingots or rods are bound into bundles and sent to the rolling mill, where they are passed cold nine times through a double set of steel rolls under powerful pressure, by which they are flattened and drawn out into thin ribbons from 50 to 60 feet in length and something more than 1 inch in width. Cold rolling under such extreme pressure has the effect of rendering the metal brittle, and it therefore passes at this stage to the annealing furnace, which is heated by wood fire, as the sulphur in coal or coke would be injurious to the ribbons; which, having been softened and rendered ductile by annealing, are cleansed in an acid bath, cut into lengths of about 3 feet, and collected in bundles of 40 or 50 strips each. They are now laid between sheets of zinc, which are fastened together and passed under slinging hammers worked by water or steam power, by which the metal strips are beaten to a thickness of tissue paper. This process includes six successive beatings, and requires great skill on the part of the operatives to produce a uniform and unbroken foil. After the third beating, the metal strips are taken from between the sheets of zinc, loosened from each other, and cleansed by immersion in a bath of tartrate of potassium. This cleaning is repeated after the sixth and last beating, and the sheets, thus cleansed from oxide and other impurities, are hung upon lines to dry. At the beginning, the rolled strips are of a dull-

gray metallic color; at the fourth beating, the yellowish color begins to show; and after the sixth, they are clear and bright as gold.

In view of the great variety of purposes for which bronze powder is employed, it is graded in respect to color into seven qualities or tints, ranging from bright copper red to golden yellow. These successive tints are governed by the relative proportions of copper and spelter used in making the alloy, which are as follows:

Color.	Parts copper.	Parts spelter.
No. 1.....	350	36
No. 1½.....	330	52
No. 2.....	330	62
No. 3.....	310	70
No. 4.....	310	90
No. 7.....	300	112

In the foregoing description, the material had reached the condition of thin sheets of leaf metal, 3 feet in length, widened by hammering between zinc plates from 1 inch to an average width of 8 inches. These, having been cleaned and dried, are carefully assorted, the defective leaves thrown out as waste or inferior material, and the perfect ones cut into small squares, which are laid together by hand in packets of several hundred each and inclosed within an envelope of sheet brass. Thus held together and protected, the packets are returned to the annealing furnace, where they are softened by heating and slow cooling, and then go to the beaters, where they are reduced, under flattening hammers, to the thinness of real gold leaf—so thin that it can be blown away by the breath. This completes the preparation of leaf metal, the finished material for bronze powder and other purposes, of which there are not less than a hundred manufacturers in the city and district of Fuerth. This part of the industry dates from the sixteenth century, and has been built up by many generations of patient and skillful beaters of gold, silver, copper and other malleable metals.

The manufacture of bronze powder consists in grading, clipping and pulverizing the various bronze foils to an even, impalpable powder, and is an industry of comparatively recent date. The present perfection of methods and product has only been attained during the past thirty years. It

## "JACKSON" POCKET KNIVES.

Four reasons for buying them.

1. Blades and back springs  
Wardlow steel.
2. Workmen of life long ex-  
perience.
3. Superintendent "cranky"  
on fine finish and edges
4. Low prices.

THE JACKSON KNIFE AND SHEAR CO. FREMONT, OHIO,  
U. S. A.

began as a means of using up and utilizing the imperfect leaves which came as waste from the beaters of gold, silver and bronze. These were cut by hand into fine clippings and then ground to powder in handmills of simple construction. With the lapse of time and the spread of artistic industries, the uses of bronze powder increased until the demand far outran the supply of waste, and the leaf metal is now made on a large scale, specially as a material for this purpose. The beating process flattens out a pound of copper and spelter alloy to an area of about 500 square feet, and in this condition the square sheets, as they come from the brass envelopes, are sheared into small fragments and rubbed with olive oil through a steel sieve having ten meshes to the inch, and then passed to the stamping and grinding machines, where they are pulverized by steam or water power to the bronze powder of commerce. The grinding occupies from one to four hours, according to the grade or quality of the powder to be produced, which is of four grades—from coarse to superfine. The superfluous oil is removed by heating under pressure, and the powder is then carried into centrifugal clarifiers, or grading machines, which, turning at a high speed, expel the powder through fine orifices in the form of dust, which settles on inclosed shelves, according to weight and fineness—the finer particles at the top, the coarser below—and in this way the powder is divided into the several grades of fineness and consequent value. Bronze powder and leaf metal are exported largely from Germany to the United States, the exports from Fuerth alone during the fiscal year ended June 30, 1899, having reached a declared value of \$595,680.34, and of \$920,317 for the fiscal year 1900.

FRANK H. MASON, Consul-General.

BERLIN, June 13, 1901.

### Effect of Machinery Upon Labor.

The first and immediate effect of the introduction of machinery is to displace labor. It compels a certain number of people to either remain idle or to seek employment elsewhere in other departments from those in which they have been trained. It is this effect, felt personally by the workmen connected with the industries in which the machines have been introduced, that has in times past led to the opposition to machinery, especially in the early part of the last century.

The first effect, however, is not lasting and the second and ultimate effect of machinery is the expansion of labor. It seems to be wrong in principle for a body of intelligent men to be employed in slow and arduous labor when, by the introduction of machinery, a smaller number of perhaps less intelligent men can do the work quicker and easier. An auto-

matic machine may throw out of employment a certain number of individuals at one particular place, but in the long run we doubt if any automatic machine ever resulted in the employment of fewer people, taking the country at large. On the contrary, machinery makes necessities out of luxuries and tends to increase the per capita consumption of every desirable article, often many times; this in addition to the work required to build the machines themselves.

This view is amply sustained by the best available statistics. There has been a regular increase in the number employed in manufacturing and in the industries dependent upon machinery, in proportion to the total population. During the thirty years from 1860 to 1890, the population doubled, or increased 100 per cent., while the number employed in the industries increased 172 per cent. It would be unfair not to attribute part of the increase to the influence of machinery.

Take the case of manufacturing toothpicks. We have seen it stated that 95 per cent. of the toothpicks made in this country are from lumber cut in the State of Maine, yet only about 100 persons are employed in the industry in that State, due to labor-saving machinery. To manufacture the millions of toothpicks that Americans imagine they require would give employment to thousands if they were made by hand. But has toothpick machinery actually displaced hand-labor? If the purchasers of toothpicks had to pay the price of hand-made toothpicks, the demand would drop so suddenly that there would be an exodus of these employees from the State of Maine such as has never been seen. As long as toothpicks are cheap they will be bought and the 100 employees thereby benefited. Let better machinery be introduced and it would in all probability result in lower prices, increased sales and the employment of the same or a greater number. Should it happen, however, that some of these 100 men were finally displaced, the growth of industries in other directions, as the direct result of machinery, and made possible only by machinery, would give them employment. In view of the statistics quoted above, moreover, it is not unreasonable to suppose that some of these men might have sufficient resources to develop other lines of work calling for the employment of others; and in fact this is what does happen, speaking in a general way.

It is not easy to outline all the effects that have been wrought by the introduction of machinery. It is futile to argue that people are either more or less happy than they were before its introduction. People lived contented lives 100 years ago in spite of many hardships, but their desires were fewer and their expectations less than now. Whether people are happier now, we do not know; but it is certain that they could not contend with the present day complexities without the aid of machinery. Machinery is a necessity, and we should not only make the best of it, as some would say, but should try to make the most of it.—*Machinery.*

### The Clerk Who Succeeds.

MUST HAVE TACT AND THE ABILITY TO MAKE FRIENDS.

The young man who is making his way through the world, depending upon his energy, industry and intelligence to lift him higher, must not neglect to cultivate the study of mankind. No matter how efficient he may be in other qualities, if he is not a judge of men he is doomed to failure.

A man must possess the faculty of winning the confidence of other men and of making them his friends if he would be successful in any way. This faculty, or gift, is born with some. They touch a sympathetic chord in every one they meet, are given a hearing when more worthy men are turned away, and succeed along their chosen lines when men of immensely greater ability plod along at the foot.

If we say they possess tact, we only half express it. Tact is saying and doing the right thing at the right time to the right person. Tact prevents blunders that would make enemies, but does not necessarily make friends. Tact is the form, but the feeling lies deeper down. To make friends, tact must be present, but the heart only can tie the knot of friendship.

The strength of youth is its unlimited hopefulness. Success is just around the corner; in a few years, at most, she will be overtaken; then come ease and luxury! The great majority of those in the race never catch a glimpse of her robes, and the ones who lag farthest in the rear are those whose manners were so unsympathetic or forbidding that the men who could and would have helped them refrained, perhaps at the critical moment, from saying the word or doing the thing that would have advanced them.

I am at this moment interested in a man who is out of work and who is struggling bravely to find a position. When he is not near me I study how I can help him, and canvass friends who may need a man and who would give my recommendation some weight. But when he comes to see me he has not talked five minutes before I begin to think that I wouldn't want him near me all the time; and, feeling so, I wonder if it is right that I should commend him to others. He has not tact. He does not permit me to get half way through a sentence before he interrupts me to agree with me, while he proceeds to finish my sentence in an entirely different way from what I had intended. I concluded that it is not worth while to go back and finish in the way I started out to do, so let it go as he left it, but I do not volunteer any further remarks. When he goes away I still wish as much as ever that he was at work, but I am hoping that he will find a place without my having to make a special recommendation.

Every young man, with the competition of life around him, should probe deep down into his own soul and learn for himself just what is the measure of his capacity to win the good will of other men. He should be absolutely honest with himself, listening to no flattering tale, but facing the truth fearlessly.

I recall another young man who was visiting in a city for a few days and was taken by his host to call upon the head of a wholesale house that he might see how business was done in that busy place. The young man and the merchant talked together for an hour, and the latter drew from the youth the story of his life thus far and his aspirations for the future. That evening the merchant called upon the host, and as he took his leave particularly requested the young man to call upon him in the morning. He then said:

"Some remarks you made yesterday kept repeating themselves to me after you went away. I think you are possessed of the spirit that succeeds. I want a man in my office; if you wish to take hold you may."

The offer was promptly accepted and neither man ever had cause to regret it.

As any man studies his relations with other men, and analyzes the position in which he holds those whom he meets in either a social or business way, he must confess that he

divides these into two classes: those who attract and those who repel him. There is a small percentage to whom he is indifferent, but the great majority are in the two classes I have named.

A man who intends to succeed must have friends. These are not to be bought or borrowed ready made; they must be evolved out of the men and women whom he meets, both in social life and in business. How shall he do this? I know of no better rule than that given in Proverbs: "A man that hath friends must show himself friendly." If this was given as the rule by which a man shall keep his friends, much more is it the law to be adopted by which one shall create friends for himself.

The result of the efforts to make friends is no less important to the clerk in the smallest Hardware store than to the salesman in the largest wholesale concern. Both rise or fall by their power to please their employers and customers.

When I miss my favorite clerk at the Hardware store I am quite prepared to hear that he has started in business for himself. All who dealt with him liked him; many have promised that if he started for himself they would give him their trade, and have followed him. His capital in friendship is far more valuable to him than his dollars.

The salesman who has been calling upon me for years, and who has won my regard, now tells me he is traveling for himself, having started in business with a partner, and he is certain of my trade to as great an extent as I can give to him.

There is a class of people who make friends easily, but who do not hold them. If they are traveling salesmen their first trip is usually a good one, but each succeeding trip grows poorer until they are dropped. It does not seem to be because they are insincere, but because they do not wear well. All that there is in them is on the surface.

There are others who are much too friendly in appearance upon short acquaintance. They ask about trade with such gravity of tone as if they had come these hundreds of miles to get the answer to that one question. You feel that they are acting a part, and you are not complimented that they should think that you are deceived by it.

By far the larger portion of mankind can think only of themselves; the I, with them, is so extremely large that they spend most of their thought and time in efforts to impress the world with a proper sense of their fancied importance. A person belonging to this class can never forget himself long enough to take an interest in his auditor. He not only lacks tact, but he is wanting in common shrewdness.

The interest that makes friends must be both kindly and honest. The clerk and salesman must forget himself; must think only of the one purpose, to make the person his friend. This is not accomplished by fawning upon men, nor by echoing their opinions, but by an intelligent acquaintance with human nature that pushes one's self into the background and sees and brings out the best in others. He must follow out the injunction laid down for keeping friends and "show himself friendly."—WILLIAM H. MAHER in *Saturday Evening Post*.

### The Old Man's Idea.

Papa—Its after eleven; what on earth do Bessie and that young man find to talk about?

Mamma—Oh, questions of the hour, I suppose.

Papa—I'll bet they haven't the remotest idea what the hour is!—*Detroit Journal*.

### All of a Mind.

"Didn't the gentleman give you anything for rescuing the lady from drowning? Why didn't you ask him?"

"I didn't have the gall to after he told me she was his mother-in-law."—*Ex.*

Says Simon Frost: "I'd rather own an acre lot, that won't grow nothin' but weeds and taxes an' a mortgage, than the han'somest graveyard in the world ef I had to live in it."

### How Modern Invention Lengthens Life.

In many parts of the world Americans are frequently criticized because their daily lives are too active, too crowded, too much occupied with matters of business. In a certain sense these criticisms are just. Unquestionably any man, whether living in the United States or elsewhere, who devotes all his waking thoughts to the affairs of trade or politics, loses in time that breadth of culture and depth of refinement that would be his if he gave a portion of his time to literature, music, art, the drama and society. Nothing is more stimulating and uplifting than to turn aside after several hours spent in grappling with problems relating to the more sordid side of life and devote the balance of the day to cultivating the higher self or in occupations that, if not ennobling, are at least wholly unconnected with business.

But while we thus grant at the outset that our critics have a strong presumptive case in their favor, we are inclined to think that in reality they assume a great deal that is not so in asserting that the average American is wholly absorbed in business cares. It is true that during the day the business man in any of our large cities is intensely occupied, and also that he accomplishes far more work than many men in similar positions abroad would dream of attempting. But this is largely owing to the many facilities for rapid work that he finds at his disposal. At his elbow he finds a telephone receiver. A brief request to the telephone clerk in the main office and he is able to talk at once directly with those with whom he desires to do business at any moment. This one device may easily save hours of his time. A stenographer is at his service when desired, and fifty letters can be dictated in the time necessary to write three. A messenger call is on the wall nearby, and telegrams can be despatched or articles sent away or procured without leaving the desk or losing more than a few moments of his own time. Should a trip to a distant city prove necessary the tickets can be secured, seats or

berths engaged and carriage called with equal ease. These are but a few of the many ways in which modern invention comes to his assistance while still in his office, saving his time and increasing proportionately the amount he can accomplish during a working day. Instead, therefore, of being a matter for wonder it is a commonplace for such a business man to carry on dealings direct with half a hundred different individuals or firms, and conclude transactions that would have been physically impossible for ten men deprived of the advantages he enjoys.

The significance of all this lies in the fact that a business man who works in this manner may seem to those who note only the multiplicity of his achievements an inordinately busy man, while in reality he has more leisure than many an old-fashioned business man, who accomplishes a tenth or possibly a hundredth as much. His spare hours may be improved to the utmost in the same manner if he is an energetic man, and the world may thus have occasion to know him not only as a great merchant or manufacturer, but as a great philanthropist or politician or patron of art or music. Such a man literally lives longer by reason of the inventions it is his privilege to employ, since his opportunities for usefulness both to himself and to others are thereby multiplied, it may be, many-fold. The number and variety of his individual experiences and of his enterprises, both private and public, may be equal to those of ten men living without the aid of such conveniences. His life, therefore, measured by the truest standard, that of achievement, is ten times as long. It is quite within bounds to say that a year of a modern business man's life is equal potentially to ten years of that of a man of similar social standing and wealth living five centuries ago. The life of the modern man of affairs has thus been lengthened with respect to its activities until, instead of the three-score years and ten of our ancestors, it can be measured almost by centuries. There is much of literal truth in the saying that a year of our time is worth a cycle of Cathay. To those who employ all of the facilities modern invention has placed at their disposal it is certainly worth vastly more than ever before in human history.—*Export Implement Age.*

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Bennettsville, S. C.—The Excelsior Hardware Co., recently chartered, will open business here next month, with capital stock of \$10,000. The members and officers of the firm are: B. E. Moore, president; C. F. Moore, vice-president; R. J. Patterson, Jr., secretary, and P. B. Moore, treasurer.

Boone, Ia.—The Johnson Hardware Co. is a new organization, with a capital of \$10,000, and the following incorporators: J. D. Greve, R. J. Johnson, T. W. Guy and James Troughear, Jr.

Camden, N. J.—The Snyder & Allen Co. have filed articles of incorporation in the Clerk's office to deal in cutlery and electrical supplies, with a capital of \$25,000.

Chester, S. C.—The Secretary of State has issued a commission to the Bewley Hardware Co., which proposes to do a wholesale and retail business on a capital stock of \$10,000. The corporators are W. D. Bewley and L. B. Dawson.

Fulton, Mo.—Berghauser Hardware Co. has been incorporated. Capital, \$8,000. Incorporators, Helen Berghauser, Louis Berghauser, Robert A. Crews and others.

Kansas City, Mo.—Robinson Implement Co. has been incorporated. Capital stock, \$30,000. W. N. Robinson, O. L. James, A. L. Newton and J. A. Robinson, Jr.

Lewiston, Me.—James Howard, of Pierce Street, Lewiston, is about to open a Hardware store in Presque Isle.

Little Rock, Ark.—Articles of incorporation of the Fox Hardware Co., of Pine Pluff, have been filed with the Secretary of State. Capital stock, \$100,000. The incorporators are Fred Fox, president; Hugh C. and Fred R. Fox.

Mabank, Tex.—The Osborne Eubank Hardware and Lumber Co. has been incorporated. Capital, \$20,000.

Marlin, Tex.—The firm of Rush Bros. & Gardner has been incorporated under the name of the Rush-Gardner-Bartlett Co. They are doing a Hardware and furniture business here and will also open a branch house at Mart. The capital stock is \$75,000.

Richmond, Ind.—The Peter Johnson Co. has been incorporated, with a capital stock of \$6,000, to deal in stoves and Hardware.

Richmond, Va.—Judge Minor, in the Court of Law and Equity, has granted a charter to the Virginia-North Carolina Hardware Co., which is capitalized at \$25,000. The officers and directors of the company for the first year are: J. B. Prinder, president; Walter S. Prinder, first vice-president; Lucius F. Cary, second vice-president; Henry G. Ellett, secretary and treasurer, and John S. Ellett, Jr., assistant secretary and treasurer; John S. Ellett and W. M. Cary, directors. They will carry on a general Hardware business, including the

manufacture of supplies, with the principal place of business in this city.

South Omaha, Neb.—The W. H. Sloane Co. have filed articles of incorporation with the Secretary of State. The capital stock is placed at \$10,000. Ella M. Sloane, W. H. Sloane and C. M. Sloane are named as the incorporators. They will conduct a furniture and Hardware business.

St. Louis, Mo.—The Norvell-Shapleigh Hardware Co. have filed papers and articles of incorporation, showing a capitalization of \$1,000,000. The stockholders are Saunders Norvell, William S. Yantis, Taylor D. Kellogg, H. B. Gordon, A. F. Shapleigh and August Shapleigh Boyd.

Zolfo, Fla.—J. R. W. Smith has opened a Hardware and furniture store.

### Changes and Improvements.

Amboy, Ill.—Geo. R. Keeling has bought the stock of Hardware formerly owned by M. Wigum & Co., of West Brooklyn. The stock is now being invoiced and as soon as arrangements are made Al Tuttle will take charge of the store at that place.

Brookhaven, Miss.—E. M. Price, of the Hardware firm of E. M. Price & Co., has sold his interest in the business to his partner, Mr. E. Simon.

Chula, Mo.—Geo. Clarkson has purchased the Laredo Hardware stock of Prof. Hortenstein and will remove with his family at once to that city.

Clearfield, Pa.—The well-known Hardware firm of Powell Bros. & Bigler, doing business in the large store and warerooms on South Second Street, have dissolved partnership by mutual consent, Geo. W. Powell retiring. This firm will be succeeded by W. F. Powell and A. W. Bigler, and will trade as Powell & Bigler.

Cleveland, O.—The Hardware firm of Davis, Hunt & Collister has been changed from a partnership to a corporation. The letters were granted by Secretary of State Laylin upon the application of E. P. Hunt, E. L. Davis, J. H. Collister, William P. Fisher and Richard Collister. The capital stock is placed at \$65,000. The business will be conducted at the same place and along the same lines as that done by the partnership, the object of incorporating being a facility of transacting business.

Fort Smith, Ark.—The Atkinson Hardware Co. has filed with the Secretary of State a certificate of change of name to Atkinson-Williams Hardware Co.

Jamestown, O.—Al Wickersham has sold his Hardware room to R. B. Strong.

Jessup, Pa.—J. F. Mack has broken ground for the erection of a Hardware store on Depot Street.

Keene, N. H.—The Spencer Hardware Co. has about completed arrangements for a lease of the corner store in the E. F. Lane block, which is being built on the corner of Church and Main Streets. The store is 32 x 126 feet, about three times as much floor room as the store the company now occupy.

Lebanon, Pa.—The large addition to the first floor business room of Gamber & Failer, Hardware merchants, north Ninth Street near Willow, in the Seltzer Building, has been occupied by the firm. The new extension is roomy and well lighted, and beside extra floor facilities offer much in the way of shelving and other display place. The firm's office is also located in the new part in the rear. Aside from the new addition connecting with the former business room, is a large new two-story brick building in the rear for warehouse and repair purposes.

Little Rock, Ark.—The W. W. Dickinson Hardware Co. has filed with the Secretary of State a certificate of increase of capital stock to \$150,000.

Los Angeles, Cal.—The California Hardware Co. has filed a certificate of an increase in its capital stock from \$100,000 to \$250,000. This action was taken at a meeting of the stockholders.

Louisville, Ky.—The building on Market Street between Third and Fourth, recently vacated by J. Dolfinger & Co., has been leased by Ben F. Vogt, who will remodel the building and move his Hardware store into it. Work will be begun on the remodeling at once.

McKeesport, Pa.—With the first day of July came the announcement of a change in two well-known Hardware firms. The firms of the Hartman Hardware and Supply Co. and the Hartman-Sword Co. have consolidated, and will continue in business under the firm name of the Hartman Hardware Co., George W. Hartman, Charles N. Hartman, J. A. C. Sword and W. E. Hartman, proprietors. Both stores will be continued at the present locations. The new company later expects to greatly enlarge both stores and branch out into wholesale business.

Nashville, Tenn.—An amendment to the charter of the Gray-Dudley Hardware Co. has been made, increasing its capital stock to \$500,000.

Peoria, Ill.—There has been filed with the county recorder a certificate of increase in the capital stock of Clark, Quien & Morse, the Hardware firm, to \$100,000. The former capital stock of the firm was \$75,000, and the increase in working capital is made necessary by the expanding business of the company.

Portland, Ore.—The well-known sign of Honeyman, De Hart & Co., which has been familiar to residents of Portland for many years, has disappeared, and in its place appears the sign of the "Honeyman Hardware Co." a joint stock company, incorporated here a few days ago by Mrs. T. D. Honeyman and her sons.

Statesville, N. C.—An amendment has been allowed by the Secretary of State to the charter of the Flanigan-Evans Hardware Co., of Statesville. The amendment changes the name of the company to The J. P. Flanigan's Sons Co.

Willoughby, Ohio.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Allegheny, Pa.—The Superior Mfg. Co., which will make asbestos fire logs and gas burners, has applied for a charter with a capital stock of \$25,000. The new plant will be located at Said and Magnolia Streets. Those interested in the new company are: W. T. Bradberry, formerly of the Anschutz-Bradberry Co., and later vice-president of the Pittsburgh Stove and Range Co.; Wm. H. Collingwood and Thomas M. Dudgeon, formerly with Bissell & Co., and Robert A. Bradford. The new plant will employ fifty men.

Bangor, Me.—The Penobscot Machinery Co. has been organized for the purpose of manufacturing and dealing in machinery of all kinds, tools, belting, mill and railway supplies with \$10,000 capital stock. The officers are: President, M. E. Farrington, of Brewer; treasurer, L. E. Levenseller, of Hampden.

Barnesville, O.—T. & A. Rogers have started a shovel factory in their building on South Chestnut Street.

Brooklyn, N. Y.—The S. Roebuck Co. has been incorporated with the Secretary of State to manufacture and sell window, door and porch screens. The capital stock is \$50,000 and the directors for the first year are Samuel Roebuck, Thomas W. Cusack and Samuel Henry Roebuck, of Brooklyn.

Brooklyn, N. Y.—Timmis Mfg. Co. has been incorporated to manufacture tools. Capital, \$5,000, and directors, W. S. Timmis, J. T. Russell and C. J. Dodd, of Brooklyn.

Buffalo, N. Y.—Union Mfg. and Specialty Co. has been incorporated to manufacture machine tools. Capital, \$15,000. Directors, W. H. Crosby and W. H. Hill, Buffalo; A. D. Dana, Springfield, Mass.

Chicago, Ill.—Quick Acting Wrench Co. has been incorporated. Capital stock, \$3,000. Incorporators, Charles D. Albert, J. E. Talfer and H. C. Shaw.

Cleveland, O.—The Gilt Edge Washing Machine Co. has been incorporated with a capital of \$25,000. Incorporators, T. C. Hartzough, A. M. Barnes, F. B. Wiggins, C. J. Brown and C. T. Hartzough, of Cleveland.

Columbus, O.—The Pioneer Stove Co. has been incorporated, with \$100,000 capital stock and the following incorporators: G. W. Latimer, R. R. Rickly, A. W. Williams, G. B. Kauffman and Henry C. Taylor. The company will manufacture stoves and ranges and other utensils.

Council Bluffs, Ia.—Bloomer Mfg. Co., has been incorporated. Capital stock, \$100,000. Iron, wire and nails. Incorporators, R. H., R. W. and A. L. Bloomer.

Fordyce, Ark.—The G. P. Latch Co. have filed articles of incorporation with the Sec-

retary of State. The incorporators are G. M. Hampton, president; J. E. Hampton, Jr., vice-president; W. B. Shumaker, secretary and manager; John R. Hampton, treasurer. The capital stock is \$50,000. They will manufacture and sell gate latches.

Gadsden, Ala.—The A. & J. Mfg. Co., which is the name of the new stove concern, has secured a lot for their foundry on the Louisville & Nashville Railroad. They expect to begin building next week. The lot is 105 x 550 feet. The main building will be 60 x 100 feet, with engine and boiler room 20 x 40 feet. Later a warehouse 50 x 100 feet will be erected. It is intended by the promoters to have the works turning out some goods in ninety days.

Lansing, Mich.—The Kalamazoo Stove Co., organized with a capital stock of \$65,000, has filed articles of incorporation with the Secretary of State.

Mendota, Ill.—J. D. Towers & Sons Co. has been incorporated. Capital, \$130,000. Manufacturing and deal in agricultural machinery. Incorporators, J. D. Tower, G. D. Tower, D. C. Tower.

Newark, N. J.—Articles of incorporation of the Toledo Scales and Cash Register Co. have been filed in the office of the Essex County Clerk, in Newark. The authorized capital is \$1,000,000. The incorporators are Lenox S. Rose, C. Edwin Young and Edward J. Whitney. The company's purpose is to manufacture scales and cash registers, and its principal office is given as 20 Bruen Street, Toledo, O.

New York, N. Y.—The Crowe Stoker Co. has been incorporated for the manufacture of "Crowe Stoker" grates, furnaces and other such goods. Capital stock, \$30,000.

Portland, Ore.—Oregon Hardware Mfg. Co. has been incorporated with a capital stock of \$10,000. Incorporators, W. E. Robertson, A. E. Costlow, W. B. Peacock.

New York, N. Y.—Euphrat Mfg. Co. has been incorporated to manufacture window guards. Capital, \$25,000, and directors, Theophile Euphrat, of Rowayton, Conn.; C. W. Mady, of Norwalk, Conn., and Edward Devoe, of New York City.

New York, N. Y.—Waterbury Rubber Mfg. Co. has been incorporated. Capital, 100,000. Directors, A. H. Howe, Jersey City; G. A. Howe, Vineland, N. J.; W. J. Beairsto, Yonkers.

Quincy, Ill.—The charter for the Quincy Pattern Co. has been filed for record. The capital stock of the new enterprise is \$1,200, which is equally divided between George Koehler, Max R. Lehmann, William J. Stafford, Henry C. Dietrich, H. Louis Kich and J. W. Vorndam. The purpose of the company, as stated in the articles of incorporation, is to make and sell stove and machine patterns and do a manufacturing business.

Shelton, Conn.—The O. K. Tool Holder Co., George W. Conklin, manager, has just received a patent upon its novel tool holder which is the invention of Mr. Charles W. Grant, of Derby. This tool is adapted for general use upon lathes, planing machines,

shaping machines, etc., and is especially adapted to hold a boring tool, thereby doing away with special tool holders heretofore necessary in using boring tools.

Washington, D. C.—Judge J. K. M. Norton, in the corporation court, has granted a charter to the National Roller and Ball Bearing Co., the object of which is to buy, own and control the inventions of W. J. Brewer, for anti-friction devices. The sum of \$200,000 was named as the capital stock. The following are the officers: Charles E. Wood, president; William S. Knox, vice-president and treasurer; William E. Leary, secretary and general manager, and William John Brewer, mechanic and contracting engineer, all of Washington.

Yonkers, N. Y.—D. Saunders' Sons Co. has been incorporated to manufacture pipe threading and cutting machinery. Capital, \$75,000. Directors, Alexander Saunders, L. M. Saunders and Ervin Saunders, Yonkers.

### Changes and Improvements.

Antrim, N. H.—The Goodell Cutlery Co. are making quite extensive repairs near shop No. 4, where they are repairing the flume and putting in a new steel penstock three feet in diameter.

Germantown, Pa.—Specifications issued by Architects Schermerhorn & Reinhold, asks for bids on a second-story addition to the plant of the Germantown Tool Co., Armat Street and Germantown Avenue. The roof of the new apartment will be galvanized iron and slag.

Hartford, Conn.—The National Machine Screw Co. has filed a certificate of increase of capital at the State Secretary's office. The number of additional shares is 440, making a total of 1,440. C. E. Billings, Silas Chapman, Jr., S. M. Bronson, Ernest Cady and Truman Cowles, a majority of the directors sign the certificate.

New Haven, Conn.—The National Wire Corporation are now at work on plans for rebuilding their plant which was destroyed by fire some time ago. The details in regard to construction have not all been fully decided upon as yet, but the plans will be hurried along as fast as possible. The specifications for the boilers and engines for the power plant have been completed and it is expected that the contracts for this part of the work will be given out in the near future.

 West Rutland, Vt.—Clarence Sargeant.  
 Westport, Conn.—Frederick Kemper.  
 Wheeling, W. Va.—Frank Hollenbeck, who was formerly connected with the Baker Gun & Forging Co., is now in Wheeling, W. Va., where he has organized a company for the manufacture of single and double barreled shot guns and a combined shot gun and rifle.

### Changes and Improvements.

Bellows Falls, Vt.—Lawrence Cannon, Atkinson Street; closed.  
 Brockton, Mass.—William Bonnick, removed to East Main Street.  
 Chillicothe, O.—Walter J. Kellhofer is moving his bicycle and plating establishment a few doors north into one of the large store

rooms in the Clinton House Building. The place has been fixed up in good order and will afford him plenty of room for his growing business.

Columbus, O.—Application has been made to the Court of Common Pleas for the dissolution of the corporation of the Columbus Bicycle Co. The application was made by the directors, George H. Kelly, Clayton K. Fauver, George Cook Ford, Francis G. Coates and Paul Walton, who recite that the Columbus Bicycle Co., which was organized for the manufacture of bicycles, is not now engaged in such business or any other business, and that the company has disposed of all its assets, and that the company owes no debts.

Conneaut, O.—John Hart, the bicycle repair man, whose shop at 662 Main Street, was burned out recently, has opened a shop on Harbor Street, near Park Avenue.

Danvers, Mass.—L. J. Ross, closing out bicycles.

Elmira, N. Y.—Manchester & Becker have purchased the bicycle business of Ralph M. Frisbie.

Fair Haven, Vt.—W. I. Smith succeeds Norton Hardware Co.

Haverhill, Mass.—F. H. Fernald, Washington Street; closed.

Ivoryton, Conn.—Clarence Bushnell succeeds Arthur Cheney.

Los Angeles, Cal.—Jay Bros., 756 South Spring Street, succeed Sunset Cycle Co.

Springfield, O.—Suit for the appointment

of a receiver and the dissolution of partnership has been filed by John G. LeFevre, William LeFevre and Ferdinand Starr, all members of the Starr Rubber Tire Co. The petition states that they were unable to agree upon the manner in which the business should be conducted and that it will be better for all concerned to dissolve the firm.

Springfield, O.—Ed. A. Neff, formerly of this city, is now running a bicycle store in Columbus.

Westfield, Mass.—The Board of Trade has received formal notice from the American Bicycle Co. that its new factory building, containing 30,000 square feet of floor space, is completed in accordance with the contract entered into between the company and the board last Spring, calling for its completion by July 15.

Wilmington, Del.—D. Ross & Son, closing out sale of bicycles advertised.

### Recent Embarrassments.

Boston, Mass.—J. J. Francis, a prominent dealer of Boston, has failed. He was formerly manager of the Liberty branch in that city, but purchased the business about two years ago and has since conducted it on his own account.

Milwaukee, Wis.—William A. Bremer, a bicycle manufacturer, has filed a petition in bankruptcy in the United States Court, scheduling his liabilities at \$3,761.89 and assets at \$2,253, of which he has a stock on hand valued at \$1,250.

## HARDWARE MANUFACTURERS RECORD. Continued.

Oakland, Me.—The American Axe and Tool Co. have sold their scythe shop to the Waterville & Fairfield Electric Light & Power Co.

Ottawa, Ill.—The American Hardware Mfg. Co. is building a large addition, which will treble the capacity of the present plant, in which \$5,000 worth of new machinery will be added.

Pittsburg, Pa.—The Independent Wire Co. has optioned 90 acres of property at Dravosburg on the Monongahela river, opposite McKeesport, for \$360,000.

Quincy, Ill.—Ohio Street, west of Front, has been ordered vacated by the council. This is done in order to give the Excelsior Stove Mfg. Co. sufficient room to erect a large addition to its plant.

Reading, Pa.—The Prizer-Painter Stove Co. will increase its capital stock from \$200,000 to \$350,000.

Richmond, Va.—The plans for the removal of the Southern Stove Works to new and more extensive quarters are rapidly maturing. The company will occupy the Pace Abattoir Building, in the West End, and the building will be remodeled to some extent, suitable for the Southern Co.'s business.

Springfield, O.—The Bettendorf Metal Wheel Co. is building a new \$3,000 pressed

brick office building, which will give it increased facilities for transacting its business and enable them to put more room in the shop.

Springfield, O.—Within a short time Mast, Foss & Co., making pumps, wind mills and lawn mowers, will be prepared to galvanize their own products. Heretofore this coating of zinc was put on in Cincinnati, the freight charges and delay incident to this feature of the work being quite a handicap. The big kettle for melting the zinc has arrived on the grounds, and the galvanizing plant will soon be in working order.

St. Louis, Mo.—Plans have been drawn up for a new factory for the Ludlow-Saylor Wire Co., to be located at Newstead Avenue and the Wabash Railroad tracks. Work on the structure will commence immediately.

Sycamore, O.—Holmes & Carr, of Delphos, have leased three acres of ground and will move their handle factory here as soon as buildings can be erected. Forty men are employed in the factory, some of which will come from Delphos. Contracts for two buildings 40 x 100 feet and 40 x 70 feet will be let within the next few days.

Taunton, Mass.—The Atlas Tack Co.

have signed a contract for the new mill to be built at Fairhaven. Work has been begun, the ground being broken for the foundation for the chimney and for grading of the mill itself. The new mill will be 620 feet long by 220 feet wide, and will be of one story with a saw-toothed roof to give the best possible light to every part of the mill. The front will be two stories, for the offices, and there will be a power house and chimney, the latter having a 7-foot flue and will be 180 feet high.

Toledo, O.—The company which a few days ago concluded the purchase of the plant of the De Vilbiss Scale Co., and which will also consolidate with it a cash register plant now located at Springfield, O., has just concluded the purchase of the lot at the corner of Monroe Street and Albion Avenue, and will erect thereon a four-story brick plant.

Vernon, Ind.—The Wagner Plow Co. make public the announcement that it will establish a factory in Indianapolis at the juncture of the Belt railroad and Churchman Avenue. Work on the buildings has been begun. Four brick buildings will be erected, the largest to be 50 x 350 feet, and sufficient room will be left for future additions if required.

## For Sale.

**A STOCK OF HARDWARE.** Will average about \$5,000. Building, 50 x 70, 3 floors, brick, for \$5,000. In a live Virginia town. Full particulars given on application. Address J. K. PENDLETON, Clifton Forge, Va. 85

**MANUFACTURING,** Small Hardware, one-half interest, and full management. Established 35 years. Net Assets \$50,000. No liabilities. Eastern city. Principals only. Manager out of health. For full particulars and interview, address Genuine, care HARDWARE, 275 Broadway, New York. 24

**STOCK OF HARDWARE, TINNERS' TOOLS, ETC.**—Inventory about \$2000. All in first-class condition, in one of the best dairy districts in Central New York. Nine miles from any other Hardware store. Best of places for a tinner. Reason for selling, other business. Address W. D. POST, Slateville Springs N. Y. 236

## Agency Offered.

**LIVE HARDWAREMEN**—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men flow on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, 275 Broadway, New York. a

**TO MANUFACTURERS.**—Wholesale house with foreign branches and connections is willing to undertake the selling agency of one or two good marketable lines. This is a favorable opportunity for manufacturers to secure reliable representation here in the East and abroad. Ample warehouse facilities. Address WM. SOMERVILLE'S SONS, 68 Pine Street, New York. 225

## Agents Wanted.

**TO SELL THE "NULITE,"** our incandescent vapor lamp. Sells almost on sight. An excellent opportunity for the live Hardware dealer, or anyone else who wants to make money. Ask for catalogue and terms. Address CHICAGO SOLAR LIGHT CO., Garden City Block, Chicago, Ill. 116

## Business Opportunity.

**EVEN ONE-HALF INTEREST,** and position of Secretary and Treasurer offered in paying manufacturing plant to some one with \$20,000. Must be willing to devote his time, and have executive ability to help build up big business. Advertiser controls thoroughly established business, of good-reputation for product; also several excellent and valuable specialties of unlimited scope. Investigations solicited. Address HALF INTEREST, care HARDWARE, 275 Broadway, New York. 237

**WANTED, HARDWARE JOBBER AND RETAILER.**—Perth Amboy, N. J., offers an exceptionally good opportunity for a live man to open a Hardware store for both jobbing and retail business. This town has already 19,000 inhabitants, an increase of 86 per cent. over census of 1890 and is still growing. Buildings are going up in every part of the city, and the demand for Builders' Hardware is very heavy. There is no store of this kind inside of 10 miles. A fine \$18,000 building is all ready for the right party. Large, well-lighted ground floor and basement. Can have second floor if it is needed. Address S. A. WILDER, 148 Smith Street, Perth Amboy, N. J. 232

**Thousands Dead  
 and Dying.**

Thousands of once prominent brands of goods are dead or being killed by the great army of imitators.

Anyone simulating your label or package is robbing you, and can be stopped.

Don't be among those whose business is being ruined by Trade Mark Pirates.

The only organization that can help you, is

**THE INTERNATIONAL  
 TRADE MARK  
 PROTECTIVE COMPANY.**

320 Broadway, New York, N. Y.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## **THE O K LAWN TRIMMER.**

**SIMPLE, DURABLE, EASY TO OPERATE.**

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

INTERSTATE MILITARY  
MATCH,

INTERSTATE REGIMENTAL  
TEAM MATCH,

ALJ. COMERS MILITARY  
MATCH.

NEW JERSEY RIFLE  
ASSOCIATION TROPHY  
MATCH,

WINCHESTER MATCH,

REVOLVER RE-ENTRY  
MATCH,

REVOLVER TEAM MATCH;

in fact almost everything  
within sight.

Peters Cartridges are all loaded  
with the famous King's Semi-  
Smokeless.

**THE PETERS CARTRIDGE CO., Cincinnati.**

Eastern Branch, T. E. KELLER, Mgr., 80 Chambers St., N. Y.  
Hibbard, Spence, Bartlett & Co., Chicago, Ill.

There is no kind of advertising so  
cheap as newspaper advertising and  
there is no kind that produces such im-  
mediate and satisfactory returns. The  
posting of bills, the use of street car  
signs and the mailing of circulars costs  
infinitely more per thousand for the  
same amount of advertising and it is  
seldom so effective.

### Automatic Lingoe Machine

Producing lingoes at the rate of 60'  
per minute, flattening, rounding and  
punching the holes in the end thereof.  
The machine is applicable to a large  
variety of long pieces required to be in-  
dented, or different forms to be made,  
leaving the larger portion of the wire  
straight.

If you cannot procure goods of their make from your jobber we shall be pleased to supply full information on application.

**ALFRED FIELD & CO.,  
93 Chambers Street, New York.**

**WHY IS THE**

**O.K. THE BEST ROTARY  
WASHING MACHINE?**

**BECAUSE**

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

Manufactured by **H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.**

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00    A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25    A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00    B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25    B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/2 x 8 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, - - 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches.*

FOUR EDITIONS:

D, 240 pages, - - \$1.50  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**    For Chisels, turn to **CH**    For Iron, turn to **IRO**  
" Parers, Apple " **PA**    " Cutlery, " **CUT**    " Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

A D G U SCB  
A N HAW SCR  
A U HAN SCY  
A W HAT SE  
A X H I SHB

*Fac Simile of Indexing.*

Price Book E—350 pages, 7 1/2 x 10 inches, canvas tab indexing. Price, \$5.00.

Price Book F.

A D DIE MF SI  
A N DIQ MO SK  
A U DO NAI SL  
A W DR2 N5 SN  
A X DRI NU SO

*Fac Simile of Indexing.*

556 pages, 8 1/2 x 11 inches, black leather tab indexing with gilt lettering. Price, \$7.50.

Note.—In Price Books B and F there is an Index Character to EVERY PAGE.

320 Broadway, New York, N. Y.

# HARDWARE

The E. Hartzell Cutlery Co., Gettysburg, Pa., although but recently placing their finished product upon the market, report having already received a most encouraging demand for their goods. Agencies have been established in New York, Baltimore, Chicago and San Francisco, and negotiations are pending for representation in other leading cities.

A new and larger edition is in preparation of "The Green Book of Hardware Specialties," issued by the Smith & Hemenway Co., 296 Broadway, New York, in the interest of their extended trade, and well advertised by them, the demand for this popular compendium of useful tools and appliances having exhausted the large edition previously printed.

John J. Teeple, well known to the Hardware trade of the country from his long connection with it, has recently associated himself with the progressive business of Fayette R. Plumb, Inc., in whose interest he will travel in the East and Middle West. Having represented the Russell & Erwin Mfg. Co., and subsequently the Van Wagoner & Williams Hardware Co. upwards of twenty years, has brought him a host of friends and customers with whom he has always been deservedly popular. In his new sphere of action as representative of a popular house, and backed by a fine line of goods as trade winners, he cannot help but be welcomed by the trade in his territory.

We are advised by the J. Stevens Arms and Tool Co., Chicopee Falls, Mass., that the "Stevens-Pope" rifle barrel won all the events at the recent shoot of the Bundefeste at San Francisco. They naturally feel exceedingly "chesty" over this indication of its admitted excellence.

Consul Ruffin reports from Asuncion, May 8, 1901, that the importers and exporters of that city have formed a company to control the exports of Paraguay. The company will make advances to producers, receive products in consignment for export on commission, and transact such business as may in the opinion of the board further the interest of the company. In view of the generally prosperous conditions and the fact that no failures have taken place for the last few years, business men in the country seem disposed to invest capital; and there is every hope, says the consul, that Paraguay will take advantage of her improving credit in foreign markets and extend her commercial relations.

The Boston Belting Co., Boston and New York, have recently issued three catalogues which give information in detail regarding the various kinds of canvas, linen, rubber and rubber-lined fire hose and suitable fittings manufactured by them; also rubber-covered rollers and rubber-covered belts, including heavy conveyor belts, in addition to some formulas for computing horse-powers and pulley diameters giving greatest efficiency. The catalogues are carefully prepared, handsomely printed, and are of standard size, 6 x 9 inches.

Many advertising failures result from the assumption that the reading public is better informed than it really is—about the article advertised. Always work in points which the public should know about, if such a thing is possible.—*Advisor.*

Bond & Powell, Hardware merchants at Converse, Ind., have discarded their old style of store fixtures and substituted a fine variety of Warren Cabinets, Cases, etc., in their place.

## A Guide To South African Ports.

An unusually useful handbook to shippers and others having business in South Africa will be found in the "Guide to South African Ports." The book contains information that is of much value to shipmasters and shipowners, as well as to the shipping public generally; gives the customs regulations, harbor dues, landing, shipping and trans-shipping charges, pilotage and wharf regulations, together with a lot of other details arranged in very convenient form for ready reference. The work is published by Messrs. Mitchell, Cotts & Co., with offices at 150 Leadenhall Street, London, E. C., England, and branches in the principal South African ports.

## "Roller Bearing" Sweepers.

The "Roller Bearing" Sweepers exhibited by the National Sweeper Company at the recent furniture exposition held at Grand Rapids, Mich., created a great deal of interest among those buyers whose firms deal in Carpet Sweepers. This is the newest and latest feature in Carpet Sweeper construction; it is a very simple device, there being no complicated parts or delicate springs to get out of order or wear out; in fact, do not know how it could be made more simple. No part of the device shows from the outside of the Sweeper, and the increase in weight is not to exceed one-half ounce. It consists of rollers about one-eighth of an inch in diameter and five-eighths of an inch long, turned from solid high grade steel, which are placed inside of the Sweeper wheel hubs in such a manner as to revolve freely around the axle. This device does away with practically all friction, and makes the "National" Sweeper at least fifty per cent. easier running. Hereafter, their highest grade Sweepers will be furnished with "Roller Bearings" when desired, without extra charge.

The Company write us that they are getting out some printed matter describing their new "Roller Bearing" device, and in our next issue we will doubtless show a cut of this new feature. To those interested, we would suggest that they write the National Sweeper Company for catalogue and prices.

## Under Improved Conditions.

That it pays the Hardware dealer to make a fine display of his stock must be apparent from the unusual number of large and small retail stores which are month by month discarding old fixtures and replacing them with modern ones. The J. D. Warren Mfg. Co., Chicago, have entered advance orders for new styles of Cabinets, Cases, Bins, etc., for this purpose, a few of which are listed below:

Loftus & Loftus, Park River, N. D.; R. M. Pyburn Hardware Co., Roxton, Texas; C. H. Thomas & Co., Kent, Iowa; Z. C. Miles & Piper Co., Seattle, Washington; Geo. E. Brigham, Shelby, Neb.; H. S. Bettes Hardware Co., Paris, Texas; Hahne & Co., Newark, N. J.; Marifjeren & Overbye, Park River, N. D.; O. E. Hasle, Park River, N. D.

## New Process of Converting Petroleum.

The Standard Oil Co. has agreed to pay \$5,000,000 for a patent process by which petroleum is converted into a gas that produces intense heat and light at a cost infinitely smaller than any other known process. The invention has been tested publicly in Salt Lake, and has worked satisfactorily. The light is stronger than the electric arc or calcium, and the tests are said to show that as much heat can be obtained by this method from a barrel of crude oil as is ordinarily obtained from a carload of coal.—*Ex.*

# HARDWARE

VOL. XXIII.

AUGUST 10, 1901.

NO. 9.

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in** should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

HARDWARE PUBLISHING CO.,

275 Broadway, New York.

A. E. BOLLES,	Advertising Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

The ending of the drouth which was playing sad havoc with the corn crop, especially throughout the South and West, has improved the condition of affairs in those sections. The gratifying fullness with which the rains drenched the parched earth relieved apprehensions of great loss and created more hopeful conditions. The prospects are we shall have nearly full crops of the agricultural products that were the most seriously endangered.

The jobbers have during the past fortnight received many orders for goods which had been held back while waiting to learn more regarding the diminution in crops which would impair the anticipated local demand in many sections. As far as crop conditions are concerned, the outlook is considered fully up to an average of good years, and a large trade under normal conditions is looked forward to with daily increasing confidence.

At the present writing the anticipated early settlement of the strike among the iron and steel workers seems a more remote possibility. The aggressive character of the methods of the opposing forces indicates a season of cessation from production, except as obtained through non-organization labor, that will be keenly felt by all manufacturers who rely upon the mills now on the eve of suspension for regular supplies, with a possible continuance on specified dates. The shortage of material will soon be severely felt by those plants whose stock of raw material is now at an extremely low ebb. The gradual stiffening up on quotations on account of the fear of a short supply also affects the market conditions, having a disturbing

influence; and while it is not possible to foresee what may prove to be the results of a period of enforced idleness for such immense productive facilities, the future prospect is looked over with some degree of anxiety by those interested in the outcome.

The sales during the month of July by the wholesale houses have been of a character that endorsed the promising hopes so freely fostered by the buyers in the industry. The volume of business transacted by the Hardware trade and analogous lines has had the effect of still further depleting the stocks held by the jobbers which at this season are preferably light. Many orders for Fall requirements are booked, and arrival on specified dates anxiously anticipated. A natural fear possesses the buyer who has been laggard in placing orders to supply known shortages of stock for Fall trade, whether the strike will create generally a higher range of prices, founded on a possible scarcity and inability to deliver on the part of the not too sanguine manufacturer. The prevalent feeling regarding the coming season's prosperity having been a sanguine one in every part of the country, this uncertainty arising like a cloud over a day of sunshine, may make necessary a reconsideration of the profitable character of the season's business, when the requisite supplies to create success may not be forthcoming. Manufacturers are extremely cautious in regard to accepting large orders when it may tax their ability to fill them promptly through inability to obtain the needed material. As it would take a good deal to stifle the feeling of confidence of the Fall trade's profitable outcome, the natural hope is all pervading that some honorable way may be found to end the destructive inactivity fatal to so many projects.

One customary source of worry is removed by the disturbance in the labor market, and that is the fear of unsettled lower quotations under existing conditions. If any change is noted, it will have an upward tendency, and that makes easy the speculative feeling covering stocks in general prominent in the mind of the self-possessed buyer. The stability in prices that may be assumed as the most satisfactory condition of present markets will work for the general good and promote a sense of security that might otherwise be wanting.

## On Returning Goods.

The constant returning of goods is a source of great annoyance and extra expense, requiring extra clerical service and more work in many departments. It is also in many cases a source of positive loss, by reason of goods coming back in a damaged condition, or so long after purchase as to be unseasonable—and the wholesaler divides his feelings (!) between the fear of loss on the goods so returned, and on the other hand, the fear of losing a customer if he refuses to make the credit.

The retailer who is guilty of this practice, evidently does not realize that he is gaining an unenviable reputation in the business world, and that it affects his credit standing in a very great degree.

However, the wholesaler is very largely responsible in furnishing the excuse for the return of goods. Orders are frequently made out in a careless manner by the salesman, leading to mistakes in filling. Still more frequently are substitutions made in the hope that the customer will keep the goods when they are at his store, of course knowingly taking the risk of their very just return.

We must not overlook the fact that misunderstandings often occur in filling orders, and for all these reasons the customer is certainly justified in making returns.

By such faults of the wholesale house the customer falls

easily into the habit of returning goods, and is then not always too particular about having good and sufficient cause for his action.

This is a case where reform must begin at home. Let the salesman use more care in taking the order and the house in seeing that it is correctly filled, and the annoyance of having goods returned will be much reduced.

The aggravated cases will then come more forcibly to the attention of credit men, who will find little trouble in appraising such actions at their true value.—W. A. GIVEN.

### Sources of Information Respecting New Accounts.

Special information of this character consists of facts and opinions obtained from banks, attorneys and other local authorities in the customer's own town or county. There are in all good-sized towns and county seats, one or more attorneys who make a specialty of trade collections. These attorneys are naturally pretty well posted on the standing of the merchants in their vicinity and can usually be relied on to give fairly accurate reports. Allowance must be made, of course, for the possibility of the attorney being influenced by friendship or personal interests. The value of all credit information, but this class in particular, depends on obtaining reports from as many independent sources as possible. Any one bank may have an unrecorded chattel mortgage or be carrying the customer beyond the conservative limit, and may therefore be interested in helping him increase his stock, but two or more banks will not usually sustain those relations to the same individual, neither will all the attorneys in the town be interested in favoring the same retailer for personal, political or other reasons. Therefore, by obtaining opinions from several sources and comparing them the actual conditions can be arrived at pretty accurately. It is not intimated that any large percentage of the reports which one might obtain from local banks and attorneys would be influenced by personal interests. On the contrary, the tendency is to make a fair and truthful report in a great majority of cases, but it is the exception rather than the rule that the credit man must foresee and guard against. If a considerable amount is involved, it would be extremely unwise to accept as final the report of any one bank or attorney unless personally known to be disinterested and reliable, and what is true of banks and attorneys, is also true in a less degree of mercantile agencies and trade references.

There are a number of collection agencies who, for a trifling cost, furnish inquiry blanks to be sent to their attorneys, of whom they furnish a list. There are also good lists of attorneys which can be obtained for use with private inquiry blanks.

This fourth class of information is important because it is always available, its chief value lies in the fact that it comes direct from people who are on the ground and it is always down to date.

It cannot be expected that banks and attorneys making free reports will go into details to any considerable length. The most important feature of such reports is the answer to a question something like the following: "From your knowledge of the case, would you consider safe a credit of \$150 on three months' time?" In the answer to this question you get from a reliable local authority a conclusion based on a knowledge of the customer, his personality and prospects, which it would be impossible to put into a detailed report. It would be better to act on the unanimous "yes" or "no" to the above question from three or more local authorities known to be reliable and conservative, than to rely on your own judgment after reading the most elaborate detailed reports possible to obtain through mercantile agencies. All the various phases of a doubtful case cannot be expressed in a report, as they are known to those who have a personal acquaintance with the customer and his surroundings, and where possible to obtain

opinions of this kind from reliable sources, they are of great value to the credit man.

The surest safeguard against unreliable and incomplete reports is to secure information from the largest number of sources available and make comparisons. If the applicant is known to be particularly popular or unpopular, this fact should be taken into consideration in interpreting reports. The results which depend on the rejection or acceptance of a first order, may be far more weighty than appear at the time and the credit man should feel the great importance of making a wise decision. Become so well acquainted with your new customer that when his name is mentioned, all the important facts surrounding his case come instantly to mind. This is possible even where a very large number of dealers are sold, and it is a faculty which the credit man should cultivate.

The success or failure of any business depends more on the wisdom and discretion of the credit man than perhaps any other one thing. It is easy to decline all doubtful orders, but such a course reduces the sales and narrows the salesman's opportunities. The business of well-rated firms is competed for to such an extent that it is not always possible to sell them, and the credit man who is capable of handling a class of risks that are ordinarily considered doubtful and by drawing the line at the right point, do so without sustaining too many losses, is a most valuable man. To do this, all available information must be brought into use and carefully considered.

FRANK H. MAIN.

### Death of Philip R. Woodford.

The Hardware trade will learn with deep regret of the sudden death of Philip R. Woodford, for many years a stockholder and director of the Wells & Nellegar Co., wholesale Hardware dealers, 72-76 Lake Street, Chicago. Mr. Woodford died July 31st at his Summer residence at Glencoe. He left the gun and cutlery department of Wells & Nellegar, of which he had charge, at 3 P. M., July 30th, apparently in the best of health and spirits. Early the next morning his wife left the house to call on a neighbor and on her return Mr. Woodford was dead. The cause of his death was presumed to be heart failure. He was a member of the Chicago Athletic Club and the Skokie Golf Club and resided at Evanston, Ill. He leaves a widow and one son, Leonard, aged 14 years. Having been associated with the fellow members of his firm for nearly thirty years, his loss will be severely felt by those who in friendship and partnership have held him in high esteem for so long a period, always active in every movement which promoted the prosperity of his company. This is the first break in the circle of young and progressive partners which originally formed this company after an association as employees with the formerly prominent firm of Miller Bros. & Keep.

### Electric Power Transmission Line 140 Miles Long.

What is said to be the longest transmission of electric power in the world is that running from Yuba River to Oakland, Cal. Electric power is generated on Yuba River and is used in the operation of street cars in Oakland, 140 miles distant. "The power is generated by turbine wheels. The cable, 140 miles in length, is six-tenths of an inch in diameter and is of copper, with aluminum alloy, which will prevent oxidization. This cable is suspended across Carquinez Straits by a span 4,400 feet long and 300 high. The test made on April 27th is reported to be one of the most successful in the history of electricity, a current of 40,000 volts having been transmitted the entire distance with a loss not to exceed 5 per cent."

Simon Frost remarks: "Men ain't never satisfied. When they climb to the top o' a mountain they build a tower so's to git the view from the roof."

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

### Stock and Bonds, Personal Property. Wife Has no Dower in Personal Property of Husband.

**QUESTION:** I own certain stocks and bonds in several companies and should like to know who will be entitled to these when I die. I have made a will. Kindly inform me whether my wife has any dower interest in these bonds independent of my will.

**REPLY:** If you have made a valid will you may dispose of your property, real and personal, in whatever way you choose. Your wife would have no dower interest in any personal property owned by you and you could either bequeath it to her or to any one you wished. You have the same power as to your real estate, except, however, that you cannot defeat your wife's right of dower in all the real estate owned by you during your marriage. You can, however, make your wife a gift in your will which, if your wife accepts, she will take instead of her dower in all your property. She has the right, however, to elect whether she will take the gift instead of the dower. She may have either, but it can be arranged so that she cannot have both.

A wife's dower consists of a life interest in one-third of all the real estate of her husband, but this estate applies only to real property and has nothing whatever to do with personal property.

### Collection of Alimony—Debtor May Be Imprisoned.

**QUESTION:** In 1898 my wife obtained a divorce from me and the decree of divorce directed me to pay her \$20 per week alimony as long as she should live. I have not paid this amount regularly, and my wife's attorneys have been endeavoring to serve papers on me. Kindly inform me what the effect would be if I am served with papers, and whether I could be sent to jail for not paying the alimony directed by the court.

**REPLY:** Where the defendant in an action for divorce after judgment is obtained against him, has no property which the plaintiff could sequester, the plaintiff must proceed to collect alimony in the following manner: She must first demand the payment of the alimony, and if the demand is not complied with, an order to show cause why the defendant should not be punished for contempt for his failure to pay alimony is obtained from the court. On the return day of this order, unless the defendant can show good reasons why he should not pay the alimony, the court will make an order adjudging him guilty of contempt, and will also issue a warrant of commitment directing the sheriff to take the defendant into his custody and to hold him until the amount of alimony which the plaintiff claims at that time is paid. If, therefore, the defendant fails to pay and he can be found by the sheriff within the county where his commitment is issued, he will be arrested and sent to the county jail, where he will have to remain until he pays the sum specified in the commitment or is lawfully discharged. If the amount of alimony is under \$500, the defendant cannot be confined in jail more than three months. If, on the other hand, the amount of alimony for which he is committed is \$500 or more, he may be confined as long as six months, but not longer.

### Attachment Against Foreign Corporations.

**QUESTION:** A certain New Jersey corporation having an office in New York City is indebted to me to the extent of \$1,000, which they refuse to pay. The claim arises from their failure to perform a contract, by which failure I lost \$1,000; I have recently discovered that they have a considerable sum of money on deposit in one of the banks of this city, and should like to know whether I can attach this money in the bank, or how I can reach it.

**REPLY:** An attachment can only be obtained in certain cases. One of these instances is where the plaintiff demands judgment for a sum of money only upon a contract, express or implied, other than a breach of contract to marry. Your action would fall within the class of cases indicated. Our statute, however, places many other restrictions upon the obtaining of an attachment. An attachment can be obtained against a non-resident of the State or a foreign corporation upon the ground of non-residence, and certain other grounds are specified by statute. If, therefore, you are a resident of the State and your debtor is a foreign corporation, you would be entitled to an attachment on the cause of action described, and if obtained, you would be unable to reach the defendant's money in the bank. If, however, the attachment were set aside for some technical fault in the papers, you could not hold the money in the bank. The law affecting attachments is extremely difficult and technical, and the utmost care must be taken by the attorney in the preparation of his papers. Probably at least half of the attachments obtained in this State are set aside upon legal technicalities.

### False Representations which are Material Avoid a Contract.

**QUESTION:** Some time ago an agent for a large factory came to my store to sell his goods. He described the quality of the goods, and as an inducement for me to buy a certain line of goods, he agreed that he would not sell this particular line of goods in that town, and he stated that his instructions from the factory were to make this offer to the best dealer in each town as an inducement for them to take a quantity of the particular stock in question. Thinking that I had an opportunity to get hold of a line that no one else in town would have, I gave my order. The goods arrived, but two days after their arrival I noticed that my competitor across the street had his window full of exactly the same line of goods as the lot which I had just received. I at once boxed up the stock and sent them back to the house I had bought them from, giving as my reason that I had been told by the agent that no other dealer in town would have any of the goods. Kindly inform me if I can avoid paying for the goods if I am sued.

**REPLY:** In the event of this house suing you for the agreed price of the goods in question, we are of the opinion that you would have a complete defense to such an action upon the facts stated. In our opinion, the representation made by the agent to the effect that you would have the exclusive sale of this line of goods in your town, was a material representation. Relying on this representation, you entered into this contract. That the representation was false, appears by your statement of facts. We are, therefore, of the opinion that you could successfully set up the defense to this contract, that it was entered into upon the false and material representations of the plaintiff's agent. In such a case as this, we are of the opinion that a principal is responsible for such statements of his agents.

### Wanted, More Vacations.

More time given to innocent pleasure and healthful recreation is the very thing that the average American needs to offset the hurry and worry of his business life. He needs it to keep his head clear and his heart true. He needs it to prevent him from degenerating into a sordid, selfish dry-as-dust, with no thought nor ambition above that of money-grabbing. Rightly considered and properly spent, the vacation period may claim a place in every well-ordered life as truly as the time devoted to business duties. No other view can be taken of the matter by any man who has rational views of the real objects of human existence.—*Leslie's Weekly*.

### "Ay! There's The Rub!"

"There is no doubt that this scheme will pay," said the promoter.

"Yes," answered the purchaser of stock. "I suppose so. But who is to get the money?"—*Ex.*

### The Michigan Retail Hardware Dealers' Association.

The annual meeting of the Michigan Retail Hardware Dealers' Association will be held in Detroit, August 14th and 15th, the following being the official programme:

WEDNESDAY, AUGUST 14, 1901.  
MORNING SESSION, 10 O'CLOCK.

(Standard time used.)

Meeting called to order by President G. W. Hubbard.

Roll call by secretary.

Appointment of Committee on Credentials, Resolutions, Constitution and By-Laws and Question Box.

Address of welcome, Hon. W. C. Maybury.

Response by President Hubbard.

Reading of minutes.

Reception of communications.

Recess until 2 P.M.

AFTERNOON SESSION.

Report of Committee on Credentials.

Meeting goes into executive session.

Annual address of the president.

Annual report of the treasurer.

Annual report of the secretary.

Paper—"The Best Methods of Conducting a Retail Hardware Store," R. R. Chandler, Coldwater, Mich.

Discussion of same.

Address—"Credit and Collections," R. J. Cleland, of the Commercial Credit Company of Detroit and Grand Rapids.

Adjournment.

Get your "Tashmoo" tickets before you leave the hall.

Hand in your questions for Question Box.

THURSDAY, AUGUST 15, 1901.

Delegates meet at 8.15 A.M. at White Star Line dock (foot of Griswold street) and board steamer "Tashmoo" for the Flats. Tickets should be obtained from the secretary at the Cadillac, or on the dock.

If necessary a business session will be arranged for on the boat, but it is hoped this will not be necessary.

Arrive at Mervue Club at noon, and go at once to dining hall for dinner.

1.00 P.M.

Convention meeting at Mervue (place will be announced during dinner).

EXECUTIVE SESSION.

Meeting called to order.

Report of Committee on Resolutions, Constitution and By-Laws.

Consideration of same.

Report of Committee on Question Box.

Consideration of same.

Address—"National Association and its Possibilities," by a representative of the National Association of Retail Hardware Dealers.

Discussion of same.

Paper—"Store and Window Dressing and the best method of keeping stock in order," by Henry C. Weber, of Detroit.

Discussion of same.

Unfinished business.

New business.

Election of president.

Election of vice-president.

Election of treasurer.

Election of secretary.

Election of executive committee.

Miscellaneous business.

Adjournment.

Supper at Mervue and return trip to Detroit on the "Tashmoo."

There is every reason to believe this will be a most successful affair, and advance this progressive Association still further on its prosperous career, protecting so thoroughly the interests of the merchants who compose its membership. As

may be noted in the programme, many papers of interest and importance will be delivered by prominent delegates, having reference to the conduct of this great business by methods founded on a wide experience. The many questions seriously entertained at these occasional gatherings have had an extended influence in freeing commercial conditions from the snags and pitfalls formerly so prevalent, and by a wisely organized action have lessened the many anxieties and increased the pleasure with which business should ever be surrounded.

In order to stimulate an active participation in this annual meeting, the following memorandum slip was sent to each member, accompanying the programme. Its effect cannot be otherwise than a beneficial one:

To Members:

As a paid-up member of the Michigan Retail Hardware Dealers' Association in good standing, it is your personal duty to attend this meeting, and if possible to bring some neighboring Hardware dealer with you for initiation. The times demand a more perfect unification of interests. Organization is waxing greater every year. There never was a time when the possibilities for practical dollar-bringing results were half so great as now. Do your part on this occasion and be a committee of one on membership. Last year many of the dealers did this. It is possible for all to do it in 1901. The Michigan Association will progress and grow no faster than the personal interest of its members.

Let us double our active membership at this meeting.

THE MICHIGAN RETAIL HARDWARE DEALERS' ASSOCIATION.

### The Traveling Salesman.

There was once (and may be yet) a printed notice posted in the *Herald* office which read: "You are nothing—the *Herald* is everything." For a rule of conduct to fit every case this is the best that could be devised, and the intelligent workman will see in it the mainspring of his effort, and interpret it in its intended sense. This same rule should be kept in mind by the salesman as he is the direct representative of The House, and in his hands rests its reputation.

Each sales manager has his own ideas, and places before his salesmen from time to time volumes of circular letters of advice and instruction. A few general remarks may, however, obviate the necessity of much such to the conscientious salesman, and it is hoped, if carefully noted, they may assist in making his work more satisfactory and successful to both himself and his employers.

The salesman should first remember that his value is gauged by net results, including not only such orders as are secured at once, but the general effect upon the future. The business is presumed to be perpetual, and often the work of the salesman will yield better value if directed to strengthen the position of his house for the future, than to securing small present orders.

As above noted, the impression created by the salesman's manner determines the opinion of his principals. It is presupposed that the House has an honorable record and a good standing; these must in no wise be abated by any act of a representative. It will be unnecessary to mention that the salesman, in dress, manner and habits should at all times be a gentleman, or what is better—a man. Correct habits while commendable on moral grounds, are imperative in business. Intemperance will not long be tolerated; profanity is a mark of ill breeding, while excess of any kind is sure to impair efficiency. The discriminating manager in these "strenuous days" has no use for any but those who are honest, reliable, thorough, earnest and undivided in allegiance. The degree to which these qualities are found usually determines the rate of advancement and responsibility.

Don't try to impress your customer with your superior knowledge. You are the seller. He is the buyer. Neither is subserviency nor timidity productive of good results. Show a willingness to listen and fully understand what he thinks he wants to purchase, and to assist him in getting it. Where your reason shows that he is making an unwise choice, you

can with tact, and without in any way suggesting that he is either ignorant or stubborn, show him the better way. Do this in such a way that your manner will impress him that your training and experience are better guides and that your suggestions emanate from a sincere desire to give him the best satisfaction.

Tact is a talent that should be continually cultivated, as it is the tactful man that is successful. A recent writer has said that it is superior to genius and I am not prepared to dispute the point. You can hardly name a phase of political, commercial or social life where the man of tact is not ahead. I have seen ability and brains relegated to the rear or kept in subordinate positions while the man with the hypnotic art forged ahead. Don't misunderstand me, without brains and ability no success is permanent, but with those for the charge and tact for the match, bull's-eyes are a sure thing. A recent number of the *Industrial Journal* contains a good essay on tact, read it.

If the salesman secures orders simply by the argument of lowest prices, then it matters little and he need read no further in this article. But if his house is handling or making a good line, it should be his strongest argument that there is no competition on price. If his wares are equal to those of other makers, they are of equal value, and in these days of combinations and gentlemen's agreements it becomes all the more important that the question of price be left out of any argument. Within my own experience I have seen two manufacturers attain to the highest rank by freely advertising a high price and a corresponding high quality. A failure on the part of their salesmen to secure the higher price was looked upon as a confession of failure and they were "allowed to resign."

At the risk of being called *passe*, I repeat what others have often said. Don't disparage competitors. It will take all your skill and ability to properly present your own line. Decrying the other fellow only advertises him, and if I found the salesmen of other people jumping on the company I now have the honor to represent, it would immediately cut down our advertising appropriation. You should be familiar with the points wherein your house considers its goods better than those of other makers, and if forced to compare, should honestly point out the advantages claimed. Even then avoid criticism or any inference of ignorance. Seek rather to bring your customer to look at the matter from your point of view. Make no statements of which you are not absolutely sure and which you do not yourself believe. Truth is ever convincing; the slightest untruth throws doubt upon the whole case. Many times has justice miscarried because some witness, in his enthusiasm, has drawn from his imagination for his facts.

Do not ever attempt to discuss a subject on which you are ignorant with the assurance of knowledge. Cultivate a knowledge of uses of goods you handle and ascertain the technical meaning of the peculiar language of the craft. Absence of such knowledge will inevitably lead to some incorrect use of a technical word and thus immediately convey the impression that you are not master of your business. Then confidence is gone and failure is sure to meet you. The correct and easy use of the terms of trade relating to the goods you handle will contribute largely to convey the idea that you know your business and your advice can be safely followed.

In the matter of expenses, I realize I am on disputed ground, but generally it is expected that these will be limited to what is legitimate, and be honestly stated in the voucher. Needlessly expensive hotels should be avoided, nor should you patronize any house to which you cannot without apology invite your customers. In the matter of incidentals, salesmen are often influenced by the fact that the house pays the bills. In the long run it would be better if they applied the golden rule and act as if they were themselves the payers.

As stated in the beginning, it is net results that count. The profit yielded, and the cost through the salesman of securing that profit, are factors which determine the length of service or rate of advancement. The house cannot take time always to analyze critically the expense account and to point out where it should be different. In most cases where unreasonable expenses or unsatisfactory returns continue, it is easier and more judicious to dispense with the salesman's services.

Finally, brethren, and this is my hobby, devote a reasonable amount of time to the study of the technical literature relating to your line, and to such as will give you a better insight into the source and reason, the intent and use of the goods you are handling. It is not enough to be familiar with the catalogue of the house. Learn of the materials entering into the composition, the origin, history and destiny of every piece, and familiarize yourself with the various processes necessary to make the harmonious whole.

In filling vacancies the salesman stands the best chance for promotion, if he earns it. More than any other employee he is the moulder of his own destiny and must alone be held responsible for success or failure.

ANTRIM, N. H.

F. A. SOUTHWICK.

### Sizes of Wire Cloth.

In referring to wire cloth for screening purposes the custom is to state the number of meshes per linear inch, but inasmuch as wire of various diameters is employed in making cloth of a certain number of meshes per linear inch, the character of the cloth cannot be determined unless the number of the wire from which it is woven is specified. It is important to specify the number of wire, because, for example, a 24-mesh screen woven with fine wire may have larger apertures than a 20-mesh screen woven with coarse wire. There used to be a good deal of confusion with respect to wire cloth owing to the different wire gauges employed by the different manufacturers. The difficulty has, however, been happily obviated during the last two years, the Wire Cloth Manufacturers' Association having, on March 7, 1899, adopted the Washburn & Moen, or Worcester, gauge as the standard of all iron or steel wire cloth and the old English gauge as the standard for all brass or copper wire cloth. These gauges are to be found in almost any of the engineers' pockets and from them the diameter of the apertures in a wire cloth of any mesh can be calculated readily if the number of the wire from which it is woven be specified. The mesh in wire cloth is always the number of openings in a linear inch measuring from center to center of wire. A linear inch will comprise, therefore, the same number of apertures and wires. Multiplying the diameter of a single wire in decimals of an inch by the number of wires in a linear inch, subtracting the product from unity and dividing the remainder by the number of meshes per linear inch, will give the diameter of each aperture in decimals of an inch.—*American Engineering*.

### He Wasn't That Sort of a Boy.

Mother—What! Have you been fighting again, Johnnie? Good little boys don't fight.

Johnnie—Yes, I know that. I thought he was a good little boy, but after I hit him once I found he wasn't.—*Ex.*

### Knew His Boy.

Benson—Look here, that red-headed boy of yours threw a big stone at me just now, and barely missed me!

Proud Father—You say he missed you?

Benson (angrily)—You heard what I said, didn't you?

Proud Father—Then it couldn't have been my boy.—*Tit-Bits*.

Suburbanite—You've got a new baby at your house I hear!

Townite—Great Scott! can you hear it away out there in the suburbs?—*Ex.*

## CONSULAR COMMERCIAL COMMENTS.

### METAL WORKERS' SCHOOL IN SAXONY.

An exhibit of the work done by pupils of the Metal Workers' School at Rosswein has been recently held in Freiburg, which showed the thoroughness of the instruction. The school has an average of sixty to seventy students. These pupils are chiefly from Prussia and Saxony, but all sections of Germany are represented, and even Sweden and Austria. One of the conditions of admission is that the pupil should have had three years' practical experience.

Many of the states of Germany are liberally aiding the school and granting free scholarships to worthy young men.

The school is provided with a technical library, reading and reference room, and has a large supply of scientific apparatus, electro-motors, batteries, etc., and many practical models of buildings, machines, etc. Excursions are frequently made by the pupils to the large factories and mines of importance in the neighborhood. The course at the school lasts from one and one-half to two years and embraces four departments—building, fine arts, machines and electro-technics.

A great deal of attention is given to drawing. The student is taught to create, and, in order to stimulate the inventive faculties, the German patent office sends the institution, free of charge, copies of patents pertaining to mechanical, metal and electric apparatus.

In addition to the special branches in metal work, etc., attention is also given to physics, chemistry, algebra, geometry, bookkeeping and German language lessons.

The tuition fee for the semester, or half year, is 100 marks (\$23.80) for citizens of the German Empire and 200 marks (\$47.60) for foreigners, and an additional fee of 25 marks (for foreigners, 50 marks, or \$11.90) for the use of apparatus, machines and material.

The city of Rosswein has about 8,000 inhabitants and is situated on the main railroad line between Leipzig and Dresden.

E. THEOPHILUS LIEFELD, Consul.

Freiburg, June 26, 1901.

### TRADE OPPORTUNITIES IN THE PERSIAN GULF.

Consul Schumann, of Mainz, June 27, 1901, says that according to a German trade journal, the following articles find a ready sale in the ports of the Persian Gulf:

Accordions, needles, photograph albums, matches, gold-plated steel jewelry, tobacco and cigarette cases, music boxes, wax candles, buttons, brushes, table cutlery, calico, canes, whips, shawls and kerchiefs, cement, canned goods, cottons, woolen and cotton blankets, glassware, leather, copper, cloth, blue and red ink, sponges, towels, tin, fans, crockery, artificial flowers, silks, gold lace, gloves, gauze, olive oil, lamps and lanterns, iron bedsteads, eye glasses, sewing machines, furniture, looking-glasses, watches and alarm clocks, handkerchiefs, coffee grinders, writing materials, umbrellas, perfumery, wax pearls, decorated porcelain, pharmaceutical preparations, ribbons, salt fish, sardines, butter, soap, sugar, linen, velvet and velveteen, and wines.

### FRENCH OPENING FOR SPRAYING MACHINES.

Referring to my report on the decrease of olive culture in southern France, I would note that propositions for parliamentary aid for the olive crops have been made by the senator from Nice. He says that up to 1860, this was the most important product of these regions, and the crops were worth from 10,000,000 to 20,000,000 francs (\$2,000,000 to \$4,000,000 in round numbers). A gradual diminution has since occurred, until in 1899—a very bad year, it is true—the value

of the crop was but 150,000 francs (about \$30,000). The cause has been the ravages of the olive fly and the black blight. The senator complains that no concerted measures have been taken to combat the destruction of the olive plantations, and states that one obstacle is the high price of spraying machines, capable of spraying with economy of liquid to a height of from 30 to 45 feet.

I think I have seen advertisements of American spraying machines which are intended to reach the highest fruit trees, which cost a very moderate sum. If manufacturers of such articles will send me their catalogues and prices of all such appliances, I shall have them forwarded to those interested, with a view to introducing them into this market.

HAROLD S. VAN BUREN, Consul.

NICE, June 18, 1901.

### Nicholson File Co.'s Latest Acquisition.

By the tenor of the following announcements, it will be seen The Nicholson File Co. have increased the number of brands of Files and Rasps controlled by them to nine, increasing their present extensive facilities as well:

Office of

THE J. BARTON SMITH CO.,

Fourth and Somerset Streets,

Philadelphia, Pennsylvania, U. S. A.

Having sold to the Nicholson File Co., of Providence, R. I., our entire business so far as the manufacturing of Files and Rasps is concerned, including all machinery, tools, stock of goods, patents and good-will, we desire to announce that we shall discontinue entirely the manufacture and sale of these goods.

Payment for invoices prior to August 1st, 1901, should be made to the J. Barton Smith Co., Philadelphia, Pa.

We extend to all our customers our thanks for the patronage which they have accorded us, and assure them that they cannot better serve their own interests than by transferring to the Nicholson File Co. the business with which they have favored us. Respectfully yours,

THE J. BARTON SMITH CO.,

CRAWFORD MILLER, President.

August 1st, 1901.

Office of

NICHOLSON FILE CO.,

Providence, R. I., U. S. A.

We hereby announce that we have purchased of The J. Barton Smith Co., Fourth and Somerset Streets, Philadelphia, Pa., the File and Rasp manufacturing business heretofore carried on by them in that city, including all of the machinery, tools, stock of goods, patents and good will of that company.

Payment should be made to the J. Barton Smith Co., Philadelphia, Pa., for all charges by them prior to August 1st, 1901. Remittances for all bills of Files and Rasps rendered on and after August 1st, 1901, as well as all orders, should be sent direct to the Nicholson File Co., Providence, R. I.

We solicit the continued patronage of all those who have handled the File and Rasp products of the J. Barton Smith Co., assuring them that the quality of these goods will be maintained in every particular, and that their business shall receive our prompt, careful and courteous attention. Yours respectfully,

NICHOLSON FILE CO.,

SAMUEL M. NICHOLSON, President.

August 1, 1901.

## PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

## Patents Expired July 22, 1901.

- 302,227. WAGON-JACK, Louis Barrette, Crookston, Minn.  
 302,236. SASH-FASTENER, David H. Butler, Cane Valley, Ky.  
 302,267. TINNERS' TONGS, Wm. A. List, Wheeling, W. Va.  
 302,292. TUBULAR DRILL, A. Soderstrom, Stockholm, Sweden.  
 302,308. SCREW-DRIVER, J. S. Works, Abbot, Me., assignor to C. A. Shaw, Boston, Mass.  
 302,354. SHEEP-SHEARS, S. D. Paxton, D. E. Paxton and A. Mahurin, Ukiah, Cal.  
 302,391. CASTER, J. B. Fischer, Hamilton, Ohio.

## PATENTS ISSUED JULY 23, 1901.

- 678,867. MOP-WRINGER, L. H. Evans, Des Moines, Iowa, assignor to W. M. Randleman, same place.  
 678,889. DOOR-CHECK, G. W. Mallory, Guilds, Canada.  
 678,899. LOCK, D. B. Ozment, Gainesville, Tex., assignor of two-thirds to J. M. Lindsay and G. W. Lindsay, same place.  
 678,956. LOCK, O. Katzenberger, San Antonio, Tex., assignor of one-half to H. Uhl, same place.  
 678,959 and 678,960. PIPE-WRENCH, J. P. Lavigne and A. W. Johnson, New Haven, Conn., assignors to Yale Motor Co., same place.  
 679,020. LAWN MOWER, H. Garrett, Pendleton, Ore.  
 679,183. ICE-TONGS, H. B. McKee, Syracuse, N. Y.  
 679,266. SAD-IRON, T. G. Edwards, Philadelphia, Pa.

## TRADE MARKS.

- 36,813. HAMMERS, TROWELS, LEVERS, PLUMB-RULES, JOINTING RULES AND BROAD CHISELS, J. F. Sullivan, Hartford, Conn. The letters and character "B. & M. I. U." and the representation of a hammer, trowel and plumb-rule disposed crosswise of each other.

## PATENTS EXPIRED JULY 29, 1901.

- 302,542. NOZZLE FOR HOSE AND DISCHARGE PIPES, M. Clemmens, New York, N. Y., assignor to J. Bresnan, same place.  
 302,582. PNEUMATIC DOOR-CHECK, G. S. Perkins, Hartford, Conn.  
 302,596. AUGER-BIT, Henry L. Shaler, Deep River, Conn.  
 302,598. SCREW-JACK, Wm. P. Smith, New Orleans, La.  
 302,638. WEATHER-BOARD GAUGE, J. T. Shank, Springfield, Mo., assignor of one-half to A. M. Lapham, same place.  
 302,659. RATCHET-WRENCH, Walter J. Hunter, Greensburg, Pa.

## PATENTS ISSUED JULY 30, 1901.

- 679,295. MEASURING FAUCET, Orvin H. Chandler, Clinton, S. C.  
 679,345. OIL-CAN, Samuel G. Stafford, Bellevue, Pa.  
 679,383. LAWN-SPRINKLER, Louis Horvath, Los Angeles, Cal.  
 679,385. COUPLING-HOOK FOR EXTENSION LADDERS, H. Klemme and E. Augustien, Sheboygan, Wis.  
 679,424. PLANE, Ludwig Kemline, Pinole, Cal.  
 679,464. SASH LOCK, Henry L. Loomis, Bloomington, Ill.  
 679,495. BOX-OPENING TOOL, A. C. Bower, Newkirk, Okla., assignor to H. E. Farnsworth, same place.  
 679,702. SPOKESHAVE, W. D. Murray, Portland, Me., assignor of one-half to Walter Ackroyd, same place.

## Fish Hooks.

A conservative estimate places the number of common fish hooks sold every year in the vicinity of Cleveland at 300,000. Probably over twice that number are sold through Cleveland jobbers, but the local disciples of Izaak Walton use enough to raise a stare from the casual investigator. The discovery that such a number of hooks is annually used lends color to the stories of the "biggest fish I ever saw got away with my hook." One dealer stated that his firm alone sold over 200,000 fish hooks annually. Many of them are shipped long distances.

"Curiously enough," said the dealer, "America imports most of her fish hooks from England. They all come from the village of Ridditch, and a manufacturer of the name of

Allcox turns out the best of them. They are all hand made, and the little children of Ridditch file and polish our fish hooks. There is now one American company located at Akron, Ohio., the Enterprise Mfg. Co., that turned out millions of hooks last year."

Fish hooks are made in a bewildering variety of styles and sizes. The quality is determined by the twist and shape of the hook. The wire of which they are made varies with the size. The dealer exhibited one size that seemed too small for practical use on any fish. This is the hook that has supplanted the bent pin in the favor of the small boy who pursues the elusive minnow. Two hooks were exhibited that figure in ocean fishing. One was six inches in length and seemed enormous until the last size appeared on the counter. This hook was eighteen inches in length, with a shaft as large as a finger and a swivel eye in which a chain is run. The dealer named several fish that this instrument was designed for. To the uninitiated, it seemed intended for sperm whales. The 300,000 hooks used by the local fishermen are of much smaller size and common quality.—*Cleveland Plain Dealer*.

## Mica in Assorted Packages.

Eugene Munsell & Co., 218 Water Street, New York, have been identified with the Mica business of the country as Miners, Importers and Wholesale dealers, from a period of time which the Hardware veteran recalls with difficulty, dating back as it does to 1840. In order to meet every possible requirement for the stove and Hardware trade, they carry a complete stock of all sizes of Mica in two qualities, as follows:

North Carolina Mica: This is a selected, clear and lustrous Mica of the highest grade, guaranteed equal to any in the market.

Wyoming Mica: This is not perfectly clear, but in all other respects, is equal to the preceding, and has an established reputation.

The two grades are put up for the convenience of the trade in assorted packages. This enables the dealer at a limited outlay to carry a small stock of a variety of sizes. This fact is advertised on another page in this issue of *Hardware* at moderate prices, and which they agree to deliver upon demand "free of transportation charges, to any part of the United States."

## Discoveries through Accidents.

Accident plays quite a considerable part in the discovery of mineral deposits, according to a magazine writer. Many examples are on record. The Freiburg mines, in Saxony, were discovered by a soldier whose horse picked up a stone in his shoe; this stone was heavy lead ore. Copper was found in South Australia from examination of green mineral in burrowings of the wombat. Diamonds in South Africa and gold in California were found by chance. A geologist discovered phosphate of lime in France by analyzing sand that was used to give a violet color to bricks. Any mineral of a peculiar appearance in a district should be carefully examined. For years the great Comstock lode in Nevada was worked for gold, and the rich yellow sand, which eventually turned out to be silver chloride, was being thrown away. The Broken Hill silver mine, it is believed, was first pegged out for tin. The porous pumice ore of Mount Morgan was sold for cleaning hearths before its value became known.

## Spools and Thread.

The spool mills use about 82,000 cords, or 16,000,000 feet, of birch annually, turning out 800,000,000 spools, each spool large enough to carry 200 yards of thread. The amount of thread that could be wound upon these 800,000,000 spools would reach 3,600 times around the world at the equator and leave a little for mending.

## HINTS TO HARDWARE DEALERS. II.

### IN SHOWING UP AND RETAILING SEWING MACHINES.

In my previous article I dwelt but briefly on the necessity of knowing your machine in "Retailing and Showing It Up." I will now outline more fully the points brought out in my former article.

The first thing you have to do in retailing a sewing machine is to make the party believe she wants a sewing machine and cannot get along without one. In this way you get the party interested, and by proper tact, you get all the information you desire as to what particular features she desires in a sewing machine. Let your ideal be to sell machines to people who do not want them, provided they are able to pay for them. It is no trouble and requires no salesmanship to sell machines to people who want them and are prepared to buy. Should you fail once on a prospective customer, you must not give him up, but remember him and try again as often as opportunity and good taste will permit, and you will be sure to catch him in the right mood at last.

In showing up the machine, systematize your work as much as possible so as to do it in as short a time as possible and still satisfy and please your customer. In taking the machine from the crate, wipe it off carefully and oil every part necessary and see that all the attachments and accessories are with the machine. In showing up, first dwell upon the mechanical construction of the machine, its hardened parts and durability, and how lost motion can be taken up in a few moments and insure the machine lasting a life time. Give a brief but comprehensive outline of the many desirable features embodied in the machine. State in talk forcible and impressive of its durability, its ease of operation and light running qualities. Having given the customer a general talk of the many durable qualities embodied only in your machine, I would now proceed to thread it up and do some plain sewing, and while sewing on the machine, keep up the thread of conversation and bring out such further points as you desire to make. I would not use the various attachments unless called upon specially to do so. However, should a customer desire to know about the work of the attachments, I would proceed as follows: I begin with the hemmer. I would make a hem and sew on lace edging at the same time. In hemming and sewing on lace at the same time, the trouble with beginners is that they let the lace ride away from the hem. To keep it on the hem, let the hem get a good start; then pass the lace through the guide slot, and proceed as in ordinary hemming, keeping the lace even with the hem. Next the ruffles—sewing on a band and gathering at the same time. Then show how tucks are made and the various widths of hems. In using the tucker, and to do nice, even work and make tucks of uniform width, care should be taken not to press too hard on the goods with the left hand. There should be no pressure on the goods, but hold the folded edge close against the guide, keeping the right hand on a straight line with the needle.

In order for the dealer to become familiar with the use of the attachments, I would suggest that you read over carefully the book of instructions that accompany each machine. Clear and lucid directions are given on the use of the various attachments, and with a little practice and some patience, the dealer will soon become a fair, if not expert, operator. Every dealer should be as proficient as his competitor in business, and I am of the opinion that many more profitable sales might be made if the dealers would show and demonstrate how valuable the use of the attachments is. There is no

question but that it pays the dealer to know and be able to operate his machine, for if a lady understands how to use her machine and its attachments, she will aid the dealer to sell many more.

For that class of dealers who have not the time nor desire to learn the use of the attachments, the following line of argument may be useful: If a customer should want to know about the attachment work, tell her frankly that you are no operator, but that there is no reason why your machine in the hands of any customer should not sew as well as those sold almost entirely on their ability to do fancy work. Tell her that you guarantee your machine to do family sewing of any and all kinds; that your machine is always ready to do that perfectly on any and every kind of goods. If this does not satisfy your customer, ask her to take a seat at the machine. Instruct her to thread it properly, also how to thread and replace the shuttle, how to regulate the tensions and to shorten and lengthen the stitch. Tell her that you have just purchased a line of these popular and light-running machines, and this line being new to you, you have not yet mastered it as thoroughly as you would like. It is probable that your customer will know more about the machine in a few minutes' trial than you could tell her in an hour. All this time use your best endeavor to inspire her with confidence in the machine. Compliment her on her ability to operate it successfully, so that when you get through, she is satisfied that she can successfully manage it and do the work she requires of it.

In retailing sewing machines, it is well to remember that while the need of sewing machines exists, it has to be aroused. Therefore, the need of constantly keeping your machine before your customers. I have read somewhere that the important thing in selling at retail was to "get the right line of goods and then make a dom fuss about them." First, get the right kind of machines, at the right price, and "then make a dom fuss about it" and sales will surely follow. Aim to handle as reputable machines as you can secure, and control them in your territory as far as you can. Do not, however, seek to work too large a field. First, work your home territory and do a compact business. If you will handle a good machine and treat your customers honestly and fairly, new trade will constantly come to you because of the good influence worked by your satisfied customers. If you will constantly keep your machines before your customers and do it often and long enough, the business must surely come. The successful dealer of the future will be the one who will talk about his machine forcibly, clearly, honestly, and when he talks about his machine, he will tell something about it. If they are good machines, he will not only say so, but say why. If they are the best and better than the machine handled by his competitor—the same.

Take plenty of time to tell your story and describe the machine fully. If you will talk up your machine in the right spirit and manner, you will surely get your proportion of the trade. Try to make the machine interesting and desirable to your customer. Be different from the others in your line.

As the dealer in exclusive styles is becoming obsolete, I would advise you to study the fine points of your trade. By the fine points I mean those little preferences that a customer sometimes shows for a particular style, or quality of goods, or some personal peculiarity or predilection he may have upon this or that subject. I might perhaps better call it the "human nature" side of the business. Every man has

his weaknesses. We are all cranks, more or less, upon certain topics, whether these relate to business, politics, or other affairs of life.

The most successful dealer is the one, who, without apparent effort, ascertains what the particular hobby of his customer is, and then proceeds to make most adroit use of this information, either by pretended enthusiasm upon the same subject, or by actions which indicate plainly where his sympathies lie. Whatever the hobby, it is always humored. As in every mercantile pursuit, the sewing machine dealer must study to please, even in the little, inconsequential things of life, for many a man regards these as of more importance than the larger ones, and is often approachable only through the ever open door of his pet theory. Therefore, study the idiosyncrasies of your trade—the little things that go to make up this or that individuality. Be suave, diplomatic, resourceful. Never let a customer's weakness upon a given subject nettle you; rather turn it to good account in the manner described. The result cannot be harmful, but will almost invariably redound to your benefit, and aid in that most desirable of achievements—a permanent and increasing business.

### United States Edge Tool Co.

The United States Edge Tool Co., Cattaraugus, N. Y., whose advertisement appears in another column, is an old established company of long experience and for many years have made high grade hand-made axes for special customers. They have recently added labor-saving machinery which will enable them to turn out more goods than in the past. It is

claimed that their capacity is about 50,000 per month, and they keep a large stock of manufactured goods on hand so they can make prompt shipments. They are known as manufacturers of a strictly high grade hand-made axe for the very best trade, being made from the best steel and tempered by hand.

### A Valuable Pamphlet.

The Industrial Department of the Lackawanna Railroad, in charge of William B. Hunter, and having its headquarters at 26 Exchange Place, New York City, has just issued a 300-page booklet under the caption, "Industrial Opportunities." This work treats of every town on the line, showing its population, its distance from New York and from Buffalo, its railroad facilities, its leading industries, its leading shipments, its rate of taxation, cost of labor, rent of houses, how lighted, whether it has water works, principal power, approximate cost of steam, coal, approximate value of lands and describing vacant lands or factories available for manufacturing purposes. In the introduction the aim of the Lackawanna Railroad is set forth as follows:

First. To give assistance to manufacturers in the selection of the most favorable site for their industrial enterprises.

Second. To help cities, towns and villages along the line to expand and broaden through the location of new industries.

Advantages of this line in the mining regions of New Jersey and Pennsylvania and the agricultural districts in the State of New York are fully set forth. Copies of the book will be forwarded on application to the Industrial Department.

### Gasoline.

Gasoline is a product of the distillation of crude petroleum, and until a comparatively recent date had but little commercial value. Within, however, the short period of half a decade, this by-product has assumed an importance in the domestic economics that can hardly be estimated. During this period it had to meet, as is ever the case with important innovations, the opposition of ignorance, prejudice and over-conservatism, which was strengthened in no slight degree by the policy of unscrupulous and irresponsible manufacturers, who, in their eagerness to derive profits from so attractive a field of operations, flooded the market with a variety of cheap and inferior devices for its use, which proved not only worthless, but in many cases dangerous to handle.

American ingenuity and enterprise have not only successfully overcome those obstacles, but have made the use of gasoline practically revolutionize the important fields of power, heat and light. Reputable manufacturers, recognizing the tremendous possibilities of this commodity, are placing on the market approved devices made in connection with the highest standard of mechanical and structural perfection.

Gasoline motors, stoves and lamps are no longer to be relegated to the ranks of experiments, but must be recognized as most important elements in the economics of the age.

No better evidence of this can be had than in the announcement of the Welsbach Company, contained on another page of this number. That a Company having their standing and reputation should enter this field on the scale their announcement indicates, leaves little to be said as to the importance and advancement of this new element in progressive science.

### Output of Wire Rods and Wire Nails

According to the *Bulletin* of the American Iron and Steel Association, the production of iron and steel wire rods in the United States in 1900 amounted to 846,291 gross tons, against 1,036,398 tons in 1899 and 1,071,683 tons in 1898, showing a decrease of 190,107 tons, or over 18 per cent., in 1900, as compared with 1899. Of the total production in 1900, 1,929 tons were iron rods and 844,362 tons were steel. Pennsylvania made the largest quantity of wire rods in 1900, with Illinois second, Ohio third and Massachusetts fourth. Six other States, Connecticut, New York, New Jersey, Kentucky, Alabama and Indiana, also rolled wire rods in 1900. The production of steel wire nails in the United States in 1900 amounted to 7,233,979 kegs of 100 pounds, as compared with 7,618,130 kegs in 1899, a decrease of 384,151 kegs, or over 5 per cent. In 1898 the production amounted to 7,418,475 kegs, in 1897 to 8,997,245 kegs, in 1896 to 4,719,860 kegs and in 1895 to 5,841,403 kegs. The wire nails produced in 1900 were manufactured by fifty-six works, three less than in 1899. The following table gives the production of wire nails in 1899 and 1900 in kegs of 100 pounds:

	1899.	1900.
Massachusetts, Rhode Island, Conn.....	176,877	212,584
New York and New Jersey.....	49,603	63,466
Pennsylvania .....	2,905,211	2,158,399
Maryland, W. Va., Alabama and Ohio..	2,154,823	2,516,391
Indiana and Illinois.....	2,184,662	2,195,672
Michigan, Wisconsin, Kansas, Washington and California.....	146,954	87,467
Totals .....	7,618,130	7,233,979

### A Little-Known Postal Rule.

D. C. Whitman complained to the post-office authorities that his mail was delayed by reason of going to another D. C. Whitman in the city, and he invoked a curious law, which is to the effect that where two persons of the same name and initials reside in a city, the mail carriers must give the oldest resident first pick of the mail. In this instance, one Mr. Whitman has resided in Kansas City fifteen years, but the other Mr. Whitman has been here twice as long so that hereafter he will get first call on the correspondence.—*Kansas City Journal*.

### East Tenn. Retail Hardware Association.

The thirteenth semi-annual meeting of the East Tennessee Retail Hardware and Implement Dealers' Association convened at the Imperial Hotel, Knoxville, Tenn., Thursday evening, July 19th, and was continued during the day following. About twenty leading retail merchants representing the principal towns throughout this section were in attendance. The meeting was set to begin in the afternoon, but the members did not arrive until the night trains.

President James May, of Sweetwater, called the body to order, and delivered the opening address, setting forth the objects of the association and the benefits to be derived from it. This was responded to by J. W. Bayless, of Athens.

The first topic under discussion was "Our Relation to the Jobbers," introduced by J. H. McCaslin, of Sweetwater. J. A. T. Bacon, of Bristol, spoke on "Credit and Best Methods of Handling." "The Future of the Trusts" was dwelt upon by President Bayless and Miller Lea, of Rogersville. The last topic of the night session was "How Best to Handle and Buy Fertilizers," led by H. C. Cole, of Chilhowee, Va.

The meeting was resumed at 9 o'clock Friday morning. The topics for this session were:

Your Machinery, Contracts, Selling and Advertising.  
Your Idea of the Vehicle Business, Terms, Profit, Grades.  
Guaranteed Goods and How Best to Handle Them.  
Your Freight Rates, and How to Secure Better Ones.  
Freights, Storage, Insurance, Rents and Expenses.  
Question Box.

After this session the association adjourned to meet in Knoxville in January, 1902, this city being the permanent meeting place, on account of its central location.

The next election of officers will occur in January, they being elected annually. W. A. Jones, of Greeneville, is secretary and treasurer of the association.—Knoxville (Tenn.) *Sentinel*.

INTERNATIONAL TRADE MARK PROTECTIVE CO., 320 Broadway, New York, are distributing a valuable lot of booklets, leaflets and folders devoted to their special line of information for which this well-known company is the fountain head, having reference to trade marks, names and labels, the value of registration of the same, and the loss that has been constantly suffered by owners thereof from lack of proper attention being given to this matter. These all possess considerable interest to those who have trade marks of their own to protect, and as the several booklets are full of the necessary information by which they may be provided, we should urge the forwarding of their name and address for all such matter to be gratuitously sent them by this company.

It is stated that the Norwegian Government has awarded the entire contract for steel rails for the state railways this year, 11,800 tons, to the Pennsylvania and Maryland Steel companies. The contract last year was awarded to the United States and England, each taking half.

## A Dip of Paint

isn't enough to show whether a paint is good or bad. Time is the test that brings out the truth of paint claims.

If a paint covers well on the side of a house; if it brushes out easily and smoothly; if it wears well and withstands the elements, it's good paint.

But you can't ask your customers to make a test of that kind and run the risk of their finding the paint worthless. You'd lose their trade and their influence.

The thing to do is to sell them a paint that others have tested in this way for years and that has proved itself invariably good.

**THE SHERWIN-WILLIAMS PAINT**  
is such a paint.

### Bridgeport Mfg. Co.'s Specialties.

Bridgeport Mfg. Co., Bridgeport, Conn., have recently issued a comprehensive catalogue of their Hardware specialties to which they invite the attention of the trade. Among the contents, we notice their improved Jumbo Nail Puller, which is provided with jaws and shank forged from the finest quality of steel, thoroughly hardened and oil-tempered, the jaws being held in position by an enclosed steel spring. It is made in two sizes, 15 and 18 inch. The "Dunwell" Gas Plyer is forged from sheet cast steel, has milled teeth, tempered jaws and is bright finish. The Hercules Cutting Nippers are forged from a fine quality of cast sheet steel, carefully tempered and of tested quality. It is provided with a compound lever that insures easy cutting. The Rosedale Screw Driver, one of the many kinds made by them, is highly polished and tempered, has fine cast steel blade, and rosewood finished handle. It is provided with a double wing on shank, to prevent any turning in the handle in use. The "Waldorf" Steel Laid Straight Trimmers are made in full nickel-plate or with nickel-plated blades and enameled handles. These popular shears are made from the finest quality of steel faces welded to malleable backs. Their "Modock" Shear is provided with an improved brass bolt and nut, spring brass washer, japanned handles, nickel-plated blades, each shear being put up in an anti-rust water-proof pocket. The spring brass washer always holds the blades in a proper position to work easily, and make a clean cut. Among their salable specialties now popular with the trade may be mentioned the Eureka Combination Plyer, Standard Ticket Punch, Keyes' Solid Steel Plyers, Wire Cutters and Nippers. The company have greatly improved the style and quality of their leading specialties, have made no advances in price, but some reductions. With increased facilities and the possession of a good factory stock, they are prepared to ship promptly throughout the season.

## RECENT TRADE PUBLICATIONS.

UNITED STATES WIRE MAT CO., Decatur, Ill. Booklet catalogue, envelope size, 14 pages. Under the title of "What Mats Should Do and What THE Best Mat Does Do," they give a history of the wire mat business, enumerating the various styles in an extremely interesting manner, illustrating what they say with excellent cuts, and finishing with a catalogue and price list of their own production, the concluding page showing that a large number of the leading jobbers throughout the United States are identified with the distribution of their production.

SEARLS MFG. CO., Newark, N. J. Pamphlet catalogue, 42 pages, covering the line of bath room and household specialties manufactured by this well-known concern. Embraced in its contents is a large and very desirable line of these goods, of new and improved patterns, very much extended in scope and variety, and well deserving of the attention of the Hardware trade. Most of the patterns are perfectly plain. They are manufactured from brass heavily plated with nickel, which they have decided to be the most suitable finish for this class of goods, it being so easily cleansed and brightened. When desired they are also made from polished brass. They state in the catalogue that they now manufacture 163 patterns, and for the convenience of dealers to enable them to show these bath room articles to the best advantage, they will furnish a sample line of the pieces, handsomely mounted on a velvet-covered board, with oak mouldings, charging only for the samples, and making no charge for the mounting.

HOLLANDS MFG. CO., Erie, Pa., 1901 catalogue Machinists' and Plumbers' Tools, Natural Gas Burners, etc. Pamphlet catalogue of 48 pages, showing the popular line of Vises made by this well-known company, including Machinists' Vises, with stationary and swivel bases, with Swivel Jaw, or with and without offset, Self-Adjusting Taper Jaws, Detachable V-jaws, Filers' Vises. In this assortment of special vises will be found Pattern Makers' Vises, with detachable rubber, copper or lead jaws; and Star Bicycle Vises. Included in their assortment will be noticed Combination Pipe Vises, both light and heavy, together with Malleable Pipe Vises (Side Issue); Malleable Hinged Vises, Polished Tubing Vises and Pipe Vises with patented roller jaws. A line of goods similar to these, marketed under the trade mark of "Key-stone," is also illustrated and described in this catalogue, which includes in its contents a line of Pipe Wrenches and Pipe Cutters, covering all the several varieties demanded by the wants of the trade. Altogether it is a very desirable catalogue for the Hardwareman to add to his collection. It should be sent for.

THE STANLEY WORKS, New Britain, Conn., have recently published an attractive booklet devoted entirely to the exploiting of the Ball-Bearing Hinges made by this well-known company. The contents are made doubly attractive by a number of artistic illustrations, in which an up-to-date lady drummer is supposed to be doing the talking that is embodied in the accompanying pages. It is needless to say the reading matter is of a character that impels perusal, and if the object of publishing an artistic brochure of this kind is to obtain readers, it is certainly attained by this method of advertising. Included in the illustrations given in the booklet, is shown the Milwaukee Public Library and Museum, and the Park Row office building, New York, both of which were equipped throughout with the Stanley Ball-Bearing Hinges, and fur-

nish in each case an excellent object lesson of their undoubted utility. Altogether the publication is one of an extremely artistic character, and reflects credit on the advertising department of this well-known company.

RUSSELL & ERWIN MFG. CO., New Britain, Conn., and 43 Chambers Street, New York. Envelope size booklet of Builders' and other Hardware, consisting of 30 pages, handsomely printed on excellent paper, with a very attractive cover, with the title and design "Money Makers." The contents give the leading styles of inside sets to which they desire to call the attention of the trade, together with the artistic Hardware designed to trim with the same. Included in the contents are wrought steel rim knob locks, Century ornamented rim locks, rim night latches, mortise locks, together with door checks, store door handles, transom lifters, axle pulleys, etc. It is a very perfect little booklet that is undoubtedly designed for wide distribution, and will be welcomed by the trade.

LISK MFG. CO., Canandaigua, N. Y. Twelfth annual illustrated catalogue for 1901 of the Lisk Patent Anti-Rusting Tinware manufactured by them. This is a pamphlet catalogue of 128 pages, printed on superior coated paper, finely illustrated throughout with wood cuts showing every possible variety, size and style of the goods produced by this company. The company state the line is much larger and more complete than heretofore, embracing in every detail the same essential features that have made the word Lisk stand for a line of anti-rusting tinware which is warranted perfect in every respect and absolutely rust-proof. The extensive works form a frontispiece to the catalogue, giving evidence of the large establishment now devoted to the manufacture of these goods, and on one of the early pages is shown very handsomely printed in colors their guarantee certificate which is given to every dealer handling these goods, the guarantee being that "should any of the goods be returned rusted at any time, we guarantee to replace each and every piece with new goods free of charge." Dealers handling this class of goods would be wise did they add this catalogue to their library.

UNION HARDWARE CO., Torrington, Conn., New York office in charge of Tower & Lyon, 95 Chambers Street. 1901 catalogue of Ice Skates, covering their large and popular line so well known to the Hardware trade. While the company in the new catalogue display the same general line that they have shown in past seasons, they have added some entirely new high-grade goods, possessing special features. They show a new "Flanged Blade," which is displayed on page 11, and which they apply to many numbers of skates in the catalogue, presenting as it does an extremely fine appearance. Its construction gives great strength, while at the same time reducing the weight of metal, making it an extremely light skate. It also gives a broad tread on the bottom, which by making the skate easier to stand on, reduces the strain on ankles and muscles. They show a number of patterns in "Screw Clamp" fastenings, new "Lock Lever Club" for ladies, new "Swedoh" Racer, and also the "Extension Bob" skate for children. In a separate catalogue issued at the same time all their various styles of Hockey Skates are shown, which are of the latest design, finest finish, and of superior workmanship. The company call attention to the fact that, while extremely light in weight, the superior quality of material used guarantees their strength.

## NEW GOODS AND SPECIALTIES.

### Improved Automatic Blind Hinge and Fast.

R. P. Whipple & Co., 293 Main Street, Springfield, Mass., have recently placed on the market an improved Automatic Blind Hinge and Fast combined. The hinge, which is here illustrated, is very simple and strong and easily attached to the blind and house. It is claimed by the manufacturers that this is a complete set of blind fixtures in itself, no hooks being required to hold the blind either open or closed, and it will not slam, rattle or blow off. The construction of the hinge

IMPROVED AUTOMATIC BLIND HINGE AND FAST.

displays considerable inventive ability. The barrel and pawl are made of the best malleable iron. The plunger is constructed from wrought iron and is flat in place of being round (like the old-style hinge) which gives a better bearing for the pawl to work on. Between the barrel and pawl is a hard brass washer that will not rust, grate nor grind like a steel washer when the paint rubs off. Inside of the barrel is an oil-tempered steel spring. This spring being enclosed cannot be obstructed with paint, and will not rust, as it is not exposed to the weather. Taking quality and price into consideration, it is claimed to possess selling merits that place it in advance of the old-style hinges now prominent in the market. The manufacturers will be pleased to furnish circulars giving further information upon the request for prices.

### Brown & Sharpe's New Screw-Thread Gauge.

Brown & Sharpe Mfg. Co., Providence, R. I., are placing on the market an improved Screw-Thread Gauge, which has many advantages over the round gauge, which may readily be seen by comparing the two. The tool-setting gauge fur-

BROWN & SHARPE'S NEW SCREW-THREAD GAUGE.

nished with the old style gauge is done away with, and a new feature added in the slot at one end, having an included angle of 29°. Thus the workman can gauge the angle of the tool irrespective of the pitch. The shape of the new tool is somewhat more convenient than the old style, and three additional pitches are cut in the gauge, viz.: 1½, 1¼ and 2½. This

gauge is new in design and furnishes a correct standard to which tools can be ground to cut threads of a uniform angle to take the place of square threads. The thread is the same depth as the square threads, but as the sides are at an inclination of 14½ degrees (29 degrees including angle), this form of thread is stronger, and is generally adapted for cutting worms. The gauge is made of the best steel, tempered, adjusted and all angles accurately tested after hardening.

### Crescent Safety Razor.

The Southington Cutlery Co., Southington, Conn., and 98 Chambers Street, New York, are placing upon the market at the present time the Crescent Safety Razor, which is one of their latest specialties. We illustrate the several parts of this razor in the course of this article. Fig. 1 represents the actual size of the razor when it is ready for use, with the extra section that accompanies the same in order to hold the

FIG. 1.—CRESCENT SAFETY RAZOR, ACTUAL SIZE.

blade when stopping. Although not necessary, this blade holder, if desired, may be joined to the regular handle in order to give a greater degree of leverage in stopping. The company refer to the construction of this razor as being exceedingly simple, effective and one of the most perfect articles of their production. It contains all of the strong points of

FIG. 2.

the other makes. It can be easily changed, the blade being removed by unscrewing the handle. Every blade is of the standard size, and can be used with any holder. Some makes on the market make it essential when buying an extra blade to return the holder that it may be properly adjusted. In the Crescent every blade is easily adjusted by a quarter turn of the handle and sliding the blade forward the required dis-

tance, and then screwing it up again. The blade is made of the best cutlery steel, and the guard of nickel or German silver instead of the usual nickel brass. A threaded spindle on the end of one section of the two-piece handle, which

FIG. 3.

screws into the blade, holds the blade in position. Both blade and guard being held securely together, there is ample play in the guard for accurate adjustment. In Fig. 2 all the parts are shown separately, and Fig. 3 shows the decorated hinged, felt-lined metal container, in which the article is marketed. This is shown actual size, the extreme dimensions of which are 2 3-16 x 1 1/4 x 1/2 inch, the weight of the entire outfit including box being less than 1 1/2 ounces. The limited space required by the razor makes it particularly desirable for tourists or other travelers with whom bulk and weight have to be considered. As each metal container is put up in a neat dove-tailed slide-cover wood box, it is admirably fitted to answer the mail order department of the dealers handling the same. One of the most important features in connection with the marketing of this specialty is the moderate price at which it is offered the trade.

#### The Rochester Radiator.

The Rochester Radiator Co., Rochester, N. Y., whose advertisement will be found in another column, are placing before the trade what is claimed to be a Radiator possessing points of superiority, and which as far as it has been introduced, has met with every evidence of appreciation. It is designed to be placed on the stove pipe next to the stove,

FIG. 1.

FIG. 2.

THE ROCHESTER RADIATOR.

with the promise that it will double the capacity of the heater, or by its addition to the stove give you the same amount of heat with half the fuel. It can be placed in the room on the floor above, or in an adjoining room, where it may be made to do all the work of an additional stove with no labor and no further expense, as it utilizes all the waste heat. The radiator is constructed from American Russia iron, with highly ornamented nickeled cast iron top, base and legs. It is made in a number of styles suitable for stove pipes running from five to nine inches. The most popular style for general use is shown in Fig. 1, being Style A, the list price of which is given as \$8. The diameter of this style is 12 inches,

length 34 inches, weight 30 pounds. No. 15, suitable for 5-inch pipe, and No. 155, for 5 1/2-inch pipe, is provided with 84 cross tubes, which operate as shown in the sectional view presented in Fig. 2. Nos. 16 and 17, designed for 6 and 7-inch pipe respectively, are provided with 96 cross tubes, which gives the greatest amount of radiation possible in the ordinary size of stove, for which they are intended.

#### The Grant Change Pipe Cutter.

The Hardware trade handling plumbers' and steam fitters' supplies will be interested in the Grant Change Pipe Cutter, which is being put on the market by Homer F. Livermore, 81 Pearl Street, Boston, Mass. The cut indicates clearly the construction of the tool, one of the features of which is a

THE GRANT CHANGE PIPE CUTTER.

reversible block used in connection with the adjusting lever. On two corners of this block are rolls, and on the other two corners are disk cutters. This block can be readily reversed so as to bring all three cutters into play in cutting large pipe. The rolls will press small pipe against the single cutter when the smaller sizes of pipe are being handled. The cutter may be adjusted for cutting all sizes of pipe from 1-8 inch to 2 inches, so that only one pipe cutter is necessary in a kit of tools to equip the workman for all ordinary work. It is also claimed that the tool is made of the best materials and is strong, light and simple, so that it is likely to be durable. The parts are all made interchangeable so that in case of accident any part may be readily renewed.

#### Fenn's Rotary Ventilators.

George E. Fenn, 94 Blackstone Street, Boston, Mass., is distributing a small 12-page illustrated catalogue in the interest of Fenn's Rotary Ventilators. These ventilators are manufactured in two styles—viz., Fenn's Patent Rotary, and Fenn's Archimedean Rotary Ventilators. Both are designed to work on the same principle as an exhaust fan, but have a vertical instead of a horizontal axis. They consist of a bed or cylinder and the whirling head or fan is attached to a vertical spindle. At each end of the spindle are bearings adjusted so as to be absolutely noiseless and free from friction. In the working of the ventilators the wind is used as the motive power, revolving the head with great rapidity, thereby throwing off the pressure of the atmosphere and creating a partial vacuum or suction which induces a strong upward draft in the chimney. These ventilators are claimed to be absolutely storm proof, it being impossible for rain and snow to reach the inside. They are made of galvanized iron furnished either painted or unpainted, in sizes from 4 to 30 inches in diameter. The catalogue also calls attention to the Chimney Bases and Ventilator bases made by the concern, which are deemed necessary to a proper setting of the rotary ventilators.

#### Simon Frost Believes

When the axles begin to squeak it's time to grease the wheels.

Even a hoss knows it's easier to climb a steep hill by takin' a zig-zag path.

Meetin' death's an invitation ye can't get out o' acceptin'.  
"They that sows the seed won't reap the harvest without they hoe the corn while it's growin'," says Simon Frost.

## REVIEW OF THE MARKETS.

**Wire Nails:** There is still a very satisfactory demand for Wire Nails, which, from present indications, do not seem to be largely in overstock either in the dealers' hands or at the mill. Sales for July and so far in August have been larger than was expected. Prices remain unchanged as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
"          less than carload lots.....	2.35
To retailers in carload lots.....	2.40
"          less than carload lots.....	2.50

*New York prices.* The demand for Wire Nails is fair. The following prices represent the market :

To retailers, carload lots on dock.....	\$2.58
Small lots at store.....	2.60

**Cut Nails:** July prices having been affirmed for August sales, the demand for Cut Nails is in about the usual moderate condition noted for the season, prices remaining as previously quoted, as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	\$2.10
Carload lots.....	2.00

*New York prices.* The local market is without especial energy, and prices remain as follows:

To jobbers in carload lots on dock.....	\$2.18
"          less than carload lots on dock.....	2.18
Small lots from store.....	2.25

**Barb Wire :** The mills are gradually getting back orders filled, and prompter deliveries are beginning to be noted. The Western demand continues very good. Sales are largely in excess of anticipation for the Summer season, the jobbers having had a record business ever since the Spring season opened. Quotations remain as previously noted, F. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
" " Galvanized.....	2.80
" less than carload lots, Painted.....	2.85
" " Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
" less than carload lots, Painted.....	2.80
" " Galvanized.....	3.00
" " Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** The volume of business is still of a character that prevents prompt shipments by the mills, which are somewhat behind in filling orders. Quotations remain the same, as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

		Base sizes.	
		Plain.	Galv.
To jobbers in carload lots.....		\$2.25	\$2.85
"    less than carload lots....		2.30	2.70
To retailers in carlots.....		2.35	2.75
"    less than carload lots...		2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence Wire Advances (Catch Weights).			
Nos.	Base.	Galvanised.	
6 to 9.....	\$0.05	\$0.40	extra.
10.....	advance over base.....	.40	"
11.....	.10	.40	"
12 and 12½..	.15	.40	"
13.....	.25	.40	"
14.....	.25	.40	"
15.....	.45	.75	"
16.....	.55	.75	"
17.....	.70	1.00	"
18.....	.85	1.00	"

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Cordage:** The varying qualities of Cordage now prevailing in the markets, make settled prices somewhat difficult, each quality having quotations of its own. The following quotations represent the market for best makes of Manila, Sisal sympathizing with it to some extent:

	Pounds.	Cents.
Manila, 7-16 inch and larger.....	98	10 1/2
3/4 inch.....	100	10 1/2
1/2 inch and 5-16.....	108	7 1/2
Sisal, 7-16 inch and larger.....	7	8
3/4 inch.....	7 1/2	7
1/2 inch and 5-16 inch.....	8	6
Lath Yarn, medium and coarse.....	7	5
Jute Rope, No. 1.....	6	
No. 2.....	5	

**Blinder Twine:** The season is about over except in extreme Northern latitudes. Prices remain as previously quoted, and are as follows:

	Pounds.	Cents.
White Sisal, 500 feet per pound.....	7 1/2	
Standard, 500 feet per pound.....	7 1/2	
Manilla, 600 feet per pound.....	9 1/2	
Pure Manilla, 850 feet per pound.....	11 1/2	

**Linseed Oil :** The following are the latest quotations by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....	83 cents per gallon.
In lots of 5 barrels or more.....	82 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

**Bolled Linseed Oil, 2 cents per gallon higher than Raw.  
Calcutta Oil. 85 cents per gallon.**

THE PHILADELPHIA TRADE.

July has proved an unusual month, as the sales for that period were considerably in excess of the usual amount for that month, showing that even the unusually hot weather has not had the effect of retarding trade.

The usual vacation season is still upon us, and, while jobbers endeavor to get their vacations finished up in July, it seems as if August was the favored month among the trade generally for this purpose, and many local dealers are reported "away." The month, however, opens with very good prospects, and, if the Steel strike does not have a discouraging effect, there seems to be no reason why we should not enjoy good trade.

Prices are remarkably firm, and already the strike is blamed for some shortage of goods, which is apt to grow more acute as the strike is prolonged.

Reports from the farming trade seem to be varied; the heavy rains in the early part of the Summer appear to have done some damage, but, on the other hand, coupled with the drought in the West, they have so advanced prices on many farm products that it is to be hoped that farmers will be able largely to recoup their losses, and, possibly, come out ahead. Potatoes have already advanced heavily, and all farm produce is considerably higher than usual. BIDDLE HARDWARE Co.

## THE BALTIMORE TRADE.

Business is now beginning to improve and larger or stock orders are more numerous. Tinware and plate are soaring, due possibly to the strike which is still an unknown quantity. The general market seems steady with the exception of Shovels and Steel Goods, which goods are likely to drop in the near future in consequence of the large number of independent manufacturers, outside of associations that have been endeavoring to get exorbitant prices on such goods manufactured in these lines. Rebates due us on shovels which have matured in the past four months are still in the hands of Mr. Parks, notwithstanding the fact we have several times

requested remittance. The committee of the Steel Goods Association must be having a hard time to determine the amount of rebate the jobber is entitled to on purchases for the past season, judging from the length of time this matter is supposed to have been in their hands.

Such conditions are suggestive of methods which do not reflect credit upon associations and can but lead to distrust on the part of those who have placed contracts and confidence in fair dealings. We hope there is a brighter day for the jobber near at hand, as prospects for making money handling Hardware at present are not very encouraging.

Making a living simply is not making money, but when a fellow can work hard twenty or twenty-five years and then find he has laid up enough to retire upon he might feel that he has made money and is not too old to enjoy it. Collections continue good.

H. W. WEBB & SONS.

#### THE PITTSBURGH TRADE.

Business has kept up in the jobbing trade remarkably well all through the Summer. July was a very busy month and August is opening in the same way. Mail orders during the vacation of travelers came in such numbers as to keep all the force at work.

The two drawbacks to perfect conditions are the partial failures of the Western corn crop and the unsettled strike in the steel mills.

At this writing, negotiations are still going on, and the result is uncertain, but we hope for an early settlement.

LOGAN-GREGG HARDWARE CO.

#### THE SAGINAW TRADE.

July trade was very satisfactory, the best for several years. This is remarkable from the fact that no salesmen were out, it being vacation time. The outlook for Fall is very good. The indications are there will be a great demand. Our only fear is, that the trouble among the steel and iron workers is going to cause delays and disappointments. Our only hope is that good common sense will rule, and a settlement be made that will enable all wheels to turn and the prosperity of the country left undisturbed.

MORLEY BROS.

#### THE ST. PAUL TRADE.

Everything in our section looks favorable to harvesting a good crop, and we cannot see how anything can occur to affect it to any extent. The good reports for all of Minnesota, North and South Dakota, Wisconsin, Iowa and Montana, as well as Washington, are general. Prices are upheld with sharp advances on black and galvanized sheets, tin and terne plate, and many articles made of this raw material. We all wonder what the result of the strike will be, but feel that even if settled soon, there must be a scarcity of certain goods.

C. W. HACKETT HARDWARE CO.

#### THE DAVENPORT TRADE.

After a month of intensely hot weather and drouth, we have one inch of rain and cooler weather.

Circumstances and conditions considered, the amount of sales have been satisfactory indeed. The sales footings for July are more than for the same month a year ago.

The crops are seriously damaged by heat and drouth.

Prices in many lines are advancing and jobbers are not disposed to advance their selling prices accordingly. Collections only fair.

SICKELS, PRESTON & NUTTING CO.

#### THE GRAPHITE TRADE.

Since our letter to you in the beginning of July relative to graphite and graphite productions, matters have been moving on very much the same as at that time; business continues to be good all along our various lines.

Usually during the Fourth of July week, we try to close down for a few days for boiler inspections and general overhauls, but this year the short close-down was a positive set-back to our overcrowded order books.

Like other readers of your journal, we well remember seven years ago, and we appreciate, as the *New York Sun* puts it, that the situation at the present time is, in nearly every important respect, the reverse of that of seven years ago.

"First, and most important of all, the monetary system of the United States now rests securely upon a substantial foundation. We have followed the example and profited by the experience of all older nations in adopting unequivocally the gold standard. All the money heresies are dead beyond hope of resurrection. The Federal treasury is overflowing with gold, and the Secretary of the Treasury is doing his best in utilizing the surplus income in retiring the obligations of the Government. Within the last three years the country has sprung by a tremendous leap into the foremost ranks of military, diplomatic and commercial nations.

"The general business of the country certainly reflects no apprehension of an impending descent into a condition of depression and inactivity. The railroads of the country were never financially stronger than they are to-day, and this after spending hundreds of millions of dollars in improving their physical condition and to increase their facilities. It is possible, of course, that evils of great magnitude are lurking beyond the horizon, but there is no suggestion of them, not even as large as a man's hand."

JOSEPH DIXON CRUCIBLE CO.

#### Artificial Leather.

Consul-General Hughes writes from Coburg, July 11, 1901, that, according to the German press, fibro-leum, a new artificial leather, has just been invented by a Frenchman. It consists of pieces of refuse skins and hides, cut exceedingly small, which are put into a vat filled with an intensely alkaline solution. After the mass has become pulpy, it is taken out of the vat, placed in a specially constructed machine, and after undergoing treatment therein, is again taken out and put through a paper-making machine. The resulting paper-like substance is cut into two large sheets, which are laid one upon another, in lots of from 100 to 1,000, and put into a hydraulic press to remove all moisture. The article is strong and pliable, and can be pressed or molded into all kinds of shapes and patterns. It is said to make the best kind of wall paper. Decorators who have used this article speak of it in the highest terms.

•

"The late editor's wife is something of a humorist."

"Indeed?"

"Yes; took a line from his original salutatory and placed it on his tombstone."

"What was it?"

"We are here to stay!"—*Atlanta Constitution*.

### Where Your Mind is Blind.

Things which we see daily but cannot describe.

You go up and down the stairs in your house on an average eight times a day. Yet even after living in that house twenty years, the odds are heavy against your being able to tell the exact number of steps.

There is no catch about this. It is simply that your brain does not register permanently one-tenth of the impressions your eye or ear nerves convey to it every minute of your life.

If any one asks you what sort of numerals there are on your watch face, you will say without hesitation, "Roman." But in all probability you have never noticed that the usual Roman symbol for four, IV., becomes on your watch face III.

You can stump any friend by asking him suddenly how many spokes there are in a carriage wheel and how many in a bicycle wheel. For your private information, sixteen and thirty-two are the respective numbers.

A pearl pin may be stuck in your tie every morning of your life, and at the end of ten years you will probably not be certain, without looking, of the number of stones in it. The man who can give you the number of his watch off-hand you can set down as quite out of the common run.

"Middle height, dark hair, was wearing a dark suit and a bowler hat."

"That," says a police sergeant, "is about the average description we get of a missing man, even from his nearest relative." The color of one man's eyes was given by his sister as blue, by his brother as gray, while his father declared they were hazel. Trifles such as a man's complexion, whether he has any teeth missing, the color of his tie, and the pattern of his clothes, are generally unknown to his relatives.

Many men who see a thousand horses a day in the streets could not tell you, without looking, on which side the mane lies; and there are hundreds of others of country birth and bringing up who have never noticed one curious difference between cattle and horses. In rising after lying down a cow always straightens her hind legs first, whereas a horse rises on his front legs to a dog-like sitting position and then jumps to his feet.

England is famous for its east winds. Even an Englishman would be slow to believe if you told him that east wind is prevalent for less than one quarter of the year. It blows three days from the southwest for every one from the west.

There are three hundred sorts of British birds, a hundred of which are so common that people who live in the country have probably seen all of them. Yet not one person in twenty can point out the difference between the crow, the rook, and the jackdaw. House-martins, sand-martins and swifts are

all lumped as swallows. Even hen blackbirds and thrushes are constantly confused.

You will often see stuffed birds in positions they never assumed alive. A thrush, for instance, in the act of singing, with its beak pointing straight to the sky. A man whose business it is to mount birds should have seen for himself that the thrush tilts its head but slightly when in song.

It sounds absurd to talk about flowers anywhere except in hothouses these dull Winter days. But he who has eyes to see knows that gorse blossoms all the Winter through, and that delicate little mosses and lichens put forth their tiny blossoms along the bare Winter hedgerows.

Next time it snows, go out and catch a few flakes on your coat-sleeve, and watch them before they melt. If you have never before taken a good look at a snowflake, you will be amazed at the new world of exquisite shapes opened up.

Cats and squirrels are both capital tree climbers. Watch a squirrel coming down a trunk. It rattles to the ground head first with its hind feet twisted backward. The cat, on the contrary, invariably comes down backward until quite close to the ground, when it turns and jumps.

Your mind tells you that you see things as they are. But your mind is wrong. The eyes sees everything upside-down, and it is sheer force of habit that has accustomed your mind to reversing the tops and bottoms of things.—*London Answers.*

### Where Camphor Comes From.

A writer in a recent *St. Nicholas* notes that camphor grows in China, Japan and other parts of eastern Asia. Occasionally a camphor tree becomes so old and so large that it is a veritable landmark. In 1691, for instance, a traveler in Japan described a tree which he found that was thirty-six feet about the trunk. Almost a century and a half later the same tree was said by another traveler to be fifty feet around. "If you take one of the shiny green leaves from a camphor tree and rub it gently between two stones you smell the same odor as comes to you when you take the lid off a camphor jar. Every part of the tree contains its part of the gum, but the bulk of it comes from the root, trunk and branches. The first step is to reduce a tree to chips, and these are put into iron vessels having a cone-shaped cover lined with rice straw. Then the vessels are heated and the camphor is driven out of the chips. Do you know what I mean when I use the word "volatile?" No? Well, a thing is volatile that seems to fly off in the air. Now, camphor is volatile; it is capable of being changed into vapor. When heat is applied to the iron vessels the camphor is volatilized, but it condenses almost at once; that is, it is changed to a multitude of tiny little lumps of solid camphor, which fasten themselves on the straw that lines the cover. It is then scraped from the straw, refined and pressed into blocks."

### The Right Temperature for Varnish.

Varnish is so often applied under unsatisfactory conditions of temperature and is subjected to such extremes of heat and cold while it is kept in stock, that many unsatisfactory jobs are thought to be the fault of the varnish, when really the trouble is all due to the wrong temperature.

The best temperature for the varnishing room is 70 degrees. It is necessary in order to produce the best results, to have the varnish and the surface over which it is to be applied of about the same temperature as the room. If the room is too cold the varnish is liable to run, will not dry satisfactorily and may pit. If the surface is too cold the result is apt to be much the same as if the room were cold. The pitting may be accounted for by the varnish contracting after it has been spread out over a cold surface.

If the varnish is cold it will be too heavy, will work hard and it will be almost impossible to get a good, smooth, finished surface.

To keep the varnish at right temperature it is well to keep it in a cool place in Summer and a warm place in Winter. It should never be stored in cold, damp cellars nor in extremely cold rooms, where there is no heat in Winter. If it is not possible to keep it in a place that is warm enough, it is advisable to bring the varnish into the room long enough before using, so that it may become thoroughly warmed through. It is well to warm the cup before putting varnish into it. It might do to put the can on a radiator for a while, being careful to open it first. It should not be allowed to get hot though, as this would make the varnish too thin, and would be apt to cause it to pit if applied when it was much warmer than the surface.

In cold weather it is well, if possible, to do the varnishing in the morning, so as to have the benefit of the warmer air during the day to assist the drying.

In short, to get the best results varnish should not be exposed to extremes of heat or cold. We keep our varnish storage buildings at a temperature of about 70 degrees all the year 'round. Then in applying varnish, the most satisfactory results will be obtained if the room, the varnish and the surface are all at about a temperature of 70 degrees.—W. R. SIEPLEIN, in *The Chameleon*.

### Rerolling Old Steel Rails.

During the past five years there has been developed a method of utilizing old steel rails which bids fair to become an important factor in the steel industry. About ten years ago an official of the Chicago, Milwaukee & St. Paul Railroad turned his attention to the problem of utilizing worn-down and defaced rails by rerolling them to a size somewhat smaller than the original section. After considerable experimental work, it was determined in 1897 to erect a plant for the special purpose of rerolling old rails. The first plant was erected at Joliet, and in 1898 a second plant was built at Kansas City. At the present time over 1,000 miles of track have been relaid with rails that have been passed through the rerolling mills, a total of nearly 100,000 tons having been thus treated by the new system. The wear upon the rails is chiefly on the top and inside of the head of the rail. In the process of rerolling the rails are very slightly reduced in the webs and flanges, while the contour of the head is restored to

a symmetrical, though somewhat smaller, section. The process, as stated by *Scientific American*, consists in first passing the rails beneath a set of grinders, which take off the slivers and rough edges from the head, then heating them in a special furnace to a temperature of 1,700 degrees and rolling them down to the desired section, the rails passing out of the finishing rolls at a temperature of 1,480 degrees. The rails are then sawed to proper length, straightened and the holes drilled for the angle bars. The thorough working over of the metal at such a comparatively low temperature serves to improve its quality, not chemically, of course, but by virtue of the density and toughness which result from a thorough working over of steel and iron. The reduction of the section of the rail produces a corresponding elongation, a thirty-foot rail being increased by one to two feet in length for a reduction of cross section of 8 per cent. The value of this system is obvious, particularly in view of the fact that theoretically the oftener a rail is rerolled the better its quality. Since many of the great railroad systems use three or four different weights of rail, it is evident that rerolling will result in considerable economy.

### Antiquity of Platinum.

Professor Berthelot reports in a recent number of the *Comptes Rendus*, says *Science*, that on a metallic box from Egypt, covered with inscriptions, he found a portion of one of the characters made of platinum. The mass was too small for a complete analysis, but from its behavior toward *aqua regia*, it appeared to be native platinum. The date of the box was about 700 B. C. From two standpoints this discovery is of more than passing interest. It has been a much disputed question whether platinum was known to the ancients. Passages from the classics have been quoted which appear to some to be references to platinum, but this application is in every case very doubtful. A much stronger argument against the probability of platinum being known more than a few centuries ago, is, that until this discovery of Berthelot's, no trace of the metal has been found in any ancient remains. Had platinum been known, it is hardly conceivable that specimens of it should fail to be found somewhere among the multitudinous remains of antiquity. This present discovery really emphasizes the argument, for it would seem from the description given by Berthelot that this specimen of platinum was used by the workman unwittingly, resembling as it does some of the pale gold of Egypt. A second interesting point is that if Berthelot's conjecture be true that this is native platinum, obtained from the alluvial deposits of Nubia or the upper regions of the Nile Valley, it is the first recorded occurrence of platinum in Africa, with the single exception of an observation of Aime, in 1838, that some of the galena from Algeria contains a trace of platinum.

“Well, that's enough to try the patience of Job,” exclaimed the village minister as he threw aside the local paper. “Why, what's the matter, dear?” asked his wife. “Last Sunday I preached from the text, ‘Be ye therefore steadfast,’” answered the good man, “but the printer makes it read, ‘Be ye there for breakfast.’”—*Glasgow Evening Times*.

Endure trials patiently.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Galion, O.—P. C. Thomas Hardware Co. The capital stock is \$12,000 and the incorporators are P. C. Thomas, P. M. Daily, A. W. Lewis, C. A. Koppe and Mary R. Thomas.

Kingman, Me.—James Cavanaugh.

Manchester, Va.—Judge Witt has granted a charter to a new Hardware company to do business in this city. The company will be known as The W. S. Donnan Hardware Co. The purpose is to conduct a general wholesale Hardware business in all its branches. The minimum capital stock is \$60,000, and the maximum \$100,000. The main office will be in Manchester. The officers are: President, W. S. Donnan; vice-president, John Donnan; secretary and treasurer, Samuel C. Donnan, Jr. Board of Directors, W. S. Donnan, John D. Donnan, Samuel C. Donnan, Jr., Walker D. Stewart, R. E. V. Farrar.

Minneapolis, Minn.—Nelson & Boquet Co., 206 Nicollet Ave.

N. Pasadena, Cal.—J. Edward Kent.

Pawtucket, R. I.—Wm. K. Toole.

Petoskey, Mich.—Brackett Hardware Co. has been incorporated with a capital stock of \$50,000.

Pratt City, Ala.—J. T. Rodgers and J. D. Hanby will open up a Hardware business in Pratt City in a short time. Albert Rhodes will accept the position as business manager. They will occupy the store vacated by Alston Bros.

San Antonio, Tex.—Schultze Stove & Hardware Co.; capital stock, \$30,000. Incorporated by Herman Schultze, Sr., Max Schultze and William Schultze.

Shawnee, Okla.—Shawnee Hardware Co.; capital stock, \$20,000. Incorporators, Amos F. Streight, C. W. Worthen and Nellie W. Streight, of Shawnee.

St. Louis, Mo.—The Boehl Hardware Co., capital \$6,000, has been incorporated by Henry Baumgaertner, M. E. and I. L. Boehl.

St. Paul, Minn.—The Charles E. Faeth Co., wholesale Hardware dealers of Sioux City, Iowa, have incorporated under the Somerville law. The capital stock of the company is placed at \$150,000, of which \$14,250 is employed in Minnesota.

Waynesboro, Pa.—Beck & Corbett.

Wilmington, Del.—S. L. Fell & Co. have recently added to Wilmington's business enterprises an exceptionally complete and well-managed retail Hardware store at 7 West Fourth Street.

### Changes and Improvements.

Carlock, Ill.—R. K. Castle has sold his Hardware and implement store to O. A. Collins, who has a similar business at Anchor.

Cincinnati, O.—The Rendigs-Magill Hardware Co. has changed its name to the

Rendigs Hardware Co. William Rendigs is president and H. J. Power, secretary.

Newfane, N. Y.—Wm. H. Beers & Son are taking inventory of their stock of Hardware preparatory of transferring their business establishment to Burt and Willis Pettit, who have purchased the same.

Phoenixville, Pa.—The Hardware store belonging to the estate of N. H. Benjamin was sold to H. C. and Charles M. Ghiskey, Jr., of Philadelphia.

### Embarrassments.

Ottawa, Ill.—The store of Armstrong & Mitchell has been closed on a chattel mortgage held by P. G. Schoch for \$150. Armstrong & Mitchell conducted a Hardware, farming implement and bicycle store in the Colwell block on La Salle Street.

Perrysville, O.—John J. D. Tucker's Hardware and implement store has been placed in the hands of J. W. Mykrantz as receiver. Assets, \$4,100; liabilities, \$3,400.

Syracuse, N. Y.—Henry King, who conducts a general Hardware store and tin shop, has made a general assignment to Fred W. Hammond, of 703 Tallman Street, for the satisfaction of his creditors.

Tivoli, N. Y.—Charles H. Morgan, of Tivoli, has been declared a voluntary bankrupt. His assets are nothing, while his liabilities are \$1,600. Mr. Morgan was a Hardware dealer.

Canton, La.—W. Colquhoun, Hardware, has gone into bankruptcy. P. C. Parker has been made trustee. Liabilities \$5,400, assets \$2,000.

Chicoutimi, Canada—Thomas Cote, Hardware and grocery merchant, has assigned with liabilities of \$21,286, and assets of \$13,000.

Orange, Texas—H. A. Burr, who has been engaged in the grocery and Hardware business at this place for some time past, made a general assignment for the benefit of his creditors, N. Burton, Jr., being named as assignee. The liabilities are about \$6,000.

Scandia, Kan.—Lervold & Mahan, Hardware and general dealers in merchandise in Scandia for several years, have failed, with liabilities aggregating \$8,500; assets said to be about \$6,000.

### Burglaries in Hardware Stores.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Belvidere, Ill.—The Frank W. Plane Screen Door Co.; capital, \$15,000; manufacturing screen doors. Incorporators, Frank W. Plane, Charles S. Kucker and Arthur F. Appleton.

Cleveland, O.—The Frank White Tool and Supply Co., with an authorized capital of \$25,000, has been incorporated by Frank C. White, Paul G. Muhlhauser, D. K. Swartwout, James C. Wilmot and H. C. N. Smith.

Haverhill, Mass.—Another new industry has been started in Haverhill and will be enlarged, becoming a valuable acquisition to the local business world. The plant is operated by the Briggs-Belmer Edge Tool Co., at 50 Phoenix Row, and when in full operation over 30 skilled workmen will be on the firm's payroll each week.

Indianapolis, Ind.—Under the new foreign incorporation law the Favorite Stove & Range Co., of Piqua, O., a West Virginia corporation, has filed articles with the Secretary of State. This company owns no property in Indiana, but sells goods in this State annually amounting to \$48,000. It sells direct to its customers. The resident agent is George W. Landon, of Kokomo.

Lansing, Mich.—The Kalamazoo Stove Co., organized with a capital stock of \$65,000, has filed articles of incorporation with the Secretary of State.

Lebanon, Pa.—Gobin & McCurdy, solicitors of the Hardware & Foundry Co., have placed on record the charter granted the company on July 5, 1901, by the State Department. The business is to be transacted in this city and the foundry is the old Mish foundry on North Seventh Street. The charter is perpetual, the capital stock \$15,000, and the shares are held by J. P. S. Gobin, E. E. McCurdy and W. A. Bachman. The directors are the incorporators and E. E. McCurdy is the treasurer. The purpose is manufacturing iron and brass castings, brass or steel or alloy or of any other metal and any article of commerce from metal, wood, or both and to sell such articles so manufactured by it.

New Haven, Conn.—A joint stock corporation known as the American Pedometer Co. has been organized in this city with capital of \$2,500. The purpose of the company is to buy, manufacture and sell pedometers and measuring instruments of all kinds. The concern will locate in this city and will begin the manufacturing of pedometers shortly. The subscribers to the stock are James E. O'Connor, N. D. Moulds, Edmond Kuhn.

New York, N. Y.—Empire Pneumatic Tool Co.; capital, \$10,000; directors, J. W. Birkenstock and P. A. Gage, of New York City, and Lincoln Pierce, of Pelham.

New York, N. Y.—The Loew Filter & Mfg. Co.; to manufacture machinery, tools, Hardware and materials used in connection therewith; capital, \$50,000.

### Changes and Improvements.

Alton, Ill.—The Beall Shovel Co. has begun the manufacture of shovels at its new factory on Plasa Street.

Cadillac, Mich.—It is quite probable the Mitchell Bros. will rebuild their handle factory which burned here last April.

Canastota, N. Y.—The firm of Angell & Dobson, manufacturers of molders' tools, have dissolved by mutual consent. Mr. Dobson will continue the factory.

Chicago, Ill.—The McCormick Harvesting Machinery Co. is about to begin the construction of an addition to its large plant at South Leavitt Street and the Chicago River. It will be five stories high and will extend over an area of 83x160 feet. It will be constructed of common brick and will cost \$75,000.

Clayville, N. Y.—The old plant at Clayville, long operated by the Millard Co., has been leased for a term of years, and, it is understood, will soon be re-opened for the manufacture of agricultural implements.

Decatur, Ind.—John Bowers has purchased the plant of the Cochran Window Screen Factory at Delphos and the screens will be manufactured in this city, at least for the present.

Fredericksburg, Va.—A. Randolph Howard, who has purchased the Hunter Foundry and Plow Works here for \$12,000, has formed a stock company to, conduct the business, with John T. Knight, president; Isaac Hirsh, vice-president; A. Randolph Howard, treasurer; W. D. Carter, secretary; W. L. Burruss, manager. The company will be incorporated and known as the Charles E. Hunter Farmers' Friend Plow Works.

Kenosha, Wis.—The plant of the Chicago Brass Works has been transferred to the Coe Brass Co., of Torrington, Conn., for a consideration of nearly \$400,000. The deal is an absolute sale, the Coe Brass Co. having taken possession of not only the plant in Kenosha, but also of the brass store and office business of the company in Chicago. F. L. Titsworth and J. K. Fletcher, the present superintendent of the plant, will remain under the new management.

Menasha, Wis.—The Simpson Mfg. Co., of Omaha, manufacturers of washing machines, will soon locate in Menasha.

Port Chester, N. Y.—The Port Chester Bolt and Nut Works intends to move its large plant to Buffalo. The concern employs more than 1,000 hands.

Trenton, N. J.—The American Saw Co.'s plant adjoining the Roebling Works, has been purchased by the Roeblings, and it will be operated by them as a saw concern until such time as the machinery, good will and patents can be disposed of, and then the plant will probably be made an ad-

dition to the Roebling concern.

Toronto, Can.—The Frost & Wood Co., Ltd., of Smith's Falls, implement manufacturers, have purchased the buildings, plant and good will of the Coulthard-Scott Co. of Oshawa. The latter company manufacture seeding and cultivating machinery, and the Frost & Wood Co. have heretofore confined their output largely to harvesting machinery. It is said to be the intention to largely increase the output of machines at Oshawa, and there is a prospect of a second concern being taken in. It is located west of Toronto.

Winooski, Vt.—Mason & Co. have secured the contract to construct a \$20,000 mill for the Porter Screen Mfg. Co. Ground will be broken at once for the foundations and the building will be completed early in August. The plans call for a wooden three-story structure 280 feet long and 60 feet wide. The mill will be built near the site of the one destroyed by fire last year. It will run at right angles with the railroad and will extend nearly across the property owned by the company.

West Allis, Wis.—The Browning Mfg. Co. and the Kempsmith Tool Works have each bought sites for manufacturing establishments at West Allis, and are expected to begin the erection of their buildings in the near future, though the removal of the manufacturing plants will not come about for a year.

### Miscellaneous.

Hartford, Conn.—At the annual meeting of the stockholders of the New England Machine Screw Co., the following officers were elected: President, Charles P. Ball; vice-president, Robert Hilditch; secretary and treasurer, Willis Gowdy; board of directors, C. P. Ball, W. Gowdy, Robert Hilditch, Arthur R. Leete, Tudor Gowdy, George H. Ball and Aaron Segalla, of Hartford.

Turner's Falls, Mass.—At the annual meeting of the John Russell Cutlery Co., the following officers were elected: President, C. E. Stevens; treasurer, W. P. Dustin; assistant treasurer, E. P. Hitchcock; clerk, Frederick Clapp; directors, Charles E. Stevens, Ware; B. N. Farren, Charles T. Crocker, Fitchburg; W. P. Dustin, Jonathan Bulkley, New York; D. C. G. Field, Greenfield.

# A Meat Cutter

The Gem cuts meat—in fact it is a first-class meat cutter. It cuts meat, both raw and cooked; it cuts in pieces of uniform size; it cuts quickly and easily; it cuts—does not tear, squeeze or grind.

**A Food Chopper**

It chops vegetables, fruit, bread, crackers, cheese, nuts and many other ingredients that are used in the kitchen every day. A house-keeper will find the Gem exceedingly useful.

**To sell the Gem** get a supply of the printed matter we furnish and distribute it among the housekeepers of your section and at the same time use in your local papers the electrotyped advertisements we will gladly supply. Or have a house-to-house canvass made by a competent representative—one who can demonstrate to the housekeeper in her own kitchen that she needs the Gem. Or have an exhibit and demonstration at the County Fair so to be held and give out printed matter to every one. Then have an occasional window display of the Gem, use freely the attractive show cards packed with each half dozen, and remember that the Gem has steel cutters that cannot break.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Adams, Mass.—Kearn & Powers have opened a bicycle sale and repair shop in the Masonic building.

Albert Lea, Minn.—W. E. Marchant and Walter Christensen.

Allendale, S. C.—G. W. Woodruff.

Alton, N. Y.—Irving Legg has opened a bicycle repair shop near the depot. He will also make a specialty of repairing automobiles.

Alvin, Tex.—Slover Bros.

Amsden, Vt.—Fred. Perry has opened a bicycle store. He will also do a general bicycle repairing business.

Augusta, Me.—Leon Buker has opened a bicycle repair shop in the Steward Block, on Island Avenue.

Bay City, Mich.—Rigel Bros. & Co.

Big Bend, Wis.—Whitney Stratton.

Camden, N. J.—The Hart Cycle & Automobile Co., with an authorized capital of \$50,000, has been incorporated in Camden by Josiah G. Reeve, of Camden; Samuel H. Avis, of Palmyra, and Gertrude Hart, of Philadelphia.

Chicago Heights, Ill.—A. Bourassa.

Chicago Heights, Ill.—Jacob Keilman, 32 Main Street, repairing.

Cottage City, Mass.—H. E. King.

Hicksville, O.—S. G. Fletcher.

High Bridge, N. J.—The Taylor Automatic Gun Co., capital stock \$135,000, has been incorporated under the laws of New Jersey.

Homer, Idaho—H. A. Bottomly.

Lisbon, N. H.—W. A. Shawney.

Lyons, N. Y.—William H. Kline.

Mason, Mich.—Frank Drake.

Moravia, N. Y.—Lorenzo Edgerton has opened a store in the Hunt block, on Central Avenue, and he will conduct a general bicycle repairing business.

Mulhall, Okla.—Albert Justice.

Newport, R. I.—Edward W. Watkins.

Pascoag, R. I.—John Quinn has opened a bicycle repair shop on Main Street.

Plainfield, N. J.—Nelson Van Winkle.

Rockford, Ill.—D. J. Hummel.

Shakopee, Minn.—Glenn Kennedy.

Westport, Conn.—Frederick Kemper has opened a bicycle repair shop in the Bargain Store, 1 Hurlburt Block.

### Changes and Improvements.

Ballston Spa, N. Y.—T. W. Nichols has purchased the bicycle and general repair business for a long time conducted by Kerley & Co.

Bay City, Mich.—Wm. Carey has sold out his interest in the Broadway bicycle repair shop to Arthur Thorp, who will continue to do business alone hereafter.

Belfast, Me.—F. J. Stephenson has equipped a large machine shop in the Har-

ris building, on High Street, and he will do a general bicycle repairing business.

Bridgeport, Conn.—Owing to an increase in business, the capital stock of the Smith & Egge Co., makers of bicycle sundries, has been increased from \$60,000 to \$100,000.

Brockton, Mass.—W. H. Marble, bicycle dealer, had a meeting with his creditors recently and an agreement was arrived at whereby Mr. Marble will continue in business, in conjunction with James Lahan, until his debts are discharged.

Burlington, N. C.—Thurston & Bro., bicycle dealers, have disposed of their business.

Bushnell, Ill.—Ross Ball Brothers succeed Ball Bros.

Campello, Mass.—Edward Pratt, retired.

Chehalis, Wash.—W. E. Taylor, bicycle and repair shop, has sold his business to C. D. Welton.

Danville, Va.—J. M. Seegar, salesman for Henry Keidel & Co., of Baltimore, has purchased an interest in the sporting goods firm of L. C. Clarke & Co. At an early day the company will be incorporated, Messrs. Clarke and Seegar owning the bulk of the stock. L. C. Clark will be the local manager of the new company and give to it his personal attention, while Mr. Seegar will continue the traveling representative of his Baltimore house.

El Paso, Tex.—Buffham & Freeman, bicycle dealers, have dissolved partnership. C. D. Freeman will continue the business.

Fair Haven, Vt.—Walter I. Smith has purchased the bicycle business of the Norton Co.

Gouverneur, N. Y.—Dwight Bacon has sold his bicycle repair shop on Clinton Street to Walter Lytle. Mr. Lytle will conduct it hereafter.

Kingston, N. Y.—Oppenheimer Bros., of Broadway, have decided to close out the balance of their bicycle stock.

Lawrence, Mass.—Holman J. Stanchfield, for many years in charge of the bicycle department of Sanborn & Robinson, has gone into business for himself, dealing in all kinds of Hardware and mill supplies, and bicycles and bicycle sundries.

Leavenworth, Kan.—Leavenworth Cycle Co. The proprietors, George W. Combs and August L. Schott, have dissolved partnership, Mr. Schott continuing.

Logansport, Ind.—Simon J. Carroll, who for a long time has conducted a bicycle store on Market Street, has closed out his stock.

Lyons, Ia.—George Riggs succeeds H. L. Traub.

Manchester, Conn.—C. D. Barrows, bicycle dealer, has been compelled to engage quarters in the Spencer Block, Depot Square, owing to the large increase in his business.

Marion, O.—Jacob Miller, an employee at the Humber Works, has purchased the C. H. Kaiser stock of bicycles.

Meriden, Conn.—John F. Ives has sold out his interest in the bicycle firm of Arnold & Ives, on Church Street, to his partner, F. A. Arnold, who will hereafter carry on the business alone.

Middleboro, Mass.—Colonel James Edgar, of Brockton, Mass., has purchased a half interest in the Hilton Valve Co., and will look after the financial end of the business.

Mohawk, N. Y.—Waldo E. Woodcock, who has conducted a bicycle sale and repair shop, has sold his business to R. L. Houcks.

Moline, Ill.—Gus Sheppard succeeds Moses Ross.

Nashua, N. H.—A. C. Pollard succeeds N. W. Tarbell & Co.

Norwich, Conn.—A certificate of increase of the capital stock of the W. H. Davenport Fire Arms Co., from \$20,000 to \$50,000, has been filed with the Secretary of State.

Paris, Ill.—Paris Bicycle and Plating Works; C. H. Anderson has purchased the business from C. F. Probst, giving a 130-acre farm in exchange.

Pawtucket, R. I.—Dawson & Co. are to close out their entire stock of bicycles and sporting goods.

Plainfield, N. J.—Nelson Van Winkle has succeeded to the bicycle and repair business of William H. Rogers, on North Street.

Rochester, N. Y.—L. H. Banister, formerly associated with Arthur McNall, has opened up a livery and repair shop on East Avenue, in the building formerly occupied by Mr. McNall.

St. Paul, Minn.—The St. Paul Cycle Co. have advertised that they are going to sell out their business.

Toledo, O.—The National Cement and Rubber Co. has taken over the entire business of the Excelsior Cement Co., of Worcester, Mass., and all orders intended for the last-named company will be filled at Toledo.

Uxbridge, Mass.—Victor Eckberg has sold his bicycle business in that place to James A. Milligan.

Wichita, Kan.—H. H. Hess & Co., succeeds Musselman Bros.

### Recent Fires.

Meriden, Conn.—A. M. Shepard & Co., 6 Crown Street; loss about \$75; insured.

New Britain, Conn.—William Samuelson, partially insured.

Ogden, Utah—B. Goodsell, bicycle dealer, has sustained a loss of \$100 through a fire. Fully insured.

Watervliet, N. Y.—J. Gray, Sixteenth Street; slight loss.

Wilson, N. Y.—Julius Weaver, who conducted a bicycle store, was a heavy loser by a disastrous fire which devastated the entire business section of the community. It is not known but what his loss will be covered by insurance.

Pittsburg, Pa.—Frank C. Houghton, Liberty Avenue and Ella Street, loss \$600, partly insured.

Fire Chief Swingley estimated the damage to the stock at \$50,000 and to the building at \$20,000.

# DIETZ No. 2.

## BLIZZARD (COLD BLAST) DASH LAMP

COX. N.Y.

### Dietz Nos. 1 and 2 Blizzard Dash Lamp

(COLD BLAST)
**FOR KEROSENE.**

THESE are our well liked Nos. 1 and 2 Blizzard, made with reflectors for use as Dash Lamps. They are made on the new COLD BLAST PRINCIPLE, give an extra fine light, and will stay alight in ANY WIND.

They are very convenient combination Lanterns, and can be used as Hand Lanterns, Wall Lamps or Dash Lamps, and are fitted with the same convenient Side Lift as our regular Blizzard Lanterns. For use on the dash, each lamp is provided with a strong spring to clasp over the dash.

No. 1 is japanned blue, is fitted with our patent Bull's-eye lens on perforated plate, takes a  $\frac{5}{8}$ -in. Burner and Blizzard Globe, and holds oil to burn 14 $\frac{1}{2}$  hours.

No. 2 is japanned blue, takes a 1-in. Burner and Blizzard Globe, and holds oil to burn 19 hours. The oil pots of these lanterns are drawn from tinned sheet steel, and are re-tinned after being shaped. This adds largely to their lasting qualities.

ALL DIETZ LANTERNS are SAFE and RELIABLE.

Where a Dash Lantern is required, giving a large light, these are unequalled.

For sale by
**ALL LIVE JOBBERS.**

If you handle Lanterns send to us for a catalogue and to your jobber for prices.

### Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00. Write for Discounts to Trade.

## THE O K LAWN TRIMMER.

SIMPLE, DURABLE, EASY TO OPERATE.

The O K Lawn Trimmer is the only practical implement of its kind, and is needed by every one who has a Lawn or Stone and Cement Walks. It cuts out a V shaped strip of sod along the walks which can be taken up like a piece of rope, leaving no dirt, as it cuts the sod without tearing it. A lawn requiring several hours hard work by the old method can be trimmed with the O K Lawn Trimmer in a few minutes. The blade, or cutting part, is stamped out of steel, and the handle is of hard wood, making a nice appearing as well as an indestructible implement.

### "GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think **HARDWARE** is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

#### FOUR EDITIONS:

A, 200 pages, - - \$1.00 A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

#### FOUR EDITIONS:

B, 200 pages, - - \$1.00 B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 8 inches.*

#### FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, - - 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches*

#### FOUR EDITIONS:

D, 240 pages, - - \$1.50  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**  
" Parers, Apple " **PA**

For Chisels, turn to **CH**  
" Cutlery, " **CUT**

For Iron, turn to **IRO**  
" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

Price Book E—350 pages, 7 1/4 x 10 inches, canvas tab indexing. Price, \$5.00.

# HARDWARE

The Ervin Machine and Stamping Co., who are the successors to the Forest City Stamping Co., have moved into a new brick building on Michigan Street, Cleveland. The new shop is being fitted for the manufacture of Hardware specialties and sheet metal presses. J. M. Ervin is manager of the new firm.

The Kirk-Latty Mfg. Co., Cleveland, O., are about to let contract for the erection of another story to a portion of their present factory. This will give them an addition to their floor space of 275 x 50 feet. At the same time they contemplate extensive improvements of their office facilities, greatly enlarging its present area. Their volume of business increasing monthly makes these changes necessary.

By a recent decision made by the highest tribunal in Great Britain it has been adjudged that a trades union, whether registered or unregistered, is a corporation that can be sued, and its funds made responsible for wrongs inflicted by it or its agents. If sustained and acted on this means much to the labor unions of that country, where industrial organization is complete and thorough. It will certainly promote caution and perhaps prevent some of the wild and reckless labor reprisals. It is also made evident that an organization that can be sued has the right to sue, litigation being accessible to both parties. The decision is, however, important and momentous, and is likely to find many supporters in other countries than Great Britain.

The shipments of wire and wire nails made from Eastern ports during the month of July aggregated nearly 5,000 tons, an increase of 40 per cent over the shipments during June. South America continues to be the principal purchaser of wire, twenty-two consignments going to South American ports, amounting to about 2,000 tons. Australia also figured as a large purchaser of wire, nearly 1,000 tons going to her ports. The shipments to Great Britain amounted to nearly 700 tons.

The J. Stevens Arms and Tool Co., of Chicopee Falls, Mass., are offering to distribute the sum of \$500 to the sixty young persons sending them before October 1 the sixty best targets made with Stevens rifles. The prizes range from \$50 to \$5. Send them 10 cents in stamps and state the calibre of your rifle and they will mail twelve official targets and conditions of the contest.

The Harrington & Richardson Arms Co., Worcester, Mass., are building a large addition to its plant on Park Avenue. The principal purpose of the new building is to give additional storage capacity, which is demanded because the company have added shot guns to its product, which had previously been confined to revolvers.

We learn from Secretary-Treasurer Fernley that elaborate preparations are being made for the approaching Convention in Cleveland, October 9th, 10th and 11th, of the National Hardware Association of the United States. It is on the programme that immediately after the adjournment of the Convention it will be prepared to visit the Pan American Exposition in Buffalo. Arrangements in the meantime will be made for the large number of delegates in that city, in one or two hotels near the Exposition grounds. These hotels have not as yet been selected, but the matter is under consideration, and they will be found deserving of the patronage it is intended to bestow upon them.

The publishers of the *Nassau Guardian* have issued an "Almanac for 1901 with a Guide to the Bahamas," making a neat little pamphlet of over 100 pages. It contains the customs tariffs of the islands, together with a historical sketch of the colony and descriptions of its climate, products, etc. It also has a classified directory of the principal business houses of the island. Copies can be obtained from the office of the *Nassau Guardian*, Nassau, New Providence.

The H. B. Ives Co., of New Haven, Conn., have purchased the letters patent, business and good will of the Champion Safety Lock and Novelty Co., of Cleveland, O., so far as they pertain and relate to the Royal Sash Locks, formerly one of their specialties.

Pig-iron production in the first half of the current year amounted to 7,674,613 gross tons of 2,240 pounds. This total is the result of the completed statistics given out by the American Iron and Steel Association. There was an increase of only 32,044 tons over the production for the first half of last year, but a gain of 1,527,940 tons over the output for the second half.

F. E. Myers & Bro., the progressive manufacturers of Pumps, Hay Tools, Store Ladders, and other important specialties, gave their numerous employees a picnic on the 10th inst. It was the initial proceeding of the kind in which they had been interested, but proved so great a success, and provided so much solid enjoyment to those who were present, it is contemplated to establish it as an annual feature hereafter. The picnic took place at Chippewa Lake, and the employees, with their sweethearts and wives, required seventeen cars to transport them to the festive scene. While the company's working force numbers but about 400, it is calculated that nearly 1,000 people participated in the hospitality of the occasion.

The Janesville Hay Tool Co., which has been located for a long time at Janesville, Wis., are compelled by the great increase in their business to seek a more central location, and have removed their principal office to Chicago, where it will be located at 122 Lake Street. The removal has been in order to secure improved shipping facilities, and as many of the principal owners of the company live in Chicago, it was calculated that it would tend to the concentration of their business interests in making the change. This well-known company are pioneers in the manufacture of appliances used in hay handling and carrying, their business in this line having been a most successful one from the start. No year in their history has reached the proportion of the one just passed, which was so greatly in advance as to make this change a very desirable one.

W. H. Crosier will open a Hardware store at Hall's Corners, N. Y., some time during September, and will be pleased to receive from manufacturers and others any circulars or catalogues that would assist him in the selection of his stock.

The American Bicycle Co., of Toledo, O., quite recently shipped three high power steam automobiles to Cape Town, South Africa. It is a matter for pride to know they were ordered by the British government for use of army officers stationed in the colonies. It is not supposable that they would have been selected had they not been judged comparable with the machines of France and Germany.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

The demand for goods is very active, the previous indications for an unusually good Fall trade holding up admirably. This, coupled with a feeling that goods may be in scant supply, has made early orders from the retailers a certainty. The limited supply of regular goods so far has been confined to heavy Hardware, where the material needed is nearer the iron and steel raw products, and over the making of which the force of the strike is more severely felt; such goods as sheet iron and steel, light hoops and bands, tin plates, etc., are in extremely scant supply even at the present time, and all within reach are held at advanced quotations. Goods in the production of which such supplies are needed, will feel the effect of the stringent conditions engendered by the strike, and be difficult to obtain for some time to come, unless some change comes over the spirit of the strikers' "pipe" dream, which it is the general impression will not be long delayed. The strike is being felt in many channels of traffic, but still the trade of the month in a general way has been fully as heavy as the preceeding month, which was an unusually good one.

With the entire trade hustling the manufacturers for all they are worth, and the manufacturers hustling the mills for deliveries on orders, in some cases given months ago, the "trials of the trade" would form the basis of a big book. It will not be long before ordinary staples, like Wire Nails and other wire specialties will give cause for speculation as to "when they may be expected to arrive" and then trouble enough will confront the anxious buyer.

Prices on staple products in the line of Hardware, have

not been advanced to any greater extent than a more rigid set of quotations, and closer conditions of sale. Of course, unless the first of September brings with it some manifestations of an early settlement in the field of labor, it is going to embarrass the manufacturers in doing the just thing to all concerned by either naming higher prices for a limited output, or declining to name specified dates of delivery.

The dealers in the section of the country where crops were most largely damaged, are reported as buying with no fear of the crop conditions having any tendency to stifle trade. They realize the farming community are in good financial condition, and even if they should meet with a single reverse, it is not going to cripple their purchasing seriously.

Collections are considered fair for the season. Our Philadelphia correspondent calls attention to the constant temptation to expansion of credit by dealers when surrounded by good times, so that later, when their consuming customers are deprived of employment, and a hardening of easy conditions naturally ensues, it creates a financial stringency difficult to provide for bringing trouble enough in its wake.

## Our Commerce With Germany.

Recent discussions regarding the commerce between the United States and Germany lend especial interest to some figures just presented by the Treasury Bureau of Statistics, which show the growth of commerce between the two countries in the last thirty years, and in detail during the last ten years. These figures show that imports into the United States from Germany have increased from \$27,000,000 in 1870 to \$100,000,000 in 1901, and that exports from the United States to that country have increased from \$42,000,000 in 1870 to \$191,000,000 in 1901—an increase of nearly 300 per cent. in imports from Germany and of nearly 400 per cent. in exports to Germany.

On the export side, the greatest growth has been during the last five years, in which time our exports to Germany have doubled, being in 1896, \$97,897,197, and in 1901, \$191,072,252. This growth is distributed among a large number of articles. Comparing our exports to Germany in 1895 with those of 1901, corn has increased from \$1,672,539 in 1895 to \$17,305,229 in 1901; wheat, from \$1,522,736 to \$7,871,573; lard, from \$8,018,516, to \$13,700,875; oil cake and oil cake meal, from \$2,339,885, to \$5,242,634; flour, from \$740,264 to \$2,011,259; agricultural implements, from \$556,914, to \$2,677,319; and copper, from \$1,604,390 in 1895 to \$7,785,496 in 1901. Machinery of all kinds, including steam engines, increased from \$1,595,135 in 1895 to \$8,109,095 in 1900, the figures for 1901 in this item being not yet available.

On the import side, the articles which show the greatest growth during the last decade are coal tar colors and dyes, chemicals, laces and embroideries, earthen, stone and chinaware, and sugar. Coal tar colors and dyes have increased from \$1,272,275 in 1891 to \$3,822,162 in 1900; other chemicals, from \$1,868,988 to \$3,968,116; laces and embroideries, from \$945,186 to \$2,402,372; earthen, stone and chinaware, from \$1,475,057 to \$2,787,163, and sugar, from \$7,209,150 to \$12,346,734.

An examination of the statistics issued by the German Government shows that articles from the United States formed, in 1891, 10.4 per cent. of her total imports for consumption, while in 1900 they formed 16.9 per cent. Of her exports, those to the United States in 1891 formed 10.7 per cent. of the total, and in 1900, 9.3 per cent.

The tables which follow show (1) the exports of principal articles from the United States to Germany in 1891, 1895 and 1901; and (2) our imports from, and exports to, Germany from 1870 to 1901:

## Death of W. K. Ross.

William Kenneth Ross, well known to the Hardware men of the United States, died in Montreal Thursday morning, August 8th, of an affection of the heart from which he had been ailing for the past year and a half. He had been under the necessity of remaining most of the time in Montreal with his brother, Dr. George T. Ross, still conducting his business, and yet calmly awaiting death. He was buried from the home of his brother on August 10th.

W. K. Ross was born in Ayrshire, Scotland, and was a son of the late Kenneth Ross, a railroad contractor. He came out with his parents to this country, settling in Hamilton, Canada, where, as his first business venture he became connected with the retail Hardware trade in that city. Finally relinquishing it, he became the representative of the firm of Hardware manufacturers' agents, Lane, Gale & Co., Troy, New York, with whom he was associated for a number of years. He subsequently formed a partnership with Fuller Bros., New York, doing business as The Ross & Fuller Association, New York and Chicago, and continued as the senior of that firm for nearly twenty-five years. He was a most active business man, and one held in the highest esteem by all with whom he had business relations. Being possessed of a magnificent physique and a strong personality, he was noted for the noblest characteristics possible to an energetic salesman, representing, as he did, so many first-class manufacturers during the number of years that he was actively employed. Among the names of those represented by him may be mentioned Henry Disston & Sons, Stanley Works, being the sole representative of these two important concerns in Canada; American Axe and Tool Co., Standard Tool Co., The Malin Co., J. M. King & Co., Hay-Budden Mfg. Co., Eagle Square Mfg. Co., New York Wire Cloth Co.,

Holroyd & Co., William Wilcox Mfg. Co., Owosso Mfg. Co., Lawrence Cordage Works, as well as a number of others. He traveled from the Atlantic to the far Western States, representing the largest houses and most important manufacturers on both heavy and shelf Hardware, and as it was his proudest boast that every customer he had was a personal friend, they will sadly miss his genial presence. Some twelve years ago his business had so greatly extended that he found it necessary to establish a branch in Chicago, where he could be nearer to the large consuming centers. He opened an

W. K. ROSS.

office in the Pullman Building, which became his headquarters, the New York business being left under the control of his partners, the Messrs. Fuller.

He had long recognized his malady as an incurable one, having consulted the best medical talent obtainable, not only in New York, but also in Chicago and Montreal. No man who ever enjoyed his friendship and knew how companionable, great-hearted and gentlemanly in every sense he was will ever forget the magnetic individuality and sterling integrity which were his most prominent characteristics.

## The Consolidation of the Shovel Manufacturers.

An incorporation has been made of a number of prominent shovel manufacturers under the title The Ames Tool and Shovel Co., which will have a capital stock of five millions of dollars. This combination has been in contemplation for a long time, but from some cause or other, the details have only recently been perfected. The Companies forming the combination will consist of The Oliver Ames & Sons Corporation, North Easton, Mass.; T. Rowland's Sons Co., Philadelphia, Pa.; the H. H. Myers Co., Beaver Falls, Pa.; Wright Shovel Co., Anderson, Ind., and the St. Louis Shovel Co., St. Louis, Mo., the most important concern in the list being the one first mentioned, which employs more than a thousand men, while the other concerns number their workmen by the hundreds. There is no expectation that the new Company will control the shovel output of the country. It is intended that it shall embrace a number of the largest producers and, to a great extent, lessen competition among themselves, and by their associating in this manner they will be in a position to purchase other plants as may be deemed desirable. It is on record, however, that during the last two years a number of independent plants have been established and others are in course of construction, so that, from the conditions already ascertained, it is not feared that overproduction will result, the demand keeping constant pace

with the supply. The plant at Beaver Falls, it is a well-known fact, has been kept running night and day for some time past, and employing between three hundred and four hundred men.

The organization of the Company, if not already perfected, will be in a few days, and the constituent plants, it is presumed, will all be represented in the directory. The Ames Shovel Works, whose absorption by the syndicate is reported, has had a remarkable history. Its success has been commented upon throughout the world. Its plant is to-day the largest of its kind in existence.

The company was founded by Hon. Oliver Ames, who was born in West Bridgewater, April 17, 1779. Soon after his marriage in 1803, Mr. Ames began to make shovels and hoes in North Easton, and for a while took his product to Boston for sale. He did not meet with success at the outset and gave away a number of shovels to Dorchester farmers along the wagon route he traveled to market, saying that some day the tradesmen who turned him down would regard it a privilege to purchase American-made shovels. At that time they used shovels made in England.

Mr. Ames was not discouraged by the seeming lack of interest of the shopkeepers in his shovels, and not long afterward found himself overrun with orders, some of which came from the very ones who at first would not purchase of him.

Upon the death of Mr. Ames the business was managed by Oakes Angier Ames, and on his death a few years ago Hobart Ames became president of the company and now holds that position.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

### Promissory Notes, Agreement as to Whole Debt Becoming Due on Default of One Installment.

**QUESTION:** A man has owed me several hundred dollars for some time, but has been unable to pay. Recently he became a member of a very prosperous firm. He has agreed to give me ten promissory notes indorsed by his firm in settlement of our account. If one of these notes falls due and is not paid, can I sue at once and collect the full amount of indebtedness?

**REPLY:** You cannot sue upon the notes which are not due, unless you had an agreement with the maker that on default in the payment of any one installment the whole of the sum remaining unpaid should at once become due. When a number of promissory notes are given, falling due at different periods, it is always well to take an agreement from the maker that if default in the payment of one note is made all the other notes shall become immediately due and owing. In this way, after a default has occurred, you are not obliged to wait until the other notes fall due, but you may sue at once.

### Insurance Policy, Beneficiary and Collection of.

**QUESTION:** Some time ago I took out an insurance policy upon my life and made the policy payable to my personal representatives or assigns. Kindly inform me how this policy would have to be collected if at my death I had not assigned my policy; and also where the beneficiary of an insurance policy is the personal representative of the deceased, can creditors of the deceased reach the insurance policy? If the creditors can reach a policy of this kind, I should like to know how I can prevent them from reaching it, as I intended this insurance for the support of my wife and children.

**REPLY:** Where an insurance policy is made payable to the insured or his representatives or assignees, at his death only the executor or administrator of the deceased can collect the policy if the policy was not assigned. Proofs of death must, of course, be prepared and submitted to the insurance company within a certain period, together with proof of the appointment of an administrator, or, if the deceased left a

will, proof that the executor therein named has duly qualified as such. A policy made payable to the personal representatives of a deceased belongs to and is the property of the estate. The creditors can therefore reach the proceeds of any policy made payable in this way. If it is your wish that only your wife and children should receive the benefit of this policy, you may assign the policy to your wife with the knowledge and consent of the Company. If this is done, at your death the policy would become the property of your wife, and creditors of yours could not reach it.

### Inheritance Tax—Direct and Indirect.

**QUESTION:** I own considerable real and personal property and at my death I desire it to go intact to my only son. I have no other relatives and my son would take all my property at my death even if I made no will leaving it to him. I should like to be informed whether any of this property will be subject to any tax, and if so what is the amount of the tax? I should like to know whether there is any way to avoid it?

**REPLY:** Under the inheritance tax law of New York State a tax of one per cent. is levied upon the transfer of the personal property of a decedent if his entire personal estate shall amount to \$10,000 or over. This is called the "direct" transfer tax because it is the tax which applies to the direct descendants of a deceased, or roughly speaking, to persons not more remotely related to the deceased than nephews and nieces. This tax is levied only on the personal property of the deceased and if the decedent's real property is willed to or goes by descent to persons nearly related to the deceased, it is not the subject of taxation under this law. The indirect tax, however, applies to both real and personal property, and is a tax of five per cent. upon every estate of the value of \$500 or over. Formerly this indirect tax could be avoided by making legacies of \$499 or any less sum than \$500, but this can no longer be done. Many people owning much property which would be subject to a very heavy tax, prefer to deed their property directly to the person to whom they wish to give it. If they do this so that it does not appear that the deed was executed in contemplation of death, the tax will be avoided. It must be remembered, however, that if this step is taken the donor loses entire control of his property from the day he delivers the deed, a deed being unlike a will, which may be changed and altered at the pleasure of the testator.

### Dissolution of Corporation—Appearance in Proceeding by Creditor.

**QUESTION:** I am a creditor of a corporation which has recently filed a petition for its voluntary dissolution. The corporation owes me about \$500, and the directors are an unreliable set of men who have contracted debts on the part of the corporation and now are trying to evade them by voluntarily dissolving the corporation. Kindly inform me what I should do.

**REPLY:** If you have been served with any papers in this proceeding, your first step should be to consult a lawyer and have him file a notice of appearance with the clerk of the Court in which the proceeding is pending. If this is done, the directors who are dissolving the corporation will be obliged to give you or your attorney notice of any and all proceedings which they may take. It is possible that you might be able to prevent the dissolution of the corporation if fraud on the part of the directors could be shown and it could be proved that the corporation was in reality solvent.

### Sargent & Co.'s New Catalogue.

Sargent & Co., New Haven, Conn., and New York, have just issued from the press and are now distributing to the trade their new catalogue, under date of 1901. It is certainly a fine specimen of catalogue construction, a class of book making for commercial purposes worthy of the conscientious catalogue department from which it emanates. No better idea of the difference between "compiling" and "constructing" a catalogue can be shown than in the compactly arranged pages filled with necessary information which are in evidence in the division covering the Locks, Knobs and Trimmings, this department alone filling 140 pages of this portly volume. It is a catalogue to be waited for and welcomed by the trade, among whom it is distributed, and one which will be fully appreciated for its completeness, its skilfully arranged pages and its typographical and artistically illustrated contents.

The catalogue forms a well-proportioned book of 1,050 pages including indexes. It is paged nominally as containing 1,269 pages, but through a re-arrangement of its contents, the folios from 281 to 500 are omitted, the book being complete in every essential particular without them. A view of the extensive plant of Sargent & Co., at New Haven, Conn., forms a frontispiece to the volume. Following this comes the Alphabetical Index, in which the articles are cross-indexed in a manner which makes a single reference sufficient to find any of its contents. This index covering 15 pages is followed by a numerical index of 17 pages to the General Hardware, referring to every page where a given number of an article may be found, and comprising in its scope all the goods manufactured by Sargent & Co., in New Haven, except Locks and Lock Trimmings.

The illustrations showing hand of locks are unique, the manner of doing so being original. The Lock is shown as it is in reality so any one may recognize it, and the door to which it is applied is embodied in the illustration of Lock to show how to use it, the door being shown half open.

There are few things that indicate more thoroughly the changed conditions surrounding the selling of Builders' Hardware than to look over the 140 pages devoted to a description and illustration of Locks that are now sold in sets with the furniture all complete to deliver, this, on special designs, applying not alone to Front and Vestibule Doors, but inside and sliding door Locks, with drop handles and flush lifts to match, and on some of the more important designs shows oval or round knobs, Front door Locks with and without cylinder work, and all such miscellaneous trim as Push Buttons, Extension Bolts, Door Pulls, Letter Box Plates, Drop Handles and Drawer Pulls, Flush Sash Lifts, Sash Pull Plates, Shutter Bars and Corner and Centre Hinge Plates, illustrating all in the same design throughout, in the most artistic manner, enabling the conceptions of the architects to find a proper development in harmony with the general design of the building under construction.

In this division of 140 pages the more important patterns take two pages to give adequate description, in which nine to seventeen miniature illustrations in artistic perfection are used to show the various articles at a glance made in any single design. List prices are given covering the numerous finishes described in the catalogue; and in such places where miniature cuts are used, care is taken to give full measurements for each article.

Even the ordinary styles of Rim and Mortise Locks can now be purchased, put up in sets complete with appropriate trim, reaching the retail dealer three sets in a box, so they may be handed to a consumer with no detail unaccounted for. Special information regarding Locks is given on each page where cut is shown, in a condensed form readily understood.

There is no catalogue placed before the trade in which such great precautions are taken to have it preserve its integrity during a commercial life time. In binding alone a comparison may safely be made with other catalogues with great advantage to this. The cover is of green cloth, stamped with

a design in gold of pleasing appearance both on side and back; the leather back is in three panels forming a heavy leather beveled spring back with stiff sides, the back of the book proper inside the covers being protected by a stiff guard which enables the volume to be opened out flat without the fear of a break of a single stitch. A fine super paper is used throughout in order to bring out the delicate lines of the handsome illustrations. For the part most used for reference purposes, the Indexes, and Finish and Design Pages, a three times heavier paper is used in order that the wear and tear will be imperceptible, and the types used throughout the volume show a care in selection and use, indicating the benefit of a long experience in this class of work. The catalogue, it is understood, is being included with current shipments made to customers.

### Norwalk Lock Works Closed.

As the result of action taken at a special meeting of the stockholders of the Norwalk Lock Works, the entire plant was closed recently, and will probably remain closed until a complete reorganization is made. The Lock shop has been for many years one of the largest plants in Norwalk, Conn., the company having employed between two and three hundred hands, with facilities for employing double that many. The company was organized in 1856. Its life before and during the war was but ordinary, but with the boom at the close of the Rebellion the company went to the front. In the years 1866 and 1867 the capital stock of the company was twice doubled, and the plant has paid as high as 45 per cent. dividends. Subsequently the plant was enlarged in many respects, and made more complete in every department, until it really assumed a leading position among the lock plants of the United States, its specialty having been the best grade of locks, for the manufacture of which the name of the company was well recognized. Of late years it has failed to keep up with the modern character of the lock industry of the present time, the grade of goods more largely represented by its production being a class that was subject to the greatest competition, and the works were constantly run at a disadvantage, and unable to show any profit, the bulk of the goods for the trade in which they competed not being of the highest class. The present temporary and voluntary suspension is regarded by those who are immediately concerned as not likely to extend to any great length of time. No doubt some method will be discovered by which under a reorganization of the present affairs a more profitable future is before this old established concern.

### A Good Idea.

The postoffice department announces that to facilitate the correct issue of postal money orders, and to further improve its money order service, it has introduced, for distribution by business firms to their patrons, and for the convenience of those who have occasion to remit to such firms, special forms of applications for money orders, in which the name and address of the payee are conspicuously printed in red ink. The department will furnish such forms free of cost, and will cause them to be sent to any applicant, in such reasonable quantity as may be desired, upon request made therefor through the postmaster at any money order office. It has already become the practice of many large advertisers, insurance companies, publishers, seedsmen, etc., to inclose one of these application forms with each bill, catalogue, invoice, prospectus, etc., issued by them; and the results are said to show that the method commends itself to a large class of persons who make purchases by means of mail orders, and who have been in the habit of paying therefor in postage stamps or in coin or notes sent in the open mail. These application blanks will be printed with the directions printed in any foreign language. The department is sending out a circular showing how the blank looks when so printed—also in red.—*Printers Ink.*

### National Sweeper Co.'s Specialties.

The line that attracted universal attention at the recent furniture exhibition, held at Grand Rapids, Michigan, was that of Carpet Sweepers and Clothes Wringers manufactured by the National Sweeper Co., Marion, Indiana. This Company is certainly to be commended for the attractive manner in which it displayed its goods. The display was tastefully and conveniently arranged, so that a thorough inspection of each Sweeper could be readily and easily made, and the "National Sweeper" booth was headquarters for those buyers at all interested in Carpet Sweepers or Clothes Wringers.

This firm has had its goods on the market for the short period of eight months, and to those who are not acquainted with the facts, it is surprising the rapid strides they are mak-

On the right of the accompanying cut is shown one of the new posters just issued by this Company; it is a handsome piece of work, being printed in fourteen different colors, and as it is absolutely free to all dealers we would suggest that those handling Carpet Sweepers write for one whether they are handling the National's goods or not.

The line of Wringers made by this Company should not be overlooked by those who deal in this class of goods; they have a full line and are making prices that are very attractive. It would be well for those dealers who have not seen the "National" line of Carpet Sweepers or Clothes Wringers to write for this Company's booklets; they issue one for their Sweeper department and one for their Wringer department, and they are very complete and will enable you to gain a very fair idea of the goods.

ing. In the history of the manufacture of Carpet Sweepers no such display of finishes was ever shown, there being thirty-six different and distinct finishes displayed. The line consists of all sizes, from the smallest Toy Sweepers to the largest size for public hall and hotel use. They have just perfected and placed on the market a new model, which is known as the "Marion Queen;" this is made of the finest of veneers—mahogany, bird's-eye maple, curly birch, burlled ash, etc., and is finished as highly as the finest piece of furniture made. This Sweeper will be fitted with their new "Roller Bearings," which are described in another column of this issue.

The National Sweeper Company is "down to the minute" with its goods and its methods of selling. Another of its recent innovations is the method of packing each Sweeper in a separate cardboard box. Although this adds considerable to the expense of packing, they claim they are more than repaid, as it enables them to send their goods out without packing them in excelsior and the Sweepers arrive at destination in much better condition. It also makes a cleaner shipment for the dealer, who has no rubbish to clean up after opening up the case, and the Sweepers can be transferred right from the packing box to the shelves, and are not only much more convenient to handle but can be sent out to their customers without any additional wrapping. Without a doubt, dealers will appreciate this.

### D. Dorendorf.

D. Dorendorf, successor to C. H. Lilly, 44 Centre Street, New York, whose advertisement will be found in another column of this issue, is engaged in a line of business to which the attention of the Hardware trade is deservedly called. He is a manufacturer of copper weather vanes, long ladders, scaffolding for buildings and clothes poles for tenements; supplies lightning rods, erects flags and flag poles without special limit as to size.

Among the erections with which Mr. Dorendorf's name is associated may be mentioned the following: The flag pole on the Produce Exchange tower and copper cable lightning conductors connected therewith, which are probably the largest in the world; the vane on the Post Office, New York, was manufactured by him, and considered to be the largest in the United States; also the vane on the Grand Central Depot, 42d Street. He erected the large pole and weather vane that is on the Metropolitan Life Insurance Co.'s new building. Possessing facilities for the furtherance of work of this character he solicits correspondence with the Hardware trade whenever he can be of assistance.

He (watching another couple)—He is—er—somewhat older than she. Is he wealthy?

She—Very likely. I presume she didn't marry him just on account of his age!

## CONSULAR COMMERCIAL COMMENTS.

### SUGGESTIONS FOR EXPORTS OF IRONWARE AND MACHINERY.

The following suggestions for export of ironware and machinery were taken from trade papers and reports published in the interests of German exporters, and may be of value to our manufacturers:

#### STOVES IN BULGARIA.

Iron stoves, as reported by the Commercial Museum of Bulgaria, are coming in use more and more, having driven out of the market the tin-plated stoves, which used to be in great favor. Germany was the first country largely controlling that market, but has lately experienced formidable competition from Belgium and England.

#### AGRICULTURAL MACHINES IN RUSSIA, EGYPT, ALGERIA AND AUSTRALIA.

The St. Petersburg Commercial and Industrial Gazette calls attention to the "Zemstvo's" direct purchase of agricultural implements and machinery. This institution, a combination of agricultural interests, sends out representatives to buy machinery in large quantities, and it would be advisable to seek direct connection therewith.

As to Russia's import of tools, Germany furnishes the cheaper and medium grades, while the best qualities come from France and England. Pitchforks, spades, etc., are very rarely imported, although home industry is not able to supply the market to its full extent.

A British consular report from Alexandria says that, with the great progress made in cultivating farming land in Egypt, a greater demand for agricultural implements is to be expected.

Farmers are finding out the advantages of improved farm machinery, having in use already a number of thrashing machines.

The increase in the import of agricultural implements into Algeria is due to the large number of settlers emigrating to that country, and the French are making great efforts to drive America and England out of the market in this line.

Manufacturers desirous of selling their agricultural machines to Australia are recommended to follow the examples of Americans—having their machines set up and tried by a representative. English firms are beginning to adopt this method. Soils in Australia differ greatly, so that machines very useful in one region are altogether unserviceable in another.

#### IRONWARE IN ABYSSINIA.

Among the ironware used in Abyssinia, the British consul describes pans, diameter of 1 to 3 feet, about 4,000 being imported during the year, at a cost of 3 to 9 marks (71 cents to \$2.14) each. These are mostly furnished by India and Germany. Other articles imported comprise files, nails, penknives, padlocks, screws, saws—all together to the value of about 15,000 marks (\$3,570).

#### CUTLERY IN MOZAMBIQUE.

The British consul at Mozambique reports that Germany supplies the country with cutlery, England not being able to furnish as durable goods at the same prices. The natives care less for the appearance than for durability.

MAX BOUCHSEIN, Consul.

BARMEN, May 15, 1901.

#### CONGRESS OF HISTORICAL SCIENCES AT ROME.

The Department has received a note from the secretary of the Italian embassy, Mr. Carignani, dated Washington, July 24, 1901, in regard to the International Congress of Historical

Sciences to be held in Rome in the spring of 1902. The promoting committee asks that the Government of the United States send delegates to the congress and invites the participation of American scientists, artists, and men of letters. The congress will include all subjects of an historical character. The principal sections will be the following:

(1) Classical archæology; (2) numismatics; (3) history of oriental and classical antiquity; (4) history of ancient literature; (5) history of ancient law; (6) mediæval and modern, general and diplomatic history—diplomatic and archivist science; (7) history and mediæval and modern literature; (8) history of mediæval and modern art; (9) history of modern law; (10) history of economical and social science; (11) history of philosophy and of pedagogy; (12) history of religion; (13) history of geographic exploration and discovery—historical geography; (14) history of mathematical, physical, natural and mediæval science; (15) history of musical and dramatic art; (16) teaching of history.

The programme of exercises has not yet been definitely decided; suggestions for themes will be received until January, 1902. Persons desirous of taking part in the congress will send their names either to the president of the executive committee or to the general secretary, via dei Greci n. 18, Roma, with the membership fee of 12 lire (\$2.32), indicating the section in which they wish to be inscribed.

#### AMERICAN MANUFACTURES IN CAPE COLONY.

To make a list of all the articles of American manufacture sent here during the last four years would occupy many pages. They have, in the great majority of cases, been found efficient and durable. "That is another handy American trick," is a common saying. We cannot enter a home but what is seen some greatly appreciated American-made articles. Our kitchen ware and furniture adorn many a home. The natives are astounded when they see light, strong, and efficient American agricultural implements at work in the field. The American organ is a frequent sight, and scholars sit in the schools at neat and comfortable desks "made in America." American pews in the churches make poor services less tedious. The old and heavy English knives and axes are passing away and the American hatchets and scientific axes are cutting the kindling wood for the home and hewing down the forests. Where six yoke of oxen were once seen pulling an 8-inch plow, our American plows with one yoke now do the work, and the day is fast disappearing when it takes from six to eight yoke to draw a wagon; one American wagon, carrying the same load, can be drawn with two yoke, or a good team of horses. Imitation American products are ever present, but there is always something about them, some little addition or change, that discloses their origin.

The railroads are owned by the Government and were of great assistance during the war, although the destruction of lines and rolling stock has been considerable. In 1900, £942,709 were expended for engines, cars, new works and for relaying the roads with 60-pound steel rails, in all of which the United States had a share. The railways are well conducted and every year pay a goodly revenue to the Government. Over 40,000 tons of coal, mostly colonial, are consumed monthly.

Cape Town, July 5, 1901.

JAMES G. STOWE,  
Consul-General.

Clerk—"What do you wish, ma'am?"

Mrs. O'Toole—"Oi want to sae some mirrors."

Clerk—"Hand mirrors?"

Mrs. O'Toole—"No; some thot ye kin sae ye'er face in.

## PATENTS.

The following list of Patents, Trade Marks and Designs of interest to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

## Patents Expired August 5, 1901.

## PATENTS EXPIRED AUG. 5TH, 1901.

- 302,896 ROOF-BRACKET, E. W. Daily, West Berlin, Mass.
- 302,902. SAW-SET, H. Flater, Findlay, O., assignor of one-half to G. R. Marvin, same place.
- 302,929. HANDLES FOR COVERS OF VESSELS, J. Musgrave, Norwich, Conn.
- 302,984. GATE-HINGE, A. B. Clark, Richmond, Ind.
- 303,003. SCREW-DRIVER, G. W. Hael, Minneapolis, Minn.
- 303,015. LIFTING-JACK, Gardner Hunting, Jr., E. Hampden, Me.
- 303,031. BENCH HOOK, J. McVane, Boston, Mass.
- 303,067. BOLT AND RIVET CLIPPER, J. W. Stokes, Syracuse, N. Y.
- 303,138. BOW-SAW, C. Ensminger, Albany, assignor of one-half to B. F. Eaton, Coxsackie, N. Y.
- 303,230. HAMMER FOR HOLDING AND DRIVING TACKS, ETC., J. W. Niebel, Tiffin, O.

## PATENTS ISSUED AUG. 6TH, 1901.

- 679,719. ROOFING SEAMER, W. C. Bell, Syracuse, N. Y.
- 679,920. RADIATOR, A. Stadel, Jersey City, N. J.
- 680,016. SHUT OFF NOZZLE FOR FIREMEN'S HOSE, J. M. Baker, Providence, R. I.
- 680,021. MITER BOX, A. L. Chandler, Chicago, Ill.
- 680,055 and 680,056. PLANE, E. S. Marks, Auburn, N. Y., assignor to Ohio Tool Co., of New York.
- 680,065. SCREW DRIVER OR KINDRED TOOL, B. T. Noble, Southington, Conn.

## PATENTS EXPIRED AUG. 12TH, 1901.

- 303,299. BENCH VISE, Mortimer G. Lewis, Lowville, N. Y.
- 303,319. GAS BURNER, C. Pietz, New York, N. Y.
- 303,338. BENCH-PLANE, J. F. Taber and W. F. Gibbs, Clarion, Iowa.
- 303,345. VISE ATTACHMENT, W. Vanderman, Willimantic, Conn.
- 303,380. HYDRANT, John Richardson, New York, N. Y.
- 303,414. SASH-FASTENER, J. Y. Bassell, Cincinnati, O., assignor to Attwell Mfg. Co., Covington, Ky.
- 303,435. DOOR-KNOB, Edwin Alfred Johnston, Allegheny City Pa.
- 303,467. FASTENER FOR KNOB-SPINDLES, Le Grand Terry, Horseheads, N. Y.

## PATENTS ISSUED AUG. 13TH, 1901.

- 680,216. SAD-IRON, Arthur T. Beach, Brooklyn, N. Y.
- 680,230 and 680,231. LUMBER-JACK, N. R. Deppe, Maysville, N. C.
- 680,279. WASHTUB WITH WRINGER ATTACHMENT, S. Richman, New York, N. Y., assignor to National Enameling and Stamping Co., same place.
- 680,298. LATCH, A. B. Vane, London, England.
- 680,300. SPIKE EXTRACTOR, E. E. Welsh, Lawrence, Kan.
- 680,367. FLAT IRON, T. D. Stewart, Chicago, Ill, assignor by mesne assignments to Ryder Mfg. Co., Binghamton, N. Y.

## A Good Employer.

Much has been said and written about what are the qualifications and characteristics of a good clerk, says *Hardware Trade*, and it is a subject of vital importance to the average retailer and his customers. But why not turn the tables for once, and inquire, in the interest of the clerks, what constitutes the best kind of an employer. One thing is certain, the character, habits, personal characteristics and general methods of any merchant will have much to do with the style

and conducts of his clerks, and this is especially applicable to young persons who are serving their first engagement in the store.

The employer should be consciously imperfect, liable to commit some errors, not simply blunders or common mistakes, but errors in judgment. Deliver me from the employer who is always right, and considers he can never be wrong in any way whatever. Or what is equally as disagreeable, let me have no service to do for him who, when he knows he is in the wrong, is too proud to acknowledge it. If a clerk should be honest to his employer, the latter should be honest with himself and his clerk as well. We have invariably found it true that the man who is generally right is the most willing to acknowledge his own mistakes; that the one who is conscious of some imperfections, is more charitable toward the unintentional failures of his employees, and the merchant who prides himself on his own infallibility is unjust with himself and unfair to his clerks.

I want an employer who has a good memory, who can remember not only what he has ordered done, but what he has failed to tell or instruct in. How often we have wished that people could remember their own shortcomings, so as to treat others with more leniency. The employer should have a memory going back to earlier days, when he was a clerk and subject to another's orders and criticisms. This kind of a memory has a great effect to sooth the temper when unpleasant incidents and accidents occur, and promote a very healthy amiability.

The employer should carry on his business so squarely with the public, as to have nothing to conceal from his clerks or to ask them to conceal from customers. If the clerks are to represent him with buyers, they must be posted and kept in their employer's confidence. They cannot be expected to learn without instruction, or to read the mind of experienced persons by simply being in their company. The right kind of an employer will talk business a great deal with his help, using the pronoun "we" on all possible occasions.

One thing more, the employer should take it for granted that his clerks wish to do what is right towards him and his patrons. If he cannot feel this way toward any one in his employ, he had better fill the place with some one else. A man's feelings and likes and dislikes will affect those around him. Suspicion suggests the doing of things not before thought of. Confidence reposed in others makes them desire to deserve it. There should be no antagonism between the head, the hands and the feet of the same body, and the whole force of any mercantile establishment should work together for a common laudable purpose. In the foregoing suggestions we have aimed to refer only to those qualifications of an employer which are most often overlooked:

## Inkless Printing Briefly Explained.

The Leavenworth (Kansas) *Times* gives the following brief description of inkless printing: Certain chemicals are mixed with the paper pulp and the paper when manufactured is just like ordinary paper, and as the chemicals are cheap, the paper costs little more than ordinary white paper. When touched with an electric current it yields a dense black mark, which is indelible. Ordinary presses, such as are now in use, divested of the inking mechanism, can be fitted with the electric apparatus. One wire of an electric circuit is attached to the type or stereotype plate and the other to the cylinder that presses the paper against the type. The current causes every spot in relief on the type touching the paper to print its form on the paper, just as if ink were used, but without any dampening and smearing. It is said that half-tones, electrotypes, wood cuts, and all metal designs in relief print more perfectly than by the present method. The current passing through an incandescent lamp is sufficient to do all the printing on a large press.—*Press and Printer*, Boston, Mass.

## MICHIGAN RETAIL HDWE. DEALERS' ASS'N

### WEDNESDAY MORNING SESSION.

The Sixth Annual Convention of the Michigan Retail Hardware Dealers' Association convened in Detroit at the Hotel Cadillac Wednesday and Thursday, August 14th and 15th. The first session was held at ten o'clock, President Hubbard in the chair. The meeting was promptly called to order, but the usual formality of roll call was dispensed with until the afternoon session, not a sufficiently large number of members being present to go on record.

After some informal business was attended to, such as payment of dues, receiving members, etc., an address of welcome was given the delegates by Mayor Maybury, of Detroit, who delivered a very characteristic address which was listened to attentively by those present, and was responded to by President Hubbard, who stated that he and the members of the Association appreciated very much the hearty welcome of the Mayor, and had no doubt but what they would have a very enjoyable time in accordance with the programme. In closing his remarks he extended an invitation to the Mayor to accompany the Convention to St. Clair Flats, where the Thursday afternoon session was to be held. He, at the same time, extended an invitation to the jobbers present to accompany the Convention.

A telegram was received from Vice President Henry C. Minnie, Eaton Rapids, which read as follows: "Circumstances over which I have no control prevent me from attending meeting; am very sorry; hope you will have pleasant and profitable meeting. Give my regards to the boys. This is the first meeting I have been unable to attend and would gladly be with you if it were possible."

The following Committees were then appointed:

Committee on Credentials.—Chairman, O. S. Gale, Albion; Burton Nye, New Haven, and J. G. Pattison, Detroit.

Committee on Resolutions.—Chas. F. Bock, Battle Creek; A. Harshaw, Delray and Geo. J. Phillips, Allegan.

Committee on Constitution and By-Laws.—Henry C. Weber, Detroit; F. R. Bruske, Saginaw, and C. E. Pipp, Otsego.

Question Box.—Arthur J. Scott, Marine City; E. H. McGowan, West Branch, and W. A. Wattles, Battle Creek.

After the appointment of the various committees and other informal business the meeting adjourned until two o'clock.

### WEDNESDAY AFTERNOON SESSION.

Upon the assembling of the delegates at the Wednesday afternoon session upon the calling of the roll, there were seventy-five present. The meeting went into executive session. President Hubbard then read his annual address. This address was an extremely interesting one, and was listened to with interest by those present. We give a number of extracts from it as follows:

#### PRESIDENT'S ANNUAL ADDRESS.

The future hope for the existence and usefulness of this organization depends upon our acts during this session and the impression these acts leave on the minds of our wavering brothers. We must warm up in our work now and each feel a personal responsibility in its success; become acquainted with each other quickly and throw into our brief two days' session the same zeal, industry and intelligence we practice in our daily home work. We must reach the boiling point by noon to-day and not draw the fires until the Tashmoo Captain orders us ashore to-morrow evening. Sufficient opportunities for pleasure have been arranged for by our secretary and the official board, to give us needed rest, but we have few enough working hours remaining in which to do the important work and I ask your aid in expediting the same. Business men talk to point always and I know your "make up" well enough to

know you can be relied upon to bring results out of this session which will convince the watchful eye of friend and foe that there is merit in our cause; that there is need in the retail Hardware ranks for an organization of this kind, and this one is trying to place itself in line with the greater power—the National Association.

#### FACING NEW CONDITIONS.

The members of that organization are yourselves—you are honest, earnest, unselfish. We are facing new conditions, but not difficult to successfully meet and manage if we become a unit. The manufacturers and jobbers are not unfriendly to us—on the contrary they are friendly. They realize our value and want our business, but the catalogue houses and department stores are livelier fellows than we have been, and already put themselves in shape to do business broadly and for cash. We have been following old lines while they have marked out new ones. The manufacturer and jobber want the customers who will make them the most money in the shortest time, so I suggest we consider improved methods at this meeting which will tend to make us more valuable to our manufacturing and jobbing friends, and naturally bring them over to our side, rather than adopt an aggressive course now or ever, unless compelled. We are the legitimate distributors of factory products. We do our business legitimately and on close margins, do as little baiting of the game into commercial traps as possible and the people know it. All of them are not patronizing these great city department stores—some who did that have been cured. While we feel the stings of their competition, don't you believe those houses are not feeling our awakening and the better we unite at this home gathering and put our cash and sympathy into the National, the nearer we will get to the jobber and manufacturer and the better we will be hated by the piratical catalogue house and department and racket stores.

The retail Hardware merchant who believes he can paddle his own canoe, just as he has always been doing or as his father did, will wake up to find the bottom ripped out his boat by contact with a new variety of rock growing in the bed of the old stream. The retail merchant can convince himself that his environments are freshly picked and of a new variety, by strolling through his stock in search of items not under control of trusts or combinations. I only refer to this because I am naturally mirthful and enjoy funny things presented in humorous ways, and the way our hands and feet are tied and then cross tied, and we are told to laugh and enjoy the situation, fills a man full of laughter who is hustling for bread and butter for his babies.

#### AN ORGANIZER NEEDED.

Elect for the organization the strongest organizer to be found—capitalize him and his plant so he can employ assistants for detail work and he be free to go from State meeting to State meeting, you advising with him about dates of the same and do not have them conflict. Have him enthuse you by telling you what he has accomplished. Then, and not until then, can we answer our wavering brothers' inquiry "What has been accomplished by organization?" Had all this been said ten years ago it would have fallen on deaf ears. New stings by new competition has brought about this condition.

#### LOOK OUT FOR THE CARS.

What I have said to you would make an outsider say, "That man has lost his business—no man would take such a position in the midst of prosperity." The exact opposite is the true condition, not only with me but with you. More money has been made in our places of business during the last two years than any two years in the past fifteen or twenty—but we had the stock or contracts. Crops have been good, manufacturing and building increasing and all have been booming satisfactorily, and I only ask you to pause as you do at the railroad crossing and read the danger sign and look both ways for trains. We have had a jolly ride to the crossing, now don't let ourselves be killed by carelessness.

#### JOBBER'S ARE RETAILERS' FRIENDS.

I will conclude by reference to our relations to the Jobbers' Association. Your committee has met theirs, the Jobbers'

have studied trade conditions better than we have, and they are closer to the manufacturer than we can hope to get. They realize our business is more or less demoralized, and they know why it is so, for they are frequently in contact with the same competition and know the difficulties of the situation, but they are willing to be our allies in fighting the common enemy. And I hope, in your deliberations, you will consider we have no better friends nor those who will be found more loyal than they. They were unexpectedly frank and freely and satisfactorily answered all inquiries we were intelligent enough to ask and seemed entirely willing to do so.

We are now fairly open for business, and I want a free exchange of ideas and want every member to take an interest in this session and help reap profits by making business more pleasant and profitable.

Treasurer H. C. Weber then made his annual report, and was followed by Secretary Cozzens who presented his report, which was an exhaustive one, and from which we make a number of extracts of general interest.

#### REPORT OF SECRETARY COZZINS.

For the second time in my business experience the duty of reporting the condition of our association and its progress since its last annual meeting devolves upon me. The record of the past year's development and progress cannot be measured as accurately as has heretofore been the case, because of the fact that your executive committee, after a careful investigation of the subject, decided to try a new plan of soliciting membership this year in preference to the one adopted the year before, which, while successful, had been very difficult to operate owing to the impossibility of getting the right sort of timber for soliciting. Last year, as you will remember, we put an organizer on the road about three months before our convention, and, although there was no money in the undertaking, he put on about 140 new members during his career of employment. An effort was made to follow this plan this year, but it was found impossible to secure a competent man who would give his time to the undertaking on the somewhat uncertain terms we were prepared to offer him, therefore the committee decided to make a vigorous effort to secure new members by correspondence should be made, and, in addition, to offer as a special inducement an opportunity to place some fire insurance with the Minnesota Retail Hardware Dealers' Fire Insurance Co., which, for the past three years, has been rapidly growing and doing excellent work among the Hardware dealers of Minnesota and other States. Under the laws of Minnesota that organization is not permitted to sell business outside of their own State, but they are allowed, however, to take any business brought them by another association.

\* \* \*

#### WHAT ASSOCIATION WORK HAS ACCOMPLISHED.

Occasionally you will meet a dealer who, when approached for membership in the State Association of Hardware Dealers, will ask, "What has been accomplished?" and the question is all right in its way, although we should think that the well-read merchant would have no trouble in ascertaining these facts for himself. The mere fact that a national organization of retail hardware dealers exists is of itself a potent influence in controlling many trade evils. One of the most important accomplishments that a dealer is able to put his hand on is the withdrawal of the Kelly axes from the lists of catalogue houses. After our last meeting the Kelly Bros. met with our executive committee and started in to argue that it was impossible to do this thing. Before they got through, however, they were convinced that unless they did do it, they were going to lose a large amount of trade which they were then enjoying in Michigan, and, while they made no promises that night, they certainly received suggestions which unquestionably caused a deal of hard thinking on their part. They went from Michigan to Indiana and met with exactly the same reception there, and the result was that shortly after the formation of the National Association, the Kelly people decided to withdraw their goods entirely from the catalogue houses, and it gives me pleasure to report that, in the last catalogue of a prominent Chicago house where previously these goods have been conspicuously in evidence there are no longer any Kelly axes listed.

\* \* \*

#### A HERCULEAN TASK.

In conclusion, I hope and believe that the work of the Michigan Association is going to grow from year to year in a steady and satisfactory manner. I believe that the results which grow out of these meetings are invaluable, both from

a social and a business standpoint as well. I hope and trust that interest in the National Association work will not wane, for I believe that out of it will flow the most important permanent results that are possible to be obtained from associated effort. It must be remembered that in endeavoring to remedy some of the glaring trade evils now existing, the retail Hardware dealers have undertaken a herculean task. These abuses have grown up gradually through a series of years and cannot be obliterated in a day. Here in Michigan the jobbers respect and heed the wishes of the Michigan Association, and we do not need national influence to help us, but when it comes to matters affecting Chicago, Indianapolis, Cleveland, Buffalo or St. Louis jobbers, Michigan has little influence by herself. Coupled with other States in the National, she will soon be able to make our influence felt as vigorously in those States as she has been able to do in Michigan alone. Interdependent upon each other, therefore, the Michigan and other State associations should work hand in hand for the furtherance of better trade conditions, better prices for staple goods and better profits all round.

Your secretary desires to express his thorough appreciation of the many warm personal friendships he has formed during his incumbency of office, and he trusts that the relations thus established may continue indefinitely.

At the conclusion of the Secretary's report it was intended that R. G. Chandler, of Coldwater, should read his paper on "The Best Methods of Conducting a Retail Hardware Store," but a telegram was received from him stating that on account of a bicycle collision he was unable to be present, and he epitomized the lesson to be given in his address by stating that "the best method of conducting a retail Hardware store under existing conditions is to get cash for your goods."

R. J. Cleland, of the Commercial Credit Co., Detroit and Grand Rapids, then read a long and important paper on "Credits and Collections," in which the subject was treated under a number of heads, and the illustrations given were forceful, interesting and full of wisdom. It was a very long address and deserves a special setting, which we hope to give it at an early date. It was listened to with considerable interest and no doubt formed the foundation of a number of good resolutions mentally made by the delegates present. At the conclusion of his address the meeting adjourned at 5 p. m. for the day.

#### THURSDAY MORNING.

In accordance with the programme Thursday morning was devoted to a delightful trip on the steamer Tashmoo, one of the fastest steamers on the Lakes. The delegates gathered at the White Star Line Dock shortly after eight and were soon enjoying the beautiful 35-mile sail through the Detroit and St. Clair Rivers, continuing through the Flats to the Star Island House. There, after investigating all the beauties of the grounds, a delightful dinner was participated in, succeeding which the delegates went into executive session in the ball-room of the Star Island House.

#### THURSDAY AFTERNOON SESSION.

At the Thursday afternoon session the Question Box was the first subject to be taken up, and quite a number of questions were disposed of. Irving A. Sibley, of South Bend, Ind., delivered an address on "The National Association and Its Possibilities," which was a subject of considerable interest to the Convention, and was listened to attentively.

Following Mr. Sibley, the Treasurer of the Association, Henry C. Weber, of Detroit, read an interesting paper upon a subject which commanded the attention of all the Hardware dealers present, as it was the fertile subject of "Window Dressing and Keeping Stock in Order," extracts from which we give as follows:

The successful merchant must have good wares and he must let the people know that he has them. In these times the newspaper has become a powerful factor as a means of advertising, and yet while it aids it cannot replace the advertisement which comes from the proper display of goods in a show window. The sphere of each is different. Let the newspaper bring the people to your show windows, and let the show windows bring them as customers into your store. Many a prospective customer attracted by a clever newspaper adver-

tisement has been repelled from the store of a merchant by a poor display of goods in his window. He has gone his way and said: "One cannot trust these newspapers any more," and here I may say that the many fake promises which some unscrupulous dealers have made in the advertising columns increase the importance of the show windows and the necessity of showing in them the best you have, in the best way you can. It costs so little to be nice and it goes so very, very far. In my discussion on this subject I cannot elaborate upon the views so well expressed by many who are better versed, more practical, and who take delight in performing the artistic work themselves. Every mercantile business has three drawing cards, which, when held and played together, seldom fail of their expected successful results: The newspaper that brings the people to your windows; the window show that brings the people to your store, and the merchant's affability and welcome, which keep them there and make customers of them. The window is invariably considered by the public to be the partial index of the store contents, and the better the display and the more elaborate this index the surer the results of its mission. Good attractions draw better than poor ones. Who would not rather listen to a brilliant orator than to a poor one? Who would not rather see a magnificent work of art than a daub, or listen to a grand opera singer than to a cheap concert hall howler? Your window should have the same consideration that you give to the employment of your help; it is your first silent salesman, and can give no offense, except through your own fault.

\* \* \*

#### INVENTORY EVERY MONTH.

A plan that I have found very useful and economic in my own store is to take an inventory of each department every month. This will disclose to you what goods are the most salable and also what class of stock it is desirable for you to dispose of by bargain. It will enable you to know at all times the exact needs of each department, whether it be to supply new stock of staple articles or to dispose quickly of stock which threatens to become a drag on the market.

\* \* \*

#### GOOD DISPLAYS BRING BUYERS.

It is hardly necessary to say that all goods, whether they find a ready sale or not, should be constantly kept in good order, because, no matter how old an article may be, if it is presentable, it has a selling value and may be called for by some one sooner or later. "Whatsoever is worth doing at all is worth doing well" is a general rule that has no exception. For the merchant to apply this rule with especial force to the proper display of his goods in his show windows and to the orderly and careful keeping of stock in his store is to swing himself onward in a successful career, but it means more than that. It is of greater significance than the individual success of any one man. It means more business, because a good display brings buyers and buyers make business. More business means more labor. More labor means better wages. Better wages means more clothes and more shoes, with better and healthier bodies inside of them. It means more houses and better-fed families occupying them. It means more schools and wider instruction imparted to the youth that attends them. It means more hospitals and better service to the sick that suffer in them. It means more books and more leisure to read them. It means abundance, prosperity, and the spread of intelligence, the offspring of wages and business, and the progressive merchant, the man who finds the consumer for the producer; who makes a market for the product of labor and manufacture, is the sponsor for all these blessings.

At the conclusion of the address of Mr. Weber, G. R. Lott, Secretary of the Chicago Retail Hardware Dealers' Association, explained the co-operative buying system of the Association of which he was Secretary.

This was followed by the election of officers for the ensuing year. The nominating committee, consisting of C. F. Bock, Battle Creek; C. E. Pipp, Otsego, and Fred J. Cook, Fowlerville, reported the following selection for the ensuing year: President, H. C. Minnie, Eaton Rapids; Vice President, G. W. Bruske, Saginaw; Secretary, Fred H. Cozzens, Detroit; Treasurer, Henry C. Weber, Detroit. Executive Committee, two years, Samuel Winchester, Jackson; Fred J. Cook, Fowlerville; C. J. Pipp, Otsego; A. Harshaw, Delray, and A. J. Scott, Marine City.

The following resolution was unanimously passed:

"Resolved, Hereafter trade press representatives are to be

honorary members without pay, and we will arrange so that all papers can be read at open session, as honorary members will not be admitted to executive session." It will be noted that the Convention, as they did last year, elected as President a member who was absent, Mr. Minnie having telegraphed his inability to be on hand.

Among the number of manufacturers and their representatives who were present at the Convention the following may be mentioned:

J. P. H. Armstrong, Devoe & Reynolds Co., Lansing Mich.  
 George Auer, Auer Register Co., Toledo, O.  
 C. C. Barton, Morley Bros., Saginaw, Mich.  
 J. O. Becroft, Estate of P. D. Beckwith, Dowagiac, Mich.  
 U. L. Bigelow, Morley Bros., Saginaw, Mich.  
 John W. Bowman, *Stores & Hardware Reporter*, St. Louis.  
 Frank L. Bromley, Michigan Stove Co., Detroit.  
 John O. Campbell, Art Stove Co., Detroit.  
 A. J. Carson, E. C. Atkins & Co., Indianapolis, Ind.  
 T. J. Chamberlain, Buhl Sons & Co., Detroit.  
 Frank H. Conant, Freeman, Delamater & Co., Detroit.  
 F. T. Crandall, Art Stove Co., Detroit.  
 D. T. Crowley, Peninsular Stove Co., Detroit.  
 A. H. Dane, Michigan Stove Co., Detroit.  
 James M. Dwyer, Peninsular Stove Co., Detroit.  
 Wm. A. Dwyer, Art Stove Co., Detroit.  
 Fred A. Fuller, Freeman, Delamater & Co., Detroit.  
 Day Gordon, Morley Bros., Saginaw, Mich.  
 W. E. Jackson, E. C. Atkins & Co., Indianapolis.  
 D. C. Kay, Freeman, Delamater & Co., Detroit, Mich.  
 W. T. Leckie, Estate of P. D. Beckwith, Dowagiac, Mich.  
 G. R. Lott, Chicago, Secretary Chicago Retail Hardware Dealers' Association and Illinois Retail Hardware Dealers' Association.  
 D. J. Mahoney, Michigan Distributing Co., Lansing, Mich.  
 C. H. Miller, Champion Steel Range Co., Cleveland, O.  
 C. H. Miller, Peninsular Stove Co., Detroit, Mich.  
 H. L. Mosher, Estate of P. D. Beckwith, Dowagiac, Mich.  
 George H. O'Rourke, Freeman, Delamater & Co., Detroit.  
 M. J. Reilly, Art Stove Co., Detroit.  
 J. H. Sandell, Peninsular Stove Co., Detroit.  
 H. H. Sanford, Art Stove Co., Detroit.  
 Irving A. Sibley, South Bend, Ind., Executive Committee National Retail Hardware Dealers' Association.  
 R. R. Williams, *Iron Age*, New York.  
 Daniel Stern, *The American Artisan*, Chicago.  
 L. B. Young, Michigan Stove Co., Detroit, Mich.

#### New Cartridge Factory.

The American Cartridge Co., of Hartford, Conn., was recently incorporated with a capital stock of \$100,000, of which \$60,000 has been paid in, to manufacture, sell and deal in paper and metal cartridges for shot guns, rifles, pistols, magazine guns, mining and arms of every kind; also to manufacture and deal in gun powder and other explosives. The officers of the company are James Allen Wiley, President; Charles F. A. Eddy, Vice-President; William H. Corbin, Secretary and Treasurer. The same men are the directors. The factory for the present is located on the third floor of the Hartford Fire Insurance Co.'s Building, at 175 Pearl Street, Hartford. It is intended that work shall be begun within a short time. The company have been experimenting with, and is now ready to turn out, the most improved work of the character contemplated. For the present the principal industry will be confined to the manufacture of paper shells without powder in them, but later its scope of manufacture will be increased to cover the various lines referred to in the articles of incorporation. It is uncertain just at present how many men will be employed, as they have not entirely completed the plan of operation.

◆

Most everybody stands a chance o' leavin' his name fer the world to look at—on his gravestone.

## RECENT TRADE PUBLICATIONS.

KILBOURNE & JACOBS MFG. Co., Columbus, Ohio, have recently issued three very important catalogues, each of them devoted to a special line of their manufactures. Catalogue No. 7 is a pamphlet catalogue, small size, 128 pages, covering their entire line of Trucks of all kinds, Baggage Barrows, Express Wagons, Grain or Meat Wagons, and includes in its contents Store, Warehouse, Railroad, Hotel, Dry Goods, Carpet, Wagon and Leather Trucks; also Brick Cars, Wagons and Trucks, Push Carts, Skids, Hand Push Cars, etc. This is the most elaborate line of these goods represented in one catalogue that has come to our notice, and is of sufficient importance to make it desirable to add to the library of every Hardwareman handling any goods of this character, as scarcely an article coming under the name of Truck but what will be found between its covers. Catalogue No. 31 is a pamphlet catalogue of 72 pages devoted exclusively to an especial part of their product consisting of Small Cars of all kinds, which include Contractors' Dump Cars, Steel, Ore and Mine Cars and Skips; Steel Billet, Oven, Foundry, Factory, Coal and Coke Cars; Wood and Steel Platform and Yard Push Cars; Brick and Tram Cars; Railway Hand and Push Cars; Rolling Mill and Sheet Metal Cars; Steel Sugar Cars; Wooden Tramway Stone Cars; Tin Plate Cars; Steel Coke Buggies, Mineral Buckets, etc. It is certainly a wide assortment of this class of goods. This catalogue is printed on excellent paper, finely illustrated throughout in a manner to indicate their use in every instance, and would render it a very easy matter to facilitate the sale by the aid of the graphic illustrations. Catalogue No. 33 is a pamphlet catalogue of 84 pages, printed on excellent paper, with superior illustrations, the typographical part of it being printed in colors, and is devoted to their department of Wheel and Drag Road Scrapers, Bolted Wheelbarrows of all kinds; Contractors', Railroad and Grading Plows, Tubular Steel Dirt and Mining, Foundry, Coal and Coke Barrows, Contractors' Railroad and Farm Dump Carts. Embraced in its contents will also be found Wrought Steel Sinks, Pressed Steel Shop Pans, this company making a specialty of pressed steel shapes of various kinds. This is a very attractive and important catalogue for Hardwaremen. It is enough to mention this fact to have them write for one. Everything in the shape of wood and steel barrows will be found illustrated in a very graphic manner.

BROWN & SHARPE MFG. Co., Providence R. I., are distributing at their Exhibit in the Pan American Exposition an extremely handsome brochure, attractively gotten up in oblong form, on superb coated paper, which is called by them "Here and There in Our Shops." A very short history of the company is given, by which it is shown that starting in 1853, under the firm name of J. R. Brown & Sharpe, they continued until 1868, when the business was incorporated under its present name. The illustrations given in connection with the history of the company show the original plant, which was very limited in its dimensions, and on a two-page illustration the works now occupied by the company, giving an excellent idea of the foremost place they hold to-day among manufacturers of high-grade tools. The illustrations to which the title of the publication is given, are shown on separate pages, with a tinted background, the illustrations being fine half-tones, which show "Universal Milling Machines," "Grinding Department," "Automatic Gear Cutting Machines," "No. 12 Plain Milling Machines," "Automatic Screw Machines," and "Measuring Machines," each and all of them being parts of

some special department incorporated in their works. It is undoubtedly a very attractive exhibition of constructive excellence, that would naturally excite the pride of any one connected with the Hardware industry, the plant having steadily grown from a little wooden building with a floor space of only 1,800 square feet to its present proportions. The buildings now occupied are said to be among the best in America for their line of work, and have a floor space of 8 1-2 acres, the Company's payroll including about 2,000 employees.

HARRISON BROS. & Co., INC., of Philadelphia, have recently published a very handsome booklet denominated Antoxide (Anti-Rust), which is devoted to the subject of the painting of iron and steel surfaces; showing admirable qualities and many advantages to be derived from the use of this special article, in the interest of which the book is published. It goes into the subject very thoroughly, and its conclusions are extremely sound. It is handsomely illustrated throughout, showing a number of important structures that have been treated with this new "anti-rust" paint, which is a special rust-proof preparation for covering and protecting iron and steel. It comes in the form of an easy working, quick drying, ready mixed paint. It is not an ordinary linseed oil paint, but different in composition from all other paints designed for such use, by being chemically inactive in both pigment and vehicle, and is claimed to be absolutely rust-proof. It is calculated that as it is of a remarkably free working property, a gallon will cover from 800 to 1,000 square feet. This is a valuable publication on a subject of interest, and we hope our readers will send for it.

M. W. ROBINSON Co., 79 Chambers Street, New York. Pamphlet catalogue of 16 pages, well printed and illustrated, embracing the line of mechanical tools and specialties controlled by this old established company. They are owners of the Davis Level and Tool Co., whose improved Adjustable Iron Levels, Plumbs and Inclinoimeters are handsomely illustrated and described in the contents of this catalogue, making admirable specialties for the Hardware trade to handle. Embraced in its contents will be found Carew's Patent Wire Cutters, Tool Hafts, Buell's Screw Drivers and Hollow Handle Tool Sets, Jacobs Patent Mitre Boxes. Among their specialties are Hack Saws and Hack Saw Frames and Lock Jaw File Handles in a large assortment of sizes. The contents also include a full line of the Union Spring Hinges, well known to the trade, and Smith & Wesson's revolvers, of which this concern has, for a number of years, made large sales.

THE KIRK-LATTY MFG. Co., Cleveland, O., publish a pamphlet catalogue of 40 pages covering the line of goods manufactured by this Company. It is handsomely printed on coated paper, and profusely illustrated throughout with wood cuts showing all the different styles of bolts, machine screws, nails, rods and rivets of every description that form the product of this manufacturing plant. It thus forms a very useful book for a Hardware man to have in his library, as in it he may readily see the difference between so many goods with odd names that seldom get into his regular stock, among which may be mentioned threaded rods, upset, pointed and separator pins, pinch head and roller bearing pins, dog point and pinch head screws, pad screws, bung head and steple head bolts, etc.

## NEW GOODS AND SPECIALTIES.

### "Geneva" Shears.

Smith & Hemenway Co., 296 Broadway, New York, have recently acquired control of the product of the Geneva Shear Co., Geneva, N. Y. This company makes a complete line of Scissors and Shears, Straight and Bent Trimmers, both right-hand and left-hand; Barbers' Shears, Ladies' Scissors, Pocket and Buttonhole Scissors, Bankers' and Paper Hang-

the steel being Wardlow's best English shear steel, great care being taken in hardening and tempering to secure a good, even cutting and wearing edges.

### "Electrolite" Acetylene Lamp.

The Acetylene Gas Illuminating Co., 105 Walker Street, New York, are placing on the market an acetylene house

FIG. 1.

ers' Shears, etc., and will be an extremely advantageous addition to the line of popular Hardware goods already controlled by this well-known company. We give in this article a few illustrations of the product, indicating to some extent the finish and style of goods made by the Geneva Shear Co. Fig. 1 illustrates the 8-inch Straight Trimmer, No. 257, fitted with a patent screw, which is one of the special features of this line of goods. This shear is adapted to all kinds of work, is

FIG. 2.

made from the best stock and very finely finished, either in full nickel-plate or japanned handles, with nickel-plated blades. Fig. 2 illustrates the Pocket Scissor, No. 262, which is fitted with the patent screw, and is provided with double swaged blades and beveled bows, the scissors being finished in nickel, and in common with the other goods, fully guaranteed. Fig. 3 shows the 8-inch Barbers' Shear, No. 259, also fitted with the patent screw. The improved shape makes it

FIG. 3.

popular, and as great care is used in making, it has given great satisfaction wherever introduced. The Geneva Shear Co. state that they employ none but skilled workmen, use the best material possible, and by the aid of improved machinery and modern methods, are enabled to manufacture a finely finished article at a low price. All their goods are steel-laid,

lamp under the name of "Electrolite." We give an illustration of this lamp herewith. It is exceedingly attractive in appearance, and is constructed to give a capacity for one and a half pounds of carbide. Using a half foot burner (No. 2 von Schwartz 25 c. p.) the light will last about ten hours; with a larger burner, about 36 c. p., about seven hours. As it

"ELECTROLITE" ACETYLENE LAMP.

generates gas for immediate use only, it is ready for lighting at once. The lamp is built on the principle of providing for the "carbide feed," viz.: Feeding a small amount of carbide into a volume of water and so arranged there is no over-gen-

eration of gas. It is claimed by the manufacturers to be simplicity itself in its operation, being readily charged and easily cleansed, with an internal mechanism simple in character, having no liability of getting out of order. It is claimed to be extremely economical in its operation, and with no odor or smoke.

#### The Perfection Mitre Box (Detachable).

Tower & Lyon, 95 Chambers Street, New York, are placing upon the market through the Hardware trade the Perfection Mitre Box (Detachable), which is so much of an improve-

in its construction are 5 inches in diameter, having metal sides with rubber cushion tires clamped in such a position as to be impossible to get off or come loose. These wheels are placed on a small axle, which revolves with one of the

THE PERFECTION MITRE BOX (DETACHABLE).

ment on previous devices of this kind that it is calculated to meet with a ready and extended distribution. Among the numerous points of merit referred to by the manufacturers are the following: By means of a sliding key it can be instantly and rigidly adjusted for the more commonly used angles, which are indicated on the dial by the letters, R, M, P, H. O and W, referring to the points indicated by right angle or 90 degrees, mitre or 45 degrees, pentagon or 36 degrees, hexagon or 30 degrees and octagon or 22½ degrees, drawer and window sill pitch or 9 degrees, and can be adjusted for any arbitrary angle by means of a clamp screw. It is also provided with projecting gauge points, for setting with a bevel T square when desired. No especial saw is required, as any saw may be used in its operation. The guide may be lowered or raised at will, and held in position by a clamp screw, by which means the depth of the cut can also be gauged. When a back saw is used, in order to secure accuracy, the guide is made long and may be detached in a minute from the wood box and folded so as to carry in tool chest. They are designed to be marketed by the trade at \$3 each, that being the list price. Discounts and further particulars furnished on application to the above firm.

#### The Myers' Cushion Tire Store Ladder.

F. E. Myers & Bro., Ashland, O., among other numerous important specialties, are pushing the sale of the Myers Cushion Tire Store Ladder, an illustration of which we give in this article, which shows the different parts in detail. The track is constructed from their well-known double angle steel rail, and is suspended from the ceiling by means of lag screws, either jointed or rigid, or, if desired, by flanged plates and wood screws. By this means the track is placed close to the ceiling and can be elevated on an uneven ceiling with but little trouble, requiring no blocking or bridging, as is the case in a number of other instances. The ladder is constructed of the best clear Georgia pine, being nicely finished, filled and varnished; has open panel steps, five inches wide, and is provided with five-inch steps. Each step is separated at either end with a malleable dowel tee, which is claimed by the manufacturers to make the strongest and best construction. The width of the ladder is 12 inches. The trolley is self-adjusting and made of malleable iron, fitted with turned steel bearings, and is provided with three-inch anti-rattler wheels which are turned and bored on a lathe and fitted with special rubber tires. The floor travelers provided

wheels, the other running loose. It is designed in this manner in order that the ladder may adjust itself to the floor, this style of trolley in its action being noiseless, which is one

THE MYERS CUSHION TIRE STORE LADDER.

of the unique features in its construction. Those interested in the application of an equipment of this character will find it desirable to write to the manufacturers and obtain all the essential particulars.

**Fisher Tube Skates.**

The Crosby Co., Buffalo, N. Y., whose advertisement will be found in another column of this issue, are placing upon the market, through the Hardware trade, the Fisher Tube Skate, which is illustrated herewith. These are designed to furnish a strong and light skate that will be attractive in appearance, exceedingly comfortable in wear and extremely fast in use. The plates are of thin tool steel hardened and tempered, which rest against shoulders inside a triangular tube, being held in place by rivets and then soldered. The tubes and cups are constructed from sheet steel. The process of drawing them into shape, it is claimed, makes them unusually stiff. The cups are dovetailed and soldered to the tube. The toe and heel plates are of hardened sheet steel,

FISHER TUBE SKATES.

and are seamed to the cups. It is claimed by the manufacturers that this makes the toughest and strongest construction possible in an article of this description. Their lightness makes them extremely fast, and having a long blade ground absolutely flat (except at extreme ends of which are rounded to prevent tripping). The weight is designed to be distributed over the entire surface. The heaviest skater, it is claimed, will not force these blades into the ice. The ordinary concave skates cut up the ice in a manner that the use of a skate of this character would entirely obviate. The "Hockey" model skates, which are also made by this company, have blades slightly thicker, and of somewhat different front construction on account of the very hard usage to which they are subject.

The company publish an envelope size catalogue furnishing all the necessary particulars in regard to these skates, which they will gladly forward upon application.

**A New Corporation.**

The Eastern Bolt and Nut Co. has been incorporated, with an authorized capital of \$100,000, to manufacture heavy Hardware. The incorporators named are Edwin A. Smith, Lincoln Davis and George G. Bell.

Providing satisfactory arrangements can be made with the Town Council with reference to exemption from taxation, it is understood the company's plant will be located in East Providence, R. I., the exact location as yet not being definitely settled. The company expects to employ about sixty men at the outset, and the goods manufactured will consist of bolts, cold punched nuts, machine screws, iron work for electrical and building construction and other articles of a similar nature.

The work of building the plant will be begun about Sept. 1, and will probably be completed in ninety days. The company now intends to begin operations Jan. 1. The officers of the company will be as follows: Edwin A. Smith, President; Lincoln Davis, Vice-President and General Manager; George G. Bell, Secretary and Treasurer.

**The Atlas Mfg. Co.'s Plant.**

We are permitted to present to our readers an illustration showing the plant now in operation by the Atlas Mfg. Co., of New Haven, Conn., whose sole specialty, as is well known by our readers, is the manufacture of Bradley Steel Shelf Brackets. The factory represents, beyond doubt, the largest

THE ATLAS MFG. CO.'S PLANT.

plant in this country, and probably in the world, devoted exclusively to the manufacture of shelf brackets, its building containing 20,000 square feet of floor space, and is equipped throughout with the very latest and most modern machinery and appliances to facilitate the production of this important specialty. Many changes have been made, as our readers are aware from articles on this subject, in the more perfect construction of this well-known bracket, an illustration of which we give herewith, the result of which has been that the

PAT. APR. 5, 1892.  
NOV. 8, 1892.  
APR. 4, 1898.

export trade has been largely influenced in the distribution of this production to markets heretofore unknown to an article of its utility, although by far the larger part of the consumption is in this country through the regular Hardware trade. The company are building at the present time machinery which is designed to make the production almost entirely automatic. It is reasonably to be expected that this will largely increase the output while at the same time materially reducing the cost.

**The African Annual.**

The increasing interest in the industrial development of Africa taken by all commercial countries is necessarily attended by a demand for accurate information concerning all matters pertaining to the trade and commerce of the various countries, protectorates and colonies which make up the great African continent. The publications to meet this demand are constantly increasing. One of the latest is the *African Annual and Traders' Year Book*, the first edition of which has just been issued. This is a handy little volume of 160 pages, and comprises such information as customs, tariffs, directory of the mining companies of South and West Africa, data as to the area, population and government, with particulars as to mail days, postal rates, weights and measures, etc. The book is published at the office of *African Commerce*, 46 Fleet Street, London, E. C., England, at the price of two shillings and sixpence (60 cents) net.

### Formed to Take Over Seeberger Business.

The Brown-Hurley Hdwe. Co., of Des Moines, Ia., has been organized to engage in the wholesale Hardware business in Des Moines, and will file articles of incorporation in a few days. It has purchased the J. D. Seeberger stock from the Seeberger estate and, as soon as an inventory now being taken can be completed, will take possession of it and commence business. The company has a paid up capital stock of \$200,000, and it is claimed for it that it will be the largest Hardware jobbing concern in the State.

The stockholders in the new company are James G. Berryhill, of the Green Bay Lumber Co., and the Warfield-Pratt-Howell Co.; W. O. Finkbine, of the Green Bay Lumber Co.; W. S. Brown, of Duluth, largely interested in jobbing concerns in Minnesota; T. E. Hurley, present manager for the Seeberger estate, and who has been identified with the business for fifteen years; H. A. Miller, cashier of the Des Moines Savings Bank; E. W. Brown, who has been with the Seeberger house for fifteen years; F. J. Camp, who has served with the house a like period; John W. Howell, secretary and treasurer of the Warfield-Pratt-Howell Co.; C. C. Prouty, president of the C. C. Prouty Co., and largely interested in the Des Moines Drug Co.; George F. Henry, of the law firm of Berryhill & Henry; W. S. Lacy, who has been a traveling salesman for the Seeberger house for a number of years; D. Close, who comes from Duluth, and has been associated with Mr. Brown in business in that city, and Harry West, of Chase & West, furniture dealers, and who was for many years manager of the Liverpool & Des Moines Packing Co.

W. S. Brown will be President; E. W. Brown, Vice-President; T. E. Hurley, Secretary; F. J. Camp, Assistant Secretary, and H. A. Miller, Treasurer. The directory board is composed of J. C. Berryhill, W. O. Finkbine, W. S. Brown, T. E. Hurley, H. A. Miller, E. W. Brown and Harry West.

President Brown will probably give his personal attention to the business and those of the new stockholders who have been identified with the business in the past will continue in responsible positions with the new company, the management to rest largely with them.

With the Brown-Hurley Co., Des Moines has assurance of four large jobbing concerns in this line, one an exclusive Hardware concern, one an exclusive shelf Hardware concern and two that carry stocks in both branches of the trade.

### Genesis of the Amalgamated.

The Amalgamated Association of Iron, Steel and Tin Workers is the outcome of an organization once known as the United Sons of Vulcan. According to the *Pittsburgh Dispatch*, this was composed exclusively of puddlers and boilers in the iron mills of Pittsburgh. It was formed in 1858. It made but little ado for some years. It was to all intents and purposes a secret society, and the names of members as put on record in the lodges were often assumed. In 1861 and on to 1865 conditions in the iron trade were seriously disturbed by the Civil War. The prices of iron were of the shuttlecock variety, and went up and down and zigzagged in real fireworks fashion. The wages of puddlers fluctuated accordingly, and strikes were in order. The organization now began to figure as a potent factor in the labor world. There was lots of room for discontent, and also a more general disposition to remove irritation and friction as far as possible. In 1865 an invitation was extended to the ironmasters by the puddlers to meet in conference with the men and to arrange a scale of wages based on the selling price of iron. This was mutually agreed to, and the first sliding scale was adopted. The Sons of Vulcan now blossomed out into a national organization. This came about in 1865. In 1876 the yearly scale was inaugurated, running from June to June. This has been the practice ever since. Meanwhile the heaters and roll hands in the mills had formed a separate organization from the Sons of Vulcan. In 1876 the two organizations amalgamated, and formed the order of the Amalgamated Association of Iron and Steel Workers. The tin workers were added later on.

### Resignation of President Bindley.

We learn by a communication just received from T. J. Fernley, Secretary-Treasurer of the National Hardware Association, that President John Bindley has been compelled to tender his resignation on account of his inability to give the duties the attention necessary to its official proceedings, owing to the fact that he has undertaken certain private matters which require his entire attention. The concluding portion of the letter in which this announcement was made by President Bindley, we give herewith:

"The deep interest that I have always cherished in the objects, work and welfare of the organization will remain intact, and in retiring from office I desire to express my heartfelt thanks to each and every member for the uniform courtesy, support and consideration accorded me during the period it was my privilege and pleasure to preside over your deliberations.

"With the assurance of my continued best wishes for the success and an ever widening sphere of usefulness for our association, I am,

(Signed) Yours, very sincerely,  
"JOHN BINDLEY."

The Secretary-Treasurer is pleased to state that Mr. Bindley will continue as a member of the Advisory Board, and that his interest in the Association's work will suffer no diminution. He had already announced his intention to decline to allow his name to be used at the next Convention, fully realizing that the interests of the Association would not suffer by his resignation, particularly in view of the fact that its most efficient First Vice-President, Richard W. Shapleigh, of the Norvell-Shapleigh Hardware Co., St. Louis, has consented to act as President of the Association until the approaching Convention. It must be confessed that the affairs of the Association will be in good hands with Vice-President Shapleigh in charge, and the members are to be congratulated upon being able to command his services in this most responsible position of general administrative officer, his eminent ability for the position being so unanimously recognized by the entire Association.

### A Fine Record.

The Stevens-Pope rifle barrel carried off nearly all the prizes at the Bundefeste held at San Francisco, as will be seen by the following records:

#### KING TARGET.

Adolph Strecker.....	394
L. P. Ittel.....	392
F. C. Ross.....	375

All these records are above the previous King scores of the bund. The Stevens-Pope barrels win first nine places, and seventeen out of twenty winners.

#### HAN TARGET. (4 Shots. Possible 80.)

C. M. Henderson.....	79
H. M. Pope.....	78

Four men shooting Stevens-Pope barrels have 76. The Stevens-Pope win first six places and nine out of fifteen, making 75 and over.

#### RING TARGET. (Possible 75.)

L. P. Ittel.....	74
W. F. Belknap.....	74
Dr. L. O. Rogers.....	74

Four men using Stevens-Pope barrels have 75 and seven men have 72. The Stevens-Pope win the first six places and and eighteen out of twenty-one, making 71 and over.

#### STANDARD TARGET. (5 Shots. Possible 50.)

T. R. Geisel.....	49
Adolph Strecker.....	49
A. H. Pape.....	49

Five men using Stevens-Pope barrels score 48. Stevens-Pope win first six places, twenty-six out of thirty-two men, making 46 and over, use the Stevens-Pope barrel.

#### HUNTER'S BEAR TARGET.

T. N. Schofield, shooting the Stevens-Pope barrel, won first place, making 16 out of a possible 18.

Thirty-two out of thirty-five first five on seven targets.

### A Suppressed Point in the Steel Strike.

Even without acquaintance with the conditions surrounding the steel trade, the public appears to be getting a fair sense of what is the right of this unfortunate strike. But clearer appreciation will be had of the injustice of the Amalgamated Association's demand and the falsity of some of its recent claims, when the status of the opposing organizations is better known.

The United States Steel Corporation is represented in the published statements of the strike leaders as the most conspicuous example extant of a union of industrial organizations, which, while monopolizing production and controlling prices, would prevent labor from organizing and seeks to control the remuneration of labor as well as prices of products. With no word of defense for any act of the steel corporation or its constituent companies that looks to the prevention of competition or to undue exactions in prices, we believe the facts will be seen to be far at variance with the statements of President Shaffer and his associates. What are they?

The United States Steel Corporation is the only large producer of steel in the country to-day that stands in danger from the labor trust which the Amalgamated Association seeks to create. Not only does the company have competition in every one of its products—more in some, less in others—but without exception its strong competitors are absolutely untrammelled by the Amalgamated Association. Instead of the "steel trust" threatening the Amalgamated Association, as President Shaffer would have the public believe, the Amalgamated Association, by completely monopolizing the labor of the steel corporation and depriving the latter entirely of competition in its largest item of cost, would put that company at a serious disadvantage in competing for business both at home and abroad.

As is well known, the chief producers of steel in the United States, apart from the United States Corporation, are the Cambria Steel Co., Pennsylvania Steel Co., Maryland Steel Co., Lackawanna Iron and Steel Co., Jones & Laughlins, Ltd., Tennessee Coal, Iron and Railroad Co., and Colorado Fuel and Iron Co. Not one of these companies, together producing 25 per cent. of our output of steel, is burdened with the Amalgamated Association's regulations, its limitations of output and its denial to the manufacturer of the full benefit of improved machinery. It is not to be wondered at that the United States Steel Corporation saw reason for refusing to aid the Amalgamated Association in more completely controlling its mills, while the association at the same time that it ties the hands of the leading company leaves the latter's competitors untouched.

When this is said, it is not to be implied that cheap wages are the advantage which the non-union mills of the United States Steel Corporation and its competitors enjoy. Homestead and other plants of the Carnegie Steel Co., with the highest average wage in the world, are a standing answer to that claim. Rather, the advantage is in securing free play to the genius of American engineers who by their labor-saving inventions have made the outputs of American steel works the wonder of the iron masters of the world. That the Amalgamated Association cannot be trusted with the control of American mills has been demonstrated time and again. What it aims at is indicated by the extracts from its constitution, printed in another column. Unrestrained, its rule would be intolerable and unspeakably disastrous to the American steel industry, seeking the world's markets against well entrenched competitors in England and Germany. For the United States Steel Corporation to yield to the demand made upon it six weeks ago would be comparable to the folly of a strong man allowing himself to be bound hand and foot before standing up to meet an adversary.—*Iron Trade Review*.

### Letter Writing.

Letter writing is an important branch of business education, and the man who possesses the knowledge and ability to write a graceful, courteous, straight-to-the-point letter is of considerable value to any large business house. The writing of letters, it may be observed, requires a distinct talent of its own. A man who may be able to talk well or write a readable article fails ignominiously when called upon to indite a pleasing epistle. When he undertakes the task, he feels himself to be in another sphere of action, and the words that flow easily under different circumstances fail to come at his bidding. As a matter of fact, good letter writers are rare. This is proven by the large number of poorly worded, uncouth missives that seem to dominate business correspondence, and suggests the thought that it might pay young men to turn their attention to achieving success in this department.—*Profitable Advertising*, Boston, Mass.

### Insufficient Postage on Foreign Letters.

The following letter from a correspondent in Buenos Aires, Argentine Republic, touching short postage on letters from the United States, is self-explanatory:

Kindly instruct your members and in general American manufacturers looking for export that they have to stamp properly their foreign mail. It is a disgrace to us Americans to see the show of ignorance exhibited at home by our countrymen about foreign countries and foreign habits, and I am wondering if, up to date, geography is taught in our colleges and schools at all.

For the last two years I have not spent a cent to pay stamp taxes caused by my European correspondents, but I have spent dollars and dollars for fines on my mail from the United States.

The foregoing is told "pro bono publico."

Manufacturers and merchants having business relations with foreign countries should give positive instructions to their mailing clerks that all letters for abroad should be prepaid at the rate of 5 cents for each half ounce. The only exception to the above requirement is in the case of letters for Cuba, Porto Rico, Hawaii, Philippine Islands and Guam, to which points domestic classification, conditions and rate of postage govern. In the United States when letters are received short postage, only the amount due is collected, but in most of the foreign countries a penalty of twice the deficiency is imposed in addition, and this makes letters arriving with insufficient postage a source of much annoyance to the foreign merchant.—*American Trade*.

### A Postal Paradox.

Here's a beautiful postal paradox: Uncle Sam will forward any sealed letter that is under-weight, even though it bears but a single stamp, taking his changes of pay at the other end. But when a circular, or a newspaper, or any other piece of unsealed matter is short a penny, Uncle Sam takes no chances whatever. In fact, he has an elaborate system whereby he overcomes all chances. From the office where the offending paper is mailed—Tacoma, say—a blue card is sent to the addressee—who probably lives in Washington—telling him that he can have the penny-short paper by forwarding a one-cent stamp, at an additional cost of two cents for returning the blue card. If the penny is sent, three weeks will be consumed in a transaction that would come to a termination in one week in the case of a sealed letter. If the addressee fails to send the penny—and he usually does—Uncle Sam goes to the trouble of forwarding the paper to the Dead Letter Office, opening it within sight of the addressee's residence, and returning it to the sender at Tacoma, provided his address is found within. Otherwise it is destroyed. Now, if Uncle Sam were in the shoe business, or ran an express company, or anything else that needed common reasoning to live, he would forward such mail—barring circulars, perhaps—and take chances upon collecting his penny. In most cases he would get it. If the penny were not forthcoming he would give the paper to a hospital. But Uncle Sam takes no chances.—*Printers Ink*.

### The Necessity for a Distinctive Trade-Mark, Name or Label.

Years ago, when competition was not so great and the consumer and retailer hunted out the manufacturer or dealer, and selected the brands desired, reputations for those particular manufactures were based exclusively on the merits of the goods as they appealed to the consumer or user. To-day, however, the manufacturer and dealer must hunt out the consumer and by various means of advertising and through his own efforts, create a demand for his goods.

There are still in existence some concerns whose reputation was made years ago, who have struggled along with the old methods and under the belief that, as their goods are still meritorious the demand must not only continue, but increase. These same houses will tell you that their trade-mark does not amount to anything; that no one ever imitates their label or trade-mark; they seem to be entirely ignorant that any value attaches to their trade-mark, label or brand. They are very frequently correct, but the reason is very apparent.

On the other hand, let us consider a firm that has commenced at the same time to make an equally envious reputation on equally meritorious goods, and instead of relying on the reputation they had made to maintain the demand for their goods, have advertised them and made them known by a distinctive name, label or brand. Almost anyone in his own particular line of trade can pick out two such houses. Can the latter class of houses claim that there is no value in their trade-mark, name or brand of goods? What demand is there, for instance, for the Disston Saws without the identifying marks of Henry Disston & Sons? And, if we take any leading brand of goods in any line, how long would that brand continue among the leaders, if the public did not know it by some distinctive name, trade-mark or brand?

The importance, however, of some distinctive trade-mark, label or brand can possibly be better emphasized by taking an article that may have comparatively little merit; if it is advertised properly and extensively and by a distinctive name or trade-mark, an extensive demand will be created for it and if the advertising is continued the demand will continue; it is not so much the merit of this particular kind of article that sells it, as it is the advertising and making prominent a name, trade-mark or brand; and when a man wants a particular kind of tool, piece of hardware, food, clothing, or drink, he likes to be able to ask for a particular brand, and if it is something he has not used before, or he wants to make a change, he asks for the brand that by advertising or otherwise, has been impressed on his mind; but, it would not have been impressed on his mind were it not for the distinctive name, brand or trade-mark.

To create a constantly increasing demand for a particular article, that article must be advertised extensively and continuously; if the merits of the article are advertised without any particular name, trade-mark or brand to designate it, a demand will be created that will extend only to the connections that may have been made during the length of the advertisement; while on the other hand, if a distinctive name, trade-mark or brand is used in connection with the advertising of the merits of the article, the name or brand is remembered and the goods can be identified by that name or brand, long after the reading of the advertisement. A catchy trade-mark is much more readily impressed upon the mind of the reader than the prosaic name of a corporation, consequently results obtained from advertising of this kind are cumulative—the list of converts growing larger with each appearance of the advertisement.

Tess—So Miss Giddie is really to be married at last. It must have been hard for her to settle down.

Jess—Yes, indeed. She was an awful flirt.

Tess—She certainly used to lead the men a merry race, but now she says she's "on her last lap."

### The Advertising Man in the House.

The advertising man should be the best posted and most experienced man in the house. Of course, he must have other knowledge beyond the mere mastery of his business. He must be able to write clearly and with a reasonable amount of fluency. He must be able to express himself in the vocabulary of his trade. He must understand the proper relation of illustration and description. He must know the class of illustration that best displays his wares. All these requisites every advertising man must possess. But your advertising man must in addition know the workings of your business from top to bottom. He should be thoroughly familiar with your methods of handling orders. He should be personally acquainted with your traveling men and be constantly in touch with them by correspondence. The traveling man and advertising man should work together. He should know how customers are received and entertained when they visit the house. He should know the methods used in settling disputed claims. In fact, I believe that every man who has to do with the preparing of advertising matter will agree that every year he learns many things which if he had known the year before, he could have done better work. The ambition of the advertising man should be to so master the details of his business that he may see his way clearly through any new proposition his house may desire him to launch.—*Ad Sense.*

### A Notable Chain Order.

Mr. W. A. Hengstenberg, of 2761 Boulevard, Jersey City, represents a large Chain and Forge Iron Works, who have secured the contract for the large anchor chain cables required by the Eastern Ship Building Co., of New London, Conn., for the two large steamers which the latter company is building for the Great Northern Steamship Co. and Northern Pacific Railroad Co. These steamers, it is claimed, will be the largest freight steamers in the world and are designed for the foreign carrying trade between the United States and the Orient.

The chains will consist of about 6,000 feet of stud link cables. Each link of this large-sized chain will weigh about 165 pounds, and the total tonnage represented by this order will exceed 435,000 pounds, of the value of about \$35,000.

These 3 3-16-inch chains are the largest ever attempted in this country, if not in the world. The chain company has associated with it in the manufacturing of this chain Mr. Eli Attwood, an iron expert and chain-maker, formerly of Staffordshire, England, and now the general manager and superintendent of the shops in Lebanon, Pa., where the chain will be made.

The bending machine on which the iron bars of this large diameter will be shaped preparatory to reheating for the purpose of side welding, is the invention of Mr. Attwood, who has had the process patented in this country and England. The chain will be inspected and tested under the supervision of inspectors of Lloyds Registry of England.

The competition on this order between England and the United States was exceedingly close, but the American manufacturers won out.

### Inventor of the Ballard Rifle Dead.

Mr. H. Charles Ballard, inventor of the famous Ballard rifle, died Aug. 9, at his home in Worcester. Mr. Ballard, previous to the outbreak of the Civil War, was foreman in the factory of Ball & Williams in Worcester, and in 1860 obtained patents on a breech-loading rifle, which later was used extensively. In 1862 Ball & Williams employed 100 men in the manufacture of the rifle, which was of 42-calibre and especially adapted to cavalry use. Some years ago Mr. Ballard retired from business, although he maintained his interest in machinery, and especially in firearms. He was a member of Worcester Lodge, I. O. O. F., in which he has held highest office. His widow survives.

# PROGRESSIVE MERCHANTS SELL SEWING MACHINES

## New Royal No. 12 AUTOMATIC IS THE Right Machine FOR THE MERCHANT

**WHY?** The equipment is the finest.  
Its display features are the best.  
Its construction is the most perfect.  
It commands instant attention.  
Because it is the best seller.  
Because it is the only high-grade Sewing Machine at a close price.  
Because it is the only machine that properly controls the thread.  
Because it reaches your floor already threaded, with cloth in position under the needle and ready for display and use.  
Because it is the most durable machine on the market.

### SIMPLICITY IS THE KEY-NOTE OF ITS CONSTRUCTION ~ ~ ~

The No. 12 Automatic is made of quarter-sawed oak, 5-ply stock. Rich antique and golden oak finish. Rounded edges and corners, with easy graceful lines, render the No. 12 the handsomest ever offered.

In keeping with the artistic features of the cabinet workmanship, we supply a complete new set of attachments with every number of this machine, without extra cost.

This set of attachments is superbly finished in the finest steel, and heavily nickeled. Each set is carried in a special metallic box, richly lined with dark velvet.

### READ THIS OFFER

On application we will send you a trial shipment, freight prepaid, subject to approval, a full 30-day period in which to decide—you to be the sole judge, and if not pleased, the machines returnable at our cost.

Consider this in connection with our advertising campaign. All local inquiries and orders referred back to you. Send for trial shipment at least, preparatory to your fall trade. We have other styles of machines. Catalogue to dealers *only*.

## REVIEW OF THE MARKETS.

**Wire Nails:** But little change is noted in the demand for Wire Nails, which continues good, and the general belief seems to be that with the constant accession to the supply from the numerous new plants now being organized, the Fall season's wants will be more readily met than was the case in the Spring. Although raw material is advancing in price, quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.80
"        less than carload lots.....	2.85
To retailers in carload lots.....	2.40
"        less than carload lots.....	2.50

*New York prices.* The demand for Wire Nails continues satisfactory. The following prices represent the market:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** The demand for Cut Nails has shown no unusual activity, but it is anticipated in the early future, being strengthened by the conditions surrounding wire products. Prices remain as quoted last, as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms, 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	\$2.10
Carload lots.....	2.00

*New York prices.* The local market remains in a normal condition, and prices are as follows:

To jobbers in carload lots on dock.....	\$2.18
"          less than carload lots on dock.....	2.18
Small lots from store.....	2.25

**Barb Wire:** Orders that have been delayed in shipment are meeting better treatment, the mills gradually catching up and shipping more promptly, although strike troubles exert a retarding influence. Demand continues in a satisfactory manner, the dealers preferring to have some surplus stock for the future, having had such a light stock comparatively for so long a time. Quotations remain as previously noted, f. o. b. Pittsburgh, terms, 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
" " Galvanized .....	2.90
" less than carload lots, Painted .....	2.85
" " Galvanized .....	2.85
To retailers in carload lots, Painted.....	2.70
" less than carload lots, Painted .....	2.80
" " Galvanized .....	3.00
" " Galvanized .....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** Specifications in the line of Plain Wire, are still large, with increasing quantities. Manufacturers of specialties are apprehensive of a greater scarcity in the near future, as stocks at mills continue light. Quotations remain the same, as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

		Base sizes.	
		Plain.	Galv.
To jobbers in carload lots.....		\$2.25	\$2.65
"      less than carload lots.....		2.80	2.70
To retailers in carlots.....		2.85	2.75
"      less than carload lots.....		2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

### Plain Fence Wire Advances (Catch Weights).

Nos.	Base.	Galvanized.
6 to 9.....	\$0.05 advance over base.	\$0.40 extra.
10.....		.40
11.....	.10 " " "	.40 "
12 and 12½.....	.15 " " "	.40 "
13.....	.25 " " "	.40 "
14.....	.25 " " "	.40 "
15.....	.45 " " "	.75 "
16.....	.55 " " "	.75 "
17.....	.70 " " "	1.00 "
18.....	.85 " " "	1.00 "

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Steel Goods :** The Steel Goods Association held their annual meeting on the 8th inst. in Detroit. No action was taken at the meeting in regard to any changes in present prices, by establishing a new list. This may possibly be done at a later date, as the association, at this meeting was not dissolved, but adjourned to meet at the call of the chairman.

**Cordage:** The Rope market at present is a very firm one, with an advancing tendency on best Manila. Sisal Rope has been advanced ½ cent since previous report, but some slight concession might be obtained on a large specification. The following quotations represent the market for best make of Manila and Sisal Rope:

	Pounds.
	Cents.
Manilla, 7-16 inch and larger.....	10
3/4 inch.....	10 1/2
1/2 inch and 5-16.....	11
Sisal, 7-16 inch and larger.....	7 1/2
3/4 inch.....	8
1/2 inch and 5-16 inch.....	8 1/2
Lath Yarn, medium and coarse.....	7 1/2
Jute Rope, No. 1.....	6
No. 2.....	5

**Linseed Oil :** The following are the latest quotations by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....	68 cents per gallon.
In lots of 5 barrels or more.....	65 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

**Boiled Linseed Oil, 2 cents per gallon higher than Raw.  
Calcutta Oil, 85 cents per gallon.**

THE PHILADELPHIA TRADE.

Although in the midst of the August dog days, there does not seem to be any break in the volume of business except such as is caused by the absence of dealers on trips to the seashore and mountains.

In manufactured Hardware, the strike so far has but little effect, although our friends who deal in metals announce their prices have advanced heavily. In some lines of goods we find a difficulty in getting goods, but so far there has been only a small amount of trouble on this score.

Prices, however, are very firm, and the changes announced are almost entirely in an upward direction. There are no notable changes to be reported, but a feeling of firmness prevails throughout the entire line.

Collections are fair and yet, in times like the present, it seems as if a word of caution was permissible on this line. In times of good trade there is a constant temptation to expansion, and to free granting of credit, with the result that many dealers are apt to have a large amount of credit outstanding so that, if a period of stringency follows, or their customers are deprived of employment, a loss ensues which is apt to be serious, and, while at present there do not seem to be any indications of financial trouble, and the sky seems more than clear, still, it is always well to bear these facts in mind so as to be prepared for squalls which are always sure to come—frequently when least expected.

**BIDDLE HARDWARE Co.**

#### THE ST. PAUL TRADE.

The strike now on is causing us some trouble, because of inability to get goods, but, on the other hand, we are getting more for what we have on hand. We are glad that all jobbers seem to appreciate the value of the goods they have, as it surely is uncertain when a new supply can be gotten. Sales of all lines are good, with the prospect of a continued good business during the entire year. Our farmers are now in the midst of their harvest, and the returns go to show a more than average crop, which, with fair prices, will make us all fairly happy.

C. W. HACKETT HARDWARE CO.

#### THE DAVENPORT TRADE.

The burning question of the hour is the overheated and kiln-dried condition of the corn crop. "Hope deferred maketh the heart sick," for the rain cometh not. Even if it should come now, it would be too late to save the corn and potato crops.

Whether the steel strike is to be or not to be settled soon, is another question of vital importance to the Hardware trade. With every mill in the country running, there has been a scarcity of staple goods that are made of steel and iron. What a famine there must be very soon with so many mills closed! Let us hope that an early settlement may be made that will be just and satisfactory to all parties, and let us also hope that jobbers will endeavor to get at least market prices, as fixed by the manufacturers on the few goods they have in stock until work is resumed and when they are enabled to accumulate a little stock in their stores again.

Strikes and rumors of strikes have produced much anxiety among retail dealers who are anticipating their wants and in many cases are buying in a speculative way, thereby increasing the sales footing far beyond those of August a year ago.

SICKELS, PRESTON & NUTTING CO.

#### THE SAN FRANCISCO TRADE.

Generally speaking, business in San Francisco in spite of the strike, would present no disparaging effect in a side by side exhibit with the tide of prosperity which has been flowing over the entire country for several years and has not yet begun to ebb. Almost everything that the California farmer raises is in brisk demand from an immense territory extending from Nome to Texas and the Missouri River Valley. In brief, there never was such a domestic demand for this State's farm products as that which is now pressing for satisfaction both producers and shippers. With these conditions the Golden State ought to be and is abundantly satisfied, and at the close of the year will undoubtedly be found in line with other front row, business record-breaking States.

To make the rule good there are exceptions to note, according to dealers, in builders' Hardware, who report dullness in

building operations because of a disturbed situation in labor circles, caused, as is generally conceded by tradespeople, by expert strike officials and what is characterized by the reputable local weekly press as the "yellow daily of the town."

For the purpose of seeking relief from the evils of the strike situation the Retail Dealers' Association of San Francisco, has called a meeting for next week for general conference. These committees from lines represented by Hardware are announced in August 16 issue of the local press, as having been selected by the officers of the association:

Retailers' Hardware Association.—T. J. Dean, Edward Jones, B. C. Brown, C. A. Bennett, F. G. Norman.

Mechanical Tool Dealers.—C. F. Marwedel, Etinge & Co., Osborn Hardware and Tool Co., Charles Stallman, Eastman Bros.

INDUSTRIAL PRESS ASSOCIATION.

#### A Modern Rope Factory.

In the Borough of Brooklyn is located one of the largest rope factories in existence, and probably quite the most up to date, so far as machinery and improved operations are concerned. About five hundred hands are employed, half of them being women, and the output of twine and rope is about forty tons daily. Of this total, twine of the kind used by harvesting machines forms about from twenty-five to thirty tons, the remainder being rope of various kinds, from small cordage to the immense rope cable made especially for oil-well drilling. This oil-well cable, in fact, is considered the finest product of the kind made anywhere.

Nearly all of the five floors and basement of the main building of the company's plant are given over to twine manufacture. The materials used are Manila and New Zealand hemp and another variety called "sisal," which grows in Mexico and Yucatan. The Manila product is by all odds the best; it comes in bunches of strands from four to twenty feet long. It is received in this country in big bales, all cured and ready for the machines. The first operation is the feeding of big wisps of this hemp into a breaker, a machine whose principal part is a rapidly moving table set with rows of steel teeth, three inches or so high, and arranged in rows about three or four inches apart. There are two of these first-process machines in the basement of the factory.

The bales are taken thither and cut open. One group of men are engaged in pulling the hemp from the bales and roughly shaping it into wisps a little thicker than a man's arm. These wisps are seized by a man at the upper end of the machine and fed between two rollers which carry them on to the moving table. From this table the hemp passes through another set of rollers which reduce it to a mass of fiber three inches or so thick. This is the embryo rope or twine. Next the fiber is fed into another machine with a running table set with teeth a little nearer together, and from this machine it emerges in a little more compact form and looking somewhat more like a rope, though the operation thus far has not involved any degree of spinning or twisting. From both these machines the hemp pours in a never-ending stream and so rapidly that within a minute it has filled to overflowing the bin, about two feet square and four feet high, into which the workman dexterously coils the yellow masses. Two men are kept busy doing nothing but carrying away these piles of hemp, one pile going from the coarser to the finer machine and the other from the finer to the upper floor of the building.

This floor and the next two below it are packed full of machines like the ones in the basement, each series reducing the strings of hemp to a little more compact mass until it begins to resemble twine, although no actual spinning is done until three of these operations have been completed. Then it is that the compacted strains are fed into the spinning machines or jennies, the steady roar of which is almost deafening to unaccustomed ears. The strands, varying in number and size according to the kind of twine or small rope to be

made, are fed into a bobbin which revolves with great rapidity, and by this whirling are twisted and wound on spindles which are being constantly removed. These spindles are carried away as fast as they are completed to another room, where they are fitted to the winding machines that wind the twine into balls, each weighing five pounds and containing 2,500 feet. It is in this form that the twine goes to the farmers, all ready for his harvester. The winding operation is one of the most remarkable in the entire process in point of the ingenuity of the machines and the rapidity with which they do their work. Some idea of this rapidity will be conveyed by the statement that a machine will turn out these balls of 2,500 feet of twine in about three minutes. The operatives in this room are girls and women, each of whom has charge of three spindles, a task which keeps her almost constantly on the move from one to another.

The rope-making machinery is even more interesting than that which produces the twine, and especially remarkable are the huge appliances that turn out the great cable, two inches or more thick that is used for oil-well work. Three of these great machines are set together, and each spins a cable of a different size, the largest being about two inches thick. A series of great spindles, wound with rope, move about in a circle, each paying off its rope which passes upward through one orifice, where it is caught and braided or twisted into the huge rope cable, which in turn is passed away and wound about another large spindle. This cable is not suited for hawsers, because of its stiffness, a less closely braided rope being used for that purpose; but it is admirably suited to the support and manipulation of drills and the other heavy appliances used in well drilling.

Many other styles of rope are made by machines which operate upon the same principle, but the best rope is that which is made by what is known as the rope-walk process. This is an entirely different operation and, although the rope is considered much more durable, no more is charged for it. The company has a rope walk about 1,100 feet long, stretching underground, a tunnel-like structure, from the factory proper. At one end of this tunnel are arranged scores of racks upon which are set hundreds of spindles each paying off its strand. These strands are gathered in groups and led through openings in an appliance, whence they are caught up again and attached to hooks set in an iron carriage which moves along a track down the walk. The hooks to which the strands are attached are geared to rapidly moving wheels, and when all of the fastenings are made the carriage is started and the hooks are set spinning around with great rapidity. Thus the strands are twisted as they are lengthened by the movement of the carriage. These strands are used for making the rope by a similar operation, lengths of

1,000 feet of various sizes being produced by each trip of the carriage down the walk.

In another department is made the tarred twine used for tying bundles of kindling wood and for packing bales. This is a simple operation, the twine being passed through a long trough containing a solution of tar, and gathered up at the further end, where it is cut into lengths and made into bundles ready for the trade.—*The American Exporter.*

#### The Genesis of Slate.

A very great industry in North Wales, says an English contemporary, is the quarrying and preparation of slates. Slates are derived from one of the lowest or oldest series of sedimentary rocks which geologists distinguish in the earth's crust, the Cambrian. Underlying the Cambrian rocks is a still older series of rocks known, for want of a better term as the Archæan, of the true origin of which there is still some uncertainty, but while the Cambrian rocks have been subjected to many changes, the Archæan rocks have retained their position more distinctly than any of the series of rocks which overlie them. During the cooling of the earth's crust, which has gone on since the Cambrian rocks were deposited on the floor of the ancient ocean, and by the repeated intrusion of masses of granite, trap and other igneous rocks, the Cambrian slate rocks were thrown against the older rocks and subjected to great pressure, which has been continued for a long period of time; the effect of this is now seen in the peculiar construction of the slates; this pressure has, it is thought, brought about the peculiar property of slate, of cleaving into thin sheets or plates. The pressures acting on the particles of the clay originally deposited as a soft plastic mass causes them to lie parallel to one another and thus to produce this cleavage property. Unless the rocks had been subjected to this pressure, they would not have broken up into plates. The strata of the slate rocks are found in large folds and convolutions, and the plane of cleavage is found to lie parallel to the axis of these folds. When the slate rocks are examined under the microscope, it is seen that their particles lie with their flat surfaces perpendicular to the direction in which the pressure was exerted. The cleavage into thin plates is most readily done soon after the mass of slate has been quarried; the longer it is exposed to the action of the weather the more difficult does it become to split it.

The materials from which the slate rocks are derived are those of common clay, silica and alumina, derived by the weathering of older rocks situated on a continent that existed, in former days, to the northwest, and these materials were carried down by rivers flowing from this continent to an ancient ocean covering the spot where the slates are now found. In the mutations of changes of the earth's crust the

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

continent has sunk and become covered by the present ocean, while the bed of the ancient sea has been raised up into the present dry land. There are some chemical differences between different masses of slate rocks, and it is these differences to which one must look to account for differences of color and for the different wearing qualities of various slates.

### An Entering Wedge.

In the course of a recent lecture in Hartford, Conn., on "The Making of a Newspaper," Charles Hopkins Clark, of the *Courant*, said:

"How are you going to get at the public? Mail them circulars, and the waste baskets in 10,000 homes give each a weary yawn, and the circular disappears unread. Call upon people and explain the merits of your wares? The sign 'Our busy day' hangs in business offices; in private houses you must ring the bell. Oftenest you are turned away. If you get in by any shrewd excuse you cannot go beyond the hall or reception room. You are quietly watched here in the interest of overcoats and umbrellas. But put a cleverly-worded advertisement of these wares into a newspaper that has an established circulation in the city's homes and business houses and see what happens. You couldn't get in there yourself, but your advertisement is there on the breakfast table, in the library, in the parlor, in the sewing room; and, when everybody is inquiring for the paper, which can't be found, it is very likely doing duty on the quiet in the kitchen. It is all over the house and wanted there. You were not. Similarly, at the office, it is read and re-read, and part of the use of the 'This is our busy day' sign is to get a chance to read the papers. And it is interesting to note that the advertisement has another than a commercial use. It is printed for business purposes pure and simple; but, after it has served its day, it takes its place in the picture of the life of the times. Back a hundred years or more in our files the advertisements are really more interesting than the news, so-called."

### Origin of the Follow Up System.

I know a very successful merchant, living in a country town, who did very little newspaper advertising, but who built up a trade extending for many miles around that was as loyal to him as the congregation of a minister. Twice every year he sent out letters, written in long hand, inviting farmers' wives, especially, to call and examine new samples of calico, muslins, etc., which he inclosed in the letters. These were written by his clerks during spare hours. He ran his store the same way that the captain runs his ship. He never allowed idleness anywhere, and when a clerk was not waiting on customers, he or she had pen and ink and paper and was writing a letter. Very few of the recipients ever guessed that this letter was not written by the head of the store himself. They were invited to call and they were given actual samples of goods, which were marked at an exceedingly low price. The impression made on their minds that they had been specially sought out and invited to visit so well known and successful a merchant was very gratifying to them and established a cordial relation toward him and his store.—*Exchange*.

### Trade Paper Advertising.

Those who occupy space in the advertising pages of the trade papers should be credited with a desire to get some return for the money invested in that way. Certainly a good trade paper is a valuable medium of communication between manufacturer and retailer, and if proper attention is given to the advertising results should follow.

A trade paper, carefully edited and containing reading matter of interest to those in the trade to which it is devoted, is sure to have a choice circulation—small in number perhaps, but large in influence, reaching every live dealer, those who keep up with the times and are successful business men.

Such men in their endeavor to reach and hold leading positions in the business race are careful readers of these trade papers; they do not confine their reading to the editorials and news columns, but scan the advertising pages with the idea of learning what they can of the goods offered for sale.

It is important that more than the name, address and a list of goods appear in these advertisements; this point has been stated and emphasized more than once. The advertisements should contain something of interest to the dealer, told in a way that will impress him that the goods should be on his shelves and induce him to order at the first opportunity. It is just as important that a trade paper advertisement be carefully written and attractively displayed as it is that the ad of the department store be readable.

The advertiser in a trade paper should describe his wares, explain in detail their good points and present reasons why they are desirable goods for the retailer to carry in stock. He should suggest how the different articles can be displayed to advantage and give methods of successfully retailing the goods. If he is a general advertiser he should explain how his advertising in the magazines and similar mediums helps the retailer by stimulating the demand for his goods and making them more widely known.

It is neither necessary nor desirable to crowd into one advertisement all the points and suggestions just referred to, but better to select one feature and describe it in detail, briefly mentioning other points, then in the next issue bring out another feature or outline a selling plan, and so on, varying the advertisements in each issue of the paper. In this way the interest of the readers is kept up and the advertising will prove effective and produce results.—J. FRED WRIGHT, in *Printers Ink*.

### England's First Lifeboat.

The question of a life-saving boat was first discussed in the year 1789, at the little shipping town of South Shields, says the *London Mail*.

There have been many so-called inventors of the lifeboat, but the question was settled satisfactorily some years ago, and the honor given to William Wouldhave, described by a friend as a "tall, uncouth, enthusiastic man."

It was owing to the loss of the brig *Adventure*, of Newcastle, at the mouth of the Tyne, in the month of September, 1789, with the loss of all hands—the men dropping from the rigging exhausted by the cold and fatigue, and witnessed by thousands on shore, all powerless to give the least assistance—this "having followed several dreadful casualties, that a

determination was formed to try to lessen the risk incurred by vessels, British or foreign, attempting to enter the Tyne in rough weather."

The first to move in the matter was a Justice of the Peace, Nicholas Fairles, assisted by several other Shields gentlemen.

A public meeting was called, and the whole question discussed, with the result that prizes were offered for the best invention of a lifeboat. But of all the models entered for the competition, none satisfied the committee. A model entered by a boatbuilder—Henry Greathead by name—was considered quite useless, and another model of tin, the idea of Wouldhave, was ridiculed.

"So you pretend to make a lifeboat?" said one of the judges. "What advantages do you say this thing possesses?"

"Well," was the reply, "I say it will neither sink nor go to pieces, nor lie bottom up. Will any of yours do as much?" But the others were far from being convinced. The two guineas that were offered Wouldhave were contemptuously refused.

### Cast Steel.

"From the earliest times up to the middle of the eighteenth century the only method by which steel was made was by heating wrought iron in close contact with charcoal or some carbonaceous material," says the *International Monthly*. "In 1741, Daniel Huntsman, a clockmaker of Handsworth, near Sheffield, England, made practicable a process of making cast steel in small crucibles. At first the contents of the different crucibles were not sufficiently uniform in composition to allow of mixing, and the size of steel castings or forgings was limited to the amount of steel contained in one crucible. Later, however, as skill in refining became more expert, the contents of many crucibles were poured into a ladle and the resultant mixture cast into molds of suitable shape for use in the trades. The most successful pioneer in developing the crucible steel industry was Alfred Krupp, of Essen, Germany, who, with his descendants, have always led their competitors in the size and excellence of castings and forgings of this metal. At the International Exhibition in London in 1851, this manufacturer exhibited a cast-steel ingot weighing two and one-quarter tons, this being by far the largest steel casting made up to that time. He progressed rapidly after this, and at successive world's expositions—at Paris in 1855, at London in 1862, at Paris again in 1867 and at Vienna in 1873—exhibited ingots weighing respectively ten, twenty, forty and fifty-two and one-half tons. Since then the weights of ingots at these works have nearly doubled the amount last mentioned. When it is borne in mind that the contents of over 4,000 crucibles are necessary to furnish the metal for these largest ingots, the great skill attained in the manipulation of material and men will be appreciated."

### Origin of the Tinplate Industry.

The tinplate industry is said to have been introduced into Wales by Capel Hanbury, ancestor of Major Hanbury-Leigh, of Pontypool Park. In early life he had traveled in Norway and Sweden, where the iron industry was then in a more advanced stage than in this country. A method of rolling the iron into large plates, which were used as the roofs of houses, had been in existence there for some time. Roller mills were in existence in Wales, but not of the kind used in Norway, and on his return to this country, Capel Hanbury leased a large tract of land at Pontypool from the Earl of Abergavenny for 99 years, and then had set up roller mills in connection with his furnaces, and these were an improvement on those of Norway. These mills rolled plates much thinner than those of Norway, and in time the black plate was introduced, then coated with tin, and the root of the tinplate trade commenced here. Mr. Hanbury is said to have been the first maker of tinplates in Glamorganshire. He was a man of keen observation, and, while up to this time bars, etc., were obtained by hammering, he showed that it was quite possible to turn iron, as well as wood, provided that the instruments used were harder than those of ordinary iron.—*Iron and Coal Trades Review*.

### THE JANESVILLE HAY TOOL CO.,

Janesville, Wis., begs to inform its numerous patrons, that subsequent to date of August 17th, its headquarters will be in Chicago. The very satisfactory growth of the business during the past year, coupled with the belief that we can better subserve our mutual interests by being in the center of trade activity, prompts us to the change. Low prices, quick shipment, and careful attention to business generally, has gained for us many new friends, and we beg to assure the trade at large that the utmost endeavor will be made to merit a continuance of their valued patronage. Wait for our salesmen.

## HARDWARE

HARDWARE  
EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its twentieth volume and is consequently in no experimental stage, waiting to establish a subscription list.

**HARDWARE'S** rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Ashtabula, O.—Another Hardware store has been opened at the Harbor under the firm name of Mack & King. The new firm is composed of two well-known business men, L. Mack and M. B. King. Their store is located in Mr. Mack's building at 127 and 129 Bridge Street.

Charleston, S. C.—The Coleman-Wagner Hardware Co. has been organized for the purpose of conducting a general Hardware business. The company will be capitalized at \$60,000, and the amount has already been subscribed.

Florence, S. C.—A commission for a charter has been issued to the Florence Hardware Co. The capital stock of the company is to be \$25,000. The officers of the company are M. Bonniott, president; W. W. Watt, vice-president, and A. W. Welling, secretary and treasurer.

Medford, Okla.—H. M. Stewart.

Natick, Mass.—The business of W. D. Parlin has been incorporated into a stock company with a capital of \$40,000, and will hereafter be known as the W. D. Parlin Hardware Co. The new corporation has the following officers: W. D. Parlin, president; Lloyd Brown, treasurer; Richard Foley, clerk; Priscilla Pratt, cashier.

No. Baltimore, O.—Brewster & Rogers, the Southside Hardware dealers, have been granted incorporation papers with a capital stock of \$10,000.

Sioux Falls, S. D.—Articles of incorporation have been filed for the Sioux Falls Hardware Co., with a capital of \$75,000. Incorporators, R. K. Rebok, Charles D. Bower and M. R. Kenefick.

Springfield, Mo.—Rogers & Baldwin Hardware Co.; capital stock, \$150,000. Incorporators, A. A. Baldwin, Lucy I. Rogers, O. W. Waller et al.

Springfield, O.—John Hugel, with the Springfield Hardware Co., and Ed. Heiserman, a traveling salesman, will open a new Hardware store in a few weeks.

### Changes and Improvements.

Campello, Mass.—Wilfred Keith has closed his Hardware store in Keith block.

Catskill, N. Y.—J. H. Wilkinson has purchased the stock and business of the Russ & Beach Hardware store at the corner of Main and Church Streets.

Chicago, Ill.—Another \$500,000 warehouse is being planned by Frost & Granger for Hibbard, Spencer, Bartlett & Co. It will stand in North Water Street, just east of St. Clair Street. It is to be ten stories high and of steel construction, with pressed brick fronts. The ground dimensions are to be 125 by 420 feet.

Detroit, Mich.—Notice has been filed with the County Clerk that the capital

stock of the Fletcher Hardware Co. has been increased from \$150,000 to \$200,000.

Fairmont, W. Va.—Marvin D. Boland has purchased a share in the Hardware stock of Hodd & Clelland and will be found there hereafter.

Greeley, Neb.—M. Murphy is erecting a large Hardware store 50x100 in the place occupied by him before the recent fire.

Greensburg, Pa.—The firm of Temple & Son have begun the work on a new addition to their Hardware store.

High Springs, Fla.—E. K. Anderson has purchased the stock of groceries and Hardware of Robinson & Co., and will hereafter run the business.

Kalamazoo, Mich.—George Sperry, who has purchased the Hardware stock of Charles Schau in the Auditorium Building, has removed from Chicago to this city to reside.

Marshalltown, Ia.—William Furbush, of Chicago, has bought the Loree Hardware store and expects to re-open it to the public in a short time.

### Embarrassments.

Brightwood, Mass.—The Stebbins Mfg. Co. has made an assignment.

Ottawa, Ill.—The store of Armstrong & Mitchell has been closed on a chattel mortgage held by P. G. Schoch for \$150. Armstrong & Mitchell conducted a Hardware, farming implement and bicycle store in the Colwell block on La Salle Street.

Perrysville, Ohio.—John G. D. Tucker's Hardware and implement store has been placed in the hands of J. W. Mykrantz as receiver. Assets, \$4,100; liabilities, \$3,400.

Shippensburg, Pa.—William A. Cox, for many years the leading Hardware merchant of Shippensburg, has made an assignment for the benefit of creditors.

Syracuse, N. Y.—Henry King, who conducts a general Hardware store and tin shop, has made a general assignment to Fred W. Hammond, of 703 Tallman Street, for the satisfaction of his creditors.

Tivoli, N. Y.—Charles H. Morgan has been declared a voluntary bankrupt. His assets are nothing, while his liabilities are \$1,600. Mr. Morgan was a Hardware dealer.

### Recent Fires.

Birmingham, Ala.—The warehouse of the Moore & Handley Hardware Co., on Morris Avenue, near Seventeenth Street, caught fire recently, and was damaged to the amount of about \$200.

Blaine, Me.—Geo. W. Young. Loss, \$6,500.

Boonville, Mo.—Joseph Leiber. Loss, \$12,000; insurance, \$500.

Camden, N. Y.—Smith & Becker.

Colebrook, N. H.—Colebrook Hardware Co.

Dallas Center, Ia.—Grant McLain. Insured.

Dansville, N. Y.—Geo. W. Peck Co.

Decatur, Ill.—Fire was discovered recently in the Decatur gun store. The place was filled with fireworks and other highly inflammable material, and although the fire department responded quickly, the entire interior was gutted before the firemen could get water on the flames. The stock was valued at \$17,000, and the insurance is about 80 per cent. of that amount. The building was badly damaged, but is fully insured.

Edwardsville, Ill.—D. A. Keller & Co. Loss, \$15,000.

Enid, Okla.—Gensman Bros. Loss, \$35,000; insurance, \$10,000.

Gananoque, Canada—J. Brathwaite. Loss, \$5,000; fully insured.

Garrett, Ind.—Teeters & Little. Loss, \$25,000.

Hampton, Neb.—C. Newman.

Jeromeville, O.—Kahie & Ewing.

Lincoln, Neb.—W. H. Ward.

Lone Rock, Wis.—O. Beckwith. Loss, \$6,000; insurance, \$2,500.

Nesquehoning, Pa.—William H. Bond's Hardware store has been destroyed by fire, the loss being \$2,000.

Oakland, I. T.—L. B. Huntley. Insured for \$2,000.

Ottawa, Ont.—W. Howe. Partially insured.

Riceville, Ia.—Hancock's Hardware store. Small insurance.

Ripon, Wis.—L. G. Bartlett. Loss, \$600. fully insured.

Rosalia, Wash.—D. F. Anderson & Son. Loss, 15,000; insurance, \$8,500.

Seattle, Wash.—N. H. Thedinga. Insured.

Wickliffe, Ky.—Prentice & Co. Loss, \$4,000; partially insured.

### Burglaries.

Baltimore, Md.—John W. Russell, 2220 Boston Street. Loss, \$75.

Buffalo, N. Y.—John F. Smith, 360 Broadway.

Carlisle, Pa.—Thos. E. Myers & Co. Loss, \$85.

Chicago, Ill.—Van Denberg & Pronger, Vermont Street and Western Avenue. Cutlery.

Durham, N. C.—A. E. Lloyd & Co. Revolvers and cutlery.

Philadelphia, Pa.—Carl Snyder, 127 S. 10th Street. Loss, \$375.

Table Rock, Neb.—A. R. Kovanda. Pocket knives and razors.

Tamaqua, Pa.—Beddall & Short. Loss, \$100.

Toledo, O.—Neipp & Emmert, Door Street and Collingwood Avenue. Revolvers, etc.

Toledo, O.—Shieffly & Burdick, 2011 Adams Street. Cutlery.

Turner's Falls, Mass.—F. I. Webster. Small loss.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Albion, Mich.—The Albion Windmill & Implement Co. is to be reorganized immediately, with larger capital stock, and a gasoline engine added to its list of manufactures. The patents on the latter are held by James H. Cook, of Homer, who will probably be general manager of the reorganized company.

Chicago, Ill.—Jones & Dommersnas Co., capital, \$2,500; manufacturing mechanics' tools, etc.; incorporators, J. P. Dommersnas, J. A. Burch, J. J. Neiger.

Frankfort, Ky.—The Time Saving Scale Co., of Louisville, capital, \$2,500, has filed articles of incorporation.

Frederick, Md.—The Maryland Shovel Plow and Tool Co. has been organized and articles filed with the Circuit Court. The incorporators are Francis Albert, C. R. Yohn, W. W. Albert, Francis A. Albert, of Baltimore; T. H. Rose, of New York; George W. Biser, Henry M. Ruppenthal, Gragory Ruppenthal, of West Virginia; W. F. Steiner, George T. Steiner, Jefferson and Jacob Rohrback, of Frederick. The incorporators, with the exception of Mr. Rohrback, whose place is filled by Jacob Smith, are the directors for the first year. The capital stock of the company is \$50,000. They organized by electing these officers: George W. Biser, Berkeley Springs, W. Va., president; William F. Steiner, Jefferson, vice-president; Francis Albert, Baltimore, secretary; George T. Steiner, Jefferson, treasurer; Francis Augustus Albert, Baltimore, manager. The company proposes to establish a factory in Jefferson, near Steiner's Mill, and will use water power to operate the plant.

Geneva, Ill.—The Wheeler Co. has been licensed to incorporate, its capital stock being \$20,000. J. N. Wheeler, William Gaylord and F. B. Wheeler are the incorporators. J. N. Wheeler has for some years been engaged in manufacturing window screens, etc.

Lancaster, Pa.—The charter of the Chase Co. has been received in the recorder's office. The company will manufacture a patent machinery belt fastener and other articles in the small Hardware line. The directors are Daniel Chase, John J. and H. B. Cochran.

Lockport, N. Y.—Merritt Mfg. Co. to manufacture tools and machinery; capital, \$20,000. Directors, L. G. Merritt, H. M. Merritt and Joseph Dussaule, Lockport.

Los Angeles, Cal.—The Los Angeles Stove and Mfg. Co. has incorporated with a capital stock of \$25,000. The directors are E. H. Knapp, W. F. Giles, J. M. Mer-

ritt, Geo. S. Porter, Jr., and M. E. Porter, all of Los Angeles.

New York, N. Y.—Empire Pneumatic Tool Co. Capital, \$10,000; directors, J. W. Birkenstock and P. A. Gage, of New York City, and Lincoln Pierce, of Pelham.

Portland, Me.—The Diamond Extension Ladder Co. has been organized for the purpose of manufacturing ladders, clothes dryers, painters' and masons' articles, with \$10,000 capital stock, of which \$30 is paid in. The officers are: President, Chas. W. Noyes, of Melrose, Mass.; treasurer, Wallace H. Jose, of Boston.

Quincy, Ill.—The Excelsior Stove Co. is to erect an addition to its present plant.

Quincy, Ill.—The Quincy Stove Mfg. Co. has recently increased its capital stock to \$75,000, and will put in a fine nickel-plating works in connection with the foundry.

Reading, Pa.—The Manufacturers' Tool Works, a new industry occupying the second floor of 316 Maple Street, has been started by George J. Knaut and H. V. Ruth, both practical mechanics. They have equipped their plant with modern machinery and are busy on a general line of tool and die work. Additional machinery will shortly be added and more hands employed.

Syracuse, N. Y.—The Walsh Last Block Fastener Co. has been incorporated in this city. The capital stock is \$6,000, with the following directors: John P. Walsh, William E. Hopkins and William K. Niver.

Trenton, N. J.—Clipper Lawn Mower Co. has incorporated. Capital stock, \$150,000. R. K. Ortt, Norristown, Pa., J. W. Avery, New York, and H. G. C. Thornton, Cranford, incorporators.

Waukesha, Wis.—Two new manufacturing industries have been started in Waukesha, and both are now in operation. Dent & Swaggert Mfg. Co. makes a patent clutch monkey wrench and a spring oscillating bearing for sewing machine treadles. The other firm is the Jones Mfg. Co., which came here from Janesville. Several patented articles are being built by this firm, the chief one being the Jones stake and wagon-box iron and fittings for whiffletrees, neckyokes and harnesses.

### Changes and Improvements.

Ashland City, Tenn.—E. D. Lewis will remove his ax-handle factory from the Thirteenth District of this county to some point in Stewart County.

Chicago, Ill.—Chicago Hardware Foundry Co.; capital stock increased from \$30,000 to \$65,000.

Grand Rapids, Mich.—Grand Rapids is about to lose one of its machine-making industries, the proprietors of both the Valley City Machine Works and the Western Machine Tool Works having decided to move the plant of the latter company to Holland. The concern which will go to Holland is

that branch of the business devoted to the manufacture of iron working machinery, making radial drilling machines of various sizes, ranging in weight from 8,000 pounds up, horizontal boring machines of about the same sizes, and other iron working machinery incident thereto.

Janesville, Wis.—The Janesville Hay Tool Co., one of the leading industries of this city, will remove to Chicago.

Lowell, Mass.—The Fifield Tool Co., at a meeting of its stockholders, voted not to rebuild its plant destroyed by fire last Spring, but to go out of business. The affairs of the concern will be carefully investigated by a committee. The capital stock is \$150,000. It had been engaged since 1894 in the manufacture of machinery.

Montello, Mass.—Henry T. Anglim has sold to Geo. A. Carter a large tract of land on Spark and Intervale Streets, and Mr. Carter will immediately erect a modern tack factory, of mill construction, 35 by 160 feet, on a portion of the property. Mr. Carter expects to get into the new factory by Sept. 15th. The land purchased is 300 by 160 feet. In addition to Mr. Carter's large tack business, his Boston business of manufacturing taps will be moved to this city.

Niagara Falls, N. Y.—The Oneida Community is removing its chain manufacturing plant from Niagara Falls to Sherrill, a community manufacturing village in the town of Vernon. About 100 hands will be employed at the plant.

Pittsburgh, Pa.—The Riter-Conley Mfg. Co. has purchased 50 acres of land from the Economites, situated on the Ohio River just below Leetsdale, for \$45,000. The purchasers will erect on the site a bolt works, which will employ between 200 and 300 men.

Plainfield, N. J.—Improvements on a large scale are shortly to be made at the Pond Tool Works, and when completed, the already big plant will be greatly improved in appearance and the facilities much increased. It is intended to commence the construction work in the near future, and no time will be lost in finishing the job.

# A Meat Cutter

The Gem cuts meat—in fact it is a first-class meat cutter. It cuts meat, both raw and cooked ; it cuts in pieces of uniform size ; it cuts quickly and easily ; it cuts—does not tear, squeeze or grind.

## A Food Chopper

It chops vegetables, fruit, bread, crackers, cheese, nuts and many other ingredients that are used in the kitchen every day. A house-keeper will find the Gem exceedingly useful.

**To sell the Gem** get a supply of the printed matter we furnish and distribute it among the housekeepers of your section and at the same time use in your local papers the electrotyped advertisements we will gladly supply. Or have a house-to-house canvass made by a competent representative—one who can demonstrate to the housekeeper in her own kitchen that she needs the Gem. Or have an exhibit and demonstration at the County Fair soon to be held and give out printed matter to every one. Then have an occasional window display of the Gem, use freely the attractive show cards packed with each half dozen, and remember that the Gem has steel cutters that cannot break.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Caldwell, N. Y.—Wm. Morgan has opened a bicycle repair shop.

New York, N. Y.—Wilson Bros., 2083 Eighth Avenue.

Paw Paw, Mich.—Alva Norwood.

Roanoke, Ala.—Charles E. Tucker, repairing.

South Paris, Me.—Herrick Bros., repairing.

Wakefield, R. I.—H. S. Clarke, Clarke Block.

Wilmington, Del.—L. D. Kemp, formerly of Philadelphia, has formed a partnership with Albert E. McDaniel, at 1011 Market Street.

### Changes and Improvements.

Bowling Green, Ky.—The Allman Gear Co., of Huntington, Ind., is thinking of locating a factory here. They will manufacture bicycle supplies, and expect from the start to give employment to seventy-five skilled laborers.

Buffalo, N. Y.—John T. Finn and Alfred J. Chretien, composing the firm of Finn & Chretien, have sold out their stock of bicycles and bicycle supplies at 625 Main Street to Annie Krumholz.

Chicopee, Mass.—The American Bicycle Co. has decided to close its plant at the Falls, which was shut down in the Spring. An inventory of the stock and machinery is now being taken and the charge of the plant will be turned over to F. C. Breakspear.

Coldwater, Mich.—Shugers Cycle Co., Geo. Shugers retires, and Frank Shugers will continue business under same name.

Dayton, O.—Joseph A. Wortman, receiver in the case of Earl H. Kiser against R. H. Croninger, has sold to Niehaus & Dohse, property of the partnership, consisting of guns, athletic and sporting goods, cameras, fishing tackle, etc., for \$1,710. The appraised value of these goods was \$2,522.67.

Ivoryton, Conn.—Bushnell & Behrens succeed Clarence Bushnell.

Keene, N. H.—The Wilkins Toy Co. has purchased stock of A. J. Sweeney.

Leavenworth, Kan.—E. N. Woodruff, of Allegheny City, Pa., has purchased the gun and sporting goods store, formerly owned by W. W. Carney, and will assume possession of the store at once. Mr. Woodruff has already moved to Leavenworth and has settled here permanently.

Lorraine, N. Y.—Supt. O. L. Shelmidine is erecting a large building to be used for the bicycle department of his business.

Mankato, Minn.—Gormer Jones succeeds Owen & Jones, Edgar Owen retiring.

Marshall, Mich.—The old plant of the Royal Cycle Works, is now being operated by a concern which turns out fly killers.

Reading, Pa.—Contractor L. H. Focht has been awarded the contract to build an addition, two stories high and 24 by 54 feet in dimensions to the brick plant of the Reading Cycle Mfg. Co., at Tenth and Bern Streets.

Torrington, Conn.—The Miller Mfg. Co. was recently sold by the trustee, C. S. Dike-man. The company made the Arc bicycle lamp and was supposed to be doing a good business.

Versailles, O.—Jos. Manier, Jr., succeeds Manier & Pequignot.

Westfield, N. J.—William P. Scriven, who has been in the bicycle business since 1895, has retired.

Westfield, Mass.—Work has started up much earlier than usual in the season at the American Bicycle Co.'s local plant and fully 350 men are employed in the manufacturing department, and between 30 and 40 in the Cleveland sales department.

Windsor Locks, Conn.—W. J. Miller succeeds F. L. Harvey.

### Recent Embarrassments.

Bridgeport, Conn.—Henry F. Brautigam, the Fairfield Avenue bicycle dealer, has filed a petition in bankruptcy in the United States District Court at Hartford in which his liabilities are estimated at \$5,116.03 and his assets at \$5,606.65.

Hartford, Conn.—Edmund L. Wheeler, a bicycle dealer, has filed a petition in bankruptcy. His liabilities are \$3,640.58; assets, \$3,040.

Keene, N. H.—Holman & Morse have filed a petition in bankruptcy at the office of the clerk of the United States Court.

Lowell, Mass.—A petition in bankruptcy has been filed by Thomas C. Rutland. His schedules show liabilities of \$4,829.47. Of this amount, \$1,100 is secured to three creditors. He has assets of \$1,500, consisting for the most part of stock in trade valued at \$800, and debts due of \$700.

Marion, O.—C. B. Keiser, bicycle dealer, has made an assignment to J. W. Sifritt. The liabilities are \$1,000, and the assets will about cover them.

New York, N. Y.—William H. Burroughs, dealer in bicycles and supplies under the style of the Burroughs Cycle Co., at 7 Barclay Street, has filed a petition in bankruptcy, with liabilities \$8,397 and assets \$2,798.

Peoria, Ill.—Fillo Schupp, who has been running a bicycle repair shop, has filed a petition in bankruptcy with liabilities footing up \$1,170 and assets valued at \$400.

Philadelphia, Pa.—William G. Calver, individually and as a copartner in the Vertical Bicycle Mfg. Co., has been declared a bankrupt. Liabilities, \$3,503.76; assets, \$300.

Sandy Hill, N. Y.—Junie Wells, of the firm of Laraway & Wells, dealers in bicycles and sporting goods, through his attorney, H. W. Williams, of Glens Falls, has filed a petition in bankruptcy, individually and for the firm. The estimated liabilities are \$1,800 and the estimated assets about \$1,400.

Syracuse, N. Y.—Horace Dodge, a member of the Dodge Cycle Co., has been declared a bankrupt by Referee Charles L. Stone. The declaration was as an individual and as a member of the Dodge Cycle Co.

### Recent Fires.

Escondido, Cal.—E. M. Churchill; damage small.

Marquette, Mich.—F. H. Hoard, loss, \$2,000; partly insured.

Rochester, N. Y.—Irving I. Legg.

## HARDWARE MANUFACTURERS RECORD. Continued.

### Changes and Improvements.

Meriden, Conn.—The Meriden Machine Tool Co. is being reorganized with an increase of \$10,000 in its capital stock on an agreement of creditors to accept 25 cents on the dollar. The company was on the verge of bankruptcy when this agreement was reached, and it is probable that the reorganization will be effected.

New Haven, Conn.—The East Haven Mfg. Co., which is located in the centre of that town, has just purchased the business of the American Introductory Co., of Greenwich Street, New York, and has in-

creased its capital stock from \$12,000 to \$40,000. The company will be reorganized at a meeting to be held in a few days. The company is remodelling its plant and will greatly increase its capacity. The East Haven Mfg. Co. organized with William H. Hosley as president, and Nelson Bavier, both of East Haven, as secretary. The company has been making novelties in the Hardware line, and its business has grown to a considerable extent.

Terre Haute, Ind.—The Commercial Club has closed a deal with the owners of the Ferris Stove and Range Co., which has been a St. Louis industry for forty years, to locate in this city. Fire not long ago destroyed the plant in St. Louis, and it will be rebuilt here.

Wilmington, Del.—The American Die & Tool Co. has purchased a property in Reading, Pa., to which it proposes to move its plant as soon as the building is ready. The company has operated the plant at Nineteenth and Tatnall Streets for several years, and is enjoying a large business. The removal to Reading is stated to be due to the fact that much of the capital in the concern is there. The company employs 40 to 60 hands.

# DIETZ

(COLD BLAST)

## BLIZZARD LANTERN

COX, ENG. N.Y.

### Dietz "Blizzard" Lantern

(COLD BLAST)

THIS LANTERN is the culmination of a vast deal of experiment, and it is offered as something *extra good* in the Lantern line. We call this Lantern a "Cold Blast," for the reason that it is fed exclusively with cold air, that which comes from above, being taken in through openings between the two rings at the top.

This system of air-supply greatly stimulates combustion with the resultant extra volume and intense whiteness of its light. It is fitted with an entirely new and most effective device for raising and lowering the globe, which also locks the burner in position. It is, in point of fact, a close following of the well-known Dietz Globe Street Lamp, and, as already stated, it will meet the demand of any one seeking an "extra good" Lantern. It is fitted with 1-inch burner and "Blizzard" globe. Also made in No. 1 size with  $\frac{5}{8}$  inch wick.

### Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Framed, \$80.00; Full Nickel, \$42.00.

# PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

MANUFACTURERS

Notary, Lodge and Corporation Seals,  
Send for Catalogue. **BRIDGEPORT, CONN.**

There is no kind of advertising so  
cheap as newspaper advertising and  
there is no kind that produces such im-  
mediate and satisfactory returns. The  
posting of bills, the use of street car  
signs and the mailing of circulars costs  
infinitely more per thousand for the  
same amount of advertising and it is  
seldom so effective.

## Automatic Lingoe Machine

Producing lingoes at the rate of 60'  
per minute, flattening, rounding and  
punching the holes in the end thereof.  
The machine is applicable to a large  
variety of long pieces required to be in-  
dented, or different forms to be made,  
leaving the larger portion of the wire  
straight.

Write for Illustrated Catalogue.

244 Oliver Street, Boston, Mass.

**A  
PROFITABLE MEDIUM  
TO  
ADVERTISERS.**

Gilbert & Bennett Mfg. Co., Chicago and New York.  
[Wire Goods]: You have reason to be proud of HARDWARE'S success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

**WHY IS THE****O. K. THE BEST ROTARY  
WASHING MACHINE?**

—BECAUSE—

- 1.—It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.
- 2.—The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws).
- 3.—The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hot soap-suds, and cleaning them without rubbing them to pieces.
- 4.—This washer is made by experienced mechanics, and will out-last any other washer on the market.
- 5.—The tub has a wringer box fastened with steel brackets.
- 6.—The lid on tub closes tight, no escape of steam.

**Manufactured by H. F. BRAMMER MFG. CO.,  
DAVENPORT, IOWA.**

Sole Importers. **BOSTON, MASS.**

IT is consecutive, continuous, persistent efforts that win in advertising as in all other affairs of business. The twelfth advertisement carries part of the weight of each of the preceding eleven, and the twentieth is worth ten times the first. The first is simply an introduction, and few people remember an introduction unless subsequent meetings serve to impress it upon them. Friendship ripens slowly. This is true in social life, in business and in advertising.—*American Poultry Journal.*

Established 1836.

Every day adds to the value of news-  
paper advertising because every day  
shows more and more plainly the desire  
of newspaper publishers that adver-  
tisers shall have the best service in their  
power, and because the merchant more  
and more feels the necessity of getting  
out of the space used full value for  
what he paid for it.

The only organization that can help you, is

**THE INTERNATIONAL  
TRADE MARK  
PROTECTIVE COMPANY.**

320 Broadway, New York, N. Y.

# HARDWARE

W. H. Vance, for some years connected with the Sterling Emery Wheel Co., Tiffin, Ohio, has recently been appointed superintendent of the works of the Star Corundum Wheel Co., Detroit, Mich.

The Lalance & Grosjean factory at Woodhaven, N. Y., after having closed down for one week to clean boilers and make repairs, reopened yesterday with 2,100 employees on its payroll.

The Handy Things Co., of Chicago, are moving their plant to Ludington, Mich., where they have secured a much larger factory building. This move was necessary owing to their rapidly increasing business. A few changes have been made in the company, Charles E. Cartier, of Ludington, taking the management.

The Joseph Dixon Crucible Co., Jersey City, N. J., are sending out an interesting pamphlet descriptive of the lubricating merits of graphite on automobiles. Included in its contents are many testimonials to the benefits of graphite on gears and valves of gasoline engines, and on the chains, cylinders, slides and piston rods of other motors. Graphite compound is also mentioned, which material is used for making tight joints in steam, gas or water connections.

In our preceding issue we referred to the prize proposition of the J. Stevens Arms and Tool Co., Chicopee Falls, Mass., by which they distribute \$500 to sixty young persons for the sixty best targets made with Stevens Rifles. We learn that at the request of many contestants, the time limit has been placed at October 31st instead of October 1st, October being one of the best months in the year for shooting. They have already received a large number of targets, and the extension of time will be enthusiastically welcomed.

H. M. Sanders & Co., 27 and 29 Eliot Street, Boston, Mass., in order to meet the demands of a steadily increasing trade in Builders' Hardware and Tools, have been compelled to occupy the whole building at their present location. This successful evidence of their progressiveness is very pleasing to their many friends and well wishers. They have always been headquarters for Theatrical Stage Hardware, representing J. R. Clancy's theatrical supplies, in which branch of their business they are recognized as leaders.

Henry Disston & Sons, Inc., Philadelphia, have recently purchased the saw and saw tooth business established by the American Saw Co., Trenton, N. J. They have similarly acquired the Baldrige & Hogan saw plant at Cincinnati, Ohio, and are adding improvements thereto with a view of considerably enlarging its capacity. It is generally understood that the latter plant will be used as a distributing point for the firm's business throughout the Southern States, which is reported as having materially increased.

A. Van der Laan & Co., Exporters, 18 Broadway, New York, claim to have placed the largest export order for gas stoves that has ever reached this country from Continental Europe. During the month of August they shipped 575 gas stoves, and during the first week in September one order was received for 980 stoves, which will be furnished by the Criterion Mfg. Co., 443 Greenwich Street, New York. The goods measuring about 200 tons will be shipped by the Phoenix Line September 21st.

The Cleveland Pneumatic Tool Co. have opened a Chicago office at 335 Wabash Avenue, in charge of H. S. Covey, where samples of their complete line of Chipping, Beading and Caulking Hammers, the "Cleveland" Long Stroke Riveting Hammers, Piston, Rotary and Breast Drills may be seen.

At a recent meeting of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership therein:

Wm. B. Allison, 253 Broadway, New York.  
Wm. H. Russell, 253 Broadway, New York.  
Frank H. Bethell, 15 Dey Street, New York.  
Wm. E. Haskell, Tribune Building, New York.  
John N. Carbender, New Brunswick, N. J.  
Alex. Dow, 23 Park Row, New York.  
John W. Sisson, 253 Broadway, New York.  
Eugene Van Zandt, World Building, New York.  
Eliot W. Henderson, Yonkers, N. Y.  
Elisha J. Steele, Torrington, Conn.  
Francis M. Sutton, 11 Beverly Street, New York.

H. F. Brammer Mfg. Co., Davenport, Iowa, are distributing to the trade a very attractive folder of lithographic excellence, exploiting their washing machines, which have achieved so great a popularity with the trade. It is printed in several colors, giving in the various illustrations a correct idea of the machines and their respective finishes, showing the "Original Brammer," the "O. K.," one of the most popular rotary machines ever offered the trade, and the "O. I. C.," which is a pendulum machine that has achieved a wide distribution warranted by its meritorious features. The company state they have lately been compelled to quit manufacturing Fixtures and Furniture, so as to use the buildings for the Washing Machine industry so greatly on the increase. It is their intention at an early day to add an additional building to their present plant.

It is stated that Wickwire Bros., owners and operators of the large wire mills, the largest industry in Cortland, N. Y., are contemplating the erection of a new building larger than any of the others now being operated, to be used as a nail factory. The dimensions of the new building are said to be 300 by 90 feet, and it is rumored that they are negotiating with William R. Huntington, the executor of the Randall estate, for a tract of land on the north side of the Lehigh Valley tracks, on which to erect the factory. The nail industry, which has been started but a comparatively short time, has been constantly increasing, and Wickwire Bros. have contracts for 1,000 kegs a day.

The International Cutlery Co., Fremont, O., who are the proprietors of the Star Shear Works, and sole manufacturers of the Wm. Schollhorn Co., "Star" Brand Shears and Pruners, are also making full lines of "Star" Scissors, Tailors' Shears, Tinnerns' Snips, Razors and Razor Strops. These goods will be made in the same patterns as heretofore, of the best material, and in a workmanlike manner, and will be sold through the jobbing trade. The goods will be boxed and labeled the same as before, and both the old and new numbers will appear on the labels. The company advise us that they are about to issue a new catalogue, which will be very comprehensive, and that the goods will be made better, stronger, and of a better finish than in the past, and that they will be sold under an unlimited guarantee. Their factory at Fremont, O., is new and replete with the most modern machinery.

# HARDWARE

VOL. XXIII. SEPTEMBER 10, 1901. NO. 11.

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in should always follow your own name when writing to this office.** We cannot find your name on our books unless this is done.

Letters should be addressed

**HARDWARE PUBLISHING CO.,**

275 Broadway, New York.

L. E. MITCHELL,	President.
A. P. MITCHELL,	Secretary and Treasurer.
HENRY HOPKINS,	Editor.
A. E. BOLLES,	Advertising Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

Reports from trade centres show that sales during July and August have, with rare exceptions, been large in volume and of increasing importance when compared with previous years. The feeling throughout the industry is one of the most hopeful and encouraging kind, so that the Fall trade will scarcely be disturbed by the few changes in quotations made necessary on account of the labor disturbances usually noticeable during successive summers.

In the sections of the country where crops have suffered in volume from drouth conditions, the fact that higher prices on agricultural products are the rule in all the markets more than makes up to the farmer the loss he feared from short crops.

The demand from the Northwest is an excellent one and many new stocks are being purchased, the general activity in all lines being noticeable. Lessened demand on account of crop conditions affects somewhat the trade of Kansas, Missouri and parts of Nebraska. The month of August has really been a record breaker, as orders have been received by both manufacturers and jobbers in such profusion as to handicap prompt shipments even under a demand on the help for longer hours of continued employment. The goods known to be in short supply are ordered on every hand, with the firm belief that while some not unexpected delays may occur in delivery, still it cannot spoil the general business, and less kicking about delay will be prevalent when a cause so all-pervading is evident.

Manufacturers of goods depending largely on a continuous supply of such metals as are affected by labor disturbances, act with commendable caution about the booking of large and speculative specifications from single demands. Preference is given to an all-around distribution that will keep the market steady and firm and the trade fairly well supplied with stock.

Strike conditions among the chain makers affect the supplies of chain, which have already resulted in higher quotations; and while advances in wages of an abnormal character are demanded from the leading plants by men already on strike, a determination not to accede to any such demands has had the effect of organizing the manufacturers for a common cause, to resist the movement by closing plants until the men agree to a return to work under the previously prevailing conditions. An action like this would seem to make the strike of short duration.

It was generally supposed the passing of Labor Day would find the strike among the iron and steel workers dying of heart failure. It to all appearances had been growing weaker with its own disturbances within the organization, springing from a half-hearted compliance with orders from headquarters. Changes are anticipated in the affiliated members of the Amalgamated Association, which, if carried into effect, will deprive that Association of 5,000 tin-plate workers, on whose support they have mainly relied. The Tube Workers of the Federation of Labor, who joined the strike from sympathetic impulses, cannot much longer be depended on, and will doubtless early break away, the prospect for strike benefits being quite remote. Altogether the strike seems on its last legs, and almost any terms, save those of the complete disruption of the Amalgamated Association, would ere long be entertained, and the whole unfortunate business be called off.

The strike so far has not seriously affected the interests of the Hardware trade, although a much longer continuance would be detrimental to the season's business, as the small stocks of material carried through the summer are fast melting away in the manufacturing plants. Higher prices on tin-plate, sheet-iron and steel, steel hoops and bar-iron generally will soon affect current quotations on specialties in which these metals enter largely, while whole lines of goods manufactured exclusively from the scarce commodities are held at rigid discounts subject to advances naturally resulting from a brisk demand and prospects of a restricted supply.

## The National Hardware Association.

The programme for the Seventh Annual Convention of the National Hardware Association, which takes place in Cleveland October 9, 10 and 11, is in course of preparation by the hard-working but genial Secretary-Treasurer, T. James Fernley, and will soon be distributed to the members. A very attractive programme has been arranged, and in accordance with established precedent the topics discussed will be on subjects possessing trade interest and importance.

Arrangements have been made with the railroad companies who have conceded a special Convention rate for transportation, a fare and a third for the round trip, which will be good from all parts of the country. A low rate has also been established from Cleveland and Buffalo and return for the delegates desiring to visit the Pan American Exposition. The date for the use of the return ticket having been extended to October 19th, will allow the members eight days after the adjournment to enjoy this opportunity.

**C. E. Jennings & Co.'s New Catalogue.**

C. E. Jennings & Co., 101 Reade Street, New York, have recently issued a new catalogue of the superior Mechanics' Tools and Hardware Specialties manufactured and controlled by them. It is a well proportioned volume of 144 pages, bound in boards with cloth back lettered in gold. Its contents embrace a large line of important goods made by them at their factories in Port Jervis, N. Y., Hinsdale, N. H., and Yalesville, Conn. This is the most ambitious catalogue they have given the trade, and includes a number of new articles which will command the close attention of the dealer hunting for additions to his stock of goods. Among these may be mentioned a new line of Hand Saws, which will be found on page 67, marketed under the numbers 12½, 212 and A7½. Several new sets of Socket Firmer Chisels will be noted on page 42, having cocobolo handles. Some new Brace and Bit Sets on page 12 are worthy of attention. The catalogue will repay the dealer who goes carefully through its contents. It is a handsomely printed volume on good paper and well illustrated. C. E. Jennings & Co. are the sole manufacturers of tools under the following trade marks:

C. E. Jennings & Co., Jennings & Griffin Mfg. Co., L'Hommedieu, Merrill & Wilder, Watrous & Co., Noble's Mfg. Co., Brattleboro Tool Co., Passaic Mfg. Co., C. E. Jennings, E. H. Tracy, Geo. S. Wilder, Pliny Merrill, Hinsdale Mfg. Co., Excelsior Mfg. Co., Clark Tool Co.

**Porter Screen Mfg. Co.'s New Factory.**

The new \$20,000 mill at Winooski, Vt., for the Porter Screen Mfg. Co. has just reached the stage of completion. The mill replaces the one destroyed by fire something less than a year ago. It is constructed of wood, is three stories high and is probably the heaviest timbered building in that locality. It is a modern structure built with especial reference to the requirements of this large manufacturing concern. It is partitioned off by a two-foot brick fire wall on side of which will be located the paint shops and benzine and oil storehouses. The stairs are all on the outside and roofed; the elevator is also reached from the outside. This gives extra room in the building for machinery, etc., which is already being set up. The roof has an elevation of 8 feet at the centre and slopes on either side to the eaves. It is covered with gravel. The outside is novelty siding, painted red with white trimmings. The mill is 280 feet long and 60 feet wide, being considerably larger than the one burned. The location is near the side of the old mill, a high trestle giving communication from the mill to the storehouses.

**They Do a Big Business.**

It is not generally known that St. Louis has a woodenware house that does a business on a scale that is princely. It only deals with wholesale jobbing houses. They do not sell to retailers. It is a wholesale house among wholesale houses. They take the entire product of many factories all over this country, and distribute them to the jobbing trade. They distribute goods for the manufacturer to the wholesale jobber. Instead of having salesmen, the manufacturer places the goods in the hands of this mighty house. It is a small thing to say that St. Louis has the largest woodenware house in the world. Their business is so colossal that this one house does a business that is greater than the combined business of all the other wooden ware houses in America. They have a large export business with Mexico, and their traveling salesmen visit every jobbing point in this country every ten or fifteen days. They stand above all other competitors in the Eastern States, just as they do in the Western States, and enjoy the unique distinction all over the land as being the one princely house that only deals with the wholesale jobber and distributor.

**P. & F. Corbin.**

Charles M. Jarvis, who was formerly president of the Berlin Iron Bridge Co., and at a later date vice-president of the American Bridge Co., has been elected vice-president of P. & F. Corbin, New Britain, Conn. He will succeed to the active duties and responsibilities of Andrew Corbin, who has been vice-president of the company for a long time. Both Philip and Andrew Corbin, who constitute the firm, have not had as much relaxation from business as they desired for many years, and Mr. Jarvis relieving them of a large part of their responsible duties, will enable them to take a well-deserved rest. It is understood the Messrs. Corbin have no intention of separating themselves in any way from the business. Mr. Jarvis will assume the responsibilities of his position about October first.

**A New Barb Wire Mill.**

A number of the men who were in the employ of the Consolidated Barb Wire Co., at Lawrence, Kan., or were interested in the work of the plant in one way or another, when it was sold to the trust and afterwards closed down, have formed a company for the purpose of making wire fence, and ultimately resuming the manufacture of barb wire there. The company has a capital of \$60,000, and while not yet chartered half of the stock has been paid in full. The company has rented the old foundry building, alongside the Sante Fe railroad track, and convenient to the power plant from the dam, and has already commenced the putting in of machines for making wire fence. Patents for machines for making the fence, and for making barbed wire are owned by members of the company, and the machines are in course of construction. The new company begins business in the same quarters in which the Consolidated Barb Wire Co. made its beginning, and there seems to be no reason why the new concern should not grow and develop into as large a plant as the big mill closed by the trust.

**A New Nailing Machine.**

An effort is being made to organize in Deforest, Wis., a factory for manufacturing a shingling machine known as Pearson's nailer. This machine is altogether unique and bids fair to revolutionize present shingling methods. It is very small, weighing only one pound and twelve ounces. It requires no skill in operating, is simple and very durable. The operator holds it by a handle in the left hand and uses the hammer with the right. He puts the nail into a tin hopper, capable of holding several handfuls, and that is all he needs to do with them. The machine does all the rest, putting one nail at a time under an upright bolt—the "plunger," it is called—which sets the nail in the shingle. With one blow on the plunger the operator sets a nail securely in the shingle; with another the nail is driven completely in. Carpenters who have used the machine say it greatly facilitates shingling, enabling a workman to shingle nearly twice as fast as by hand and with far greater ease. It is especially useful in the Winter, for the operator can wear gloves or mittens on both hands. It can be used on a roof of any pitch as well as on a level surface and can be made for any size of nails.

The history of the machine is interesting. It was invented and patented by a Swede named Martin Pearson, who used to live in Minneapolis. One day, he saw a big, fat man shingling on a roof. He was amused at the extreme care and difficulty with which he handled the little nails and thought how much more easily he could accomplish his work with a good shingling machine. The idea of inventing such a machine at once possessed him, and never left his mind until he had invented the nailer which now bears his name. He worked at it for years, devoting several thousand dollars' worth of labor to accomplish his purpose.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

## Effect of Death of Party to an Action.

**QUESTION:** Some time ago an action was begun against my brother to foreclose a mortgage on his property. The case proceeded and on the day on which the matter came up for trial, my brother's attorney did not appear for him and I was told that my brother's default was taken, and that the judge rendered a decision in the mortgagee's favor. A few days after this, and, I have afterward learned, before judgment was entered against my brother, he died very suddenly. Kindly inform me whether this judgment can be satisfied out of my brother's estate provided the property mortgaged is not sufficient upon the sale to pay the mortgage.

**REPLY:** We are of the opinion that a case such as you describe must be governed and controlled by Section 763 and Section 1,210 of the Code of Civil Procedure. By these sections it is provided that where a party dies, as described above, the final judgment must be entered in the name of the original parties and a memorandum of the party's death must be entered in the judgment book and noted on the margin of the docket of the judgment. The section last referred to further provides that such a judgment does not become a lien upon the real property or chattels real of the decedent, but it establishes a debt to be paid in the course of administration. We are, therefore, of the opinion that the deficiency judgment entered in this case could not be satisfied out of the real property of your brother unless his personal property was insufficient to pay his debts and an order from the Surrogate was obtained allowing his real property to be sold for that purpose.

## Exorbitant Doctor's Bill - Counter Claim for Damages.

**QUESTION:** About a year or two ago I was injured while working in a factory and my arm was broken by the injuries I received. I employed a doctor, who set my arm; but the arm was set so badly that it practically never recovered its usual strength, as it should have done, and is still a constant hindrance to me in my business. The doctor only called a few times and has sent me a bill for his services rendered for over \$100. I have refused to pay the bill and he threatens to sue me. Kindly inform me whether I have no redress against this doctor for not having done his work properly, and whether I am obliged to pay this bill.

**REPLY:** If the physician brings an action against you to recover the value of his services, as a defense to this action you may show that the services were not reasonably worth the amount for which the suit is brought; and, if successful in this defense, you would not be obliged to pay the sum demanded. If you are able to establish the fact that your arm is improperly set and that the physician was negligent in performing his work, you have a cause of action against him to recover damages for the injuries received by you resulting from his negligence. This you may set up as a counter claim to the physician's action against you. If the physician should bring an action against you to recover the value of services and you can prove his negligence as above referred to, you can bring an action against him as above described. This action, however, being one for malpractice would, under a recent amendment of Section 384 of the Code of Civil Procedure, have to be brought within two years from the date such action accrued.

## Injuries by Vicious Dog.

**QUESTION:** For some time past a neighbor of mine has kept a large St. Bernard dog which has a habit of running out and barking at everybody that passes my neighbor's house. On several other occasions he has been known to bite people and is generally considered to be a fierce animal. Two weeks ago my little girl was passing my neighbor's house, the dog ran out and bit her hand so severely that amputation was necessary. Kindly inform me whether I could recover damages if I brought suit against my neighbor.

**REPLY:** We are of the opinion that under the facts stated you have a cause of action against your neighbor to recover damages for the loss of your child's services and that your child has a cause of action against your neighbor to recover damages for the injuries sustained by her. In this action you would be obliged to show that your neighbor was aware of the vicious propensities of this dog, and that after he was aware of these vicious propensities, he still continued to keep the dog and allow it to roam at large. If a person keeps an animal which is fierce by nature and the animal injures some person unlawfully, it would not be necessary to prove that the owner of the animal was aware of his vicious propensities. This proof we deem to be necessary in the case mentioned, and judging from your statement of facts, you would have no difficulty in establishing this point.

## Effect of Death of Party to Suit.

**QUESTION:** I began suit against a debtor of mine some time ago, and at the trial I received a decision in my favor. Before, however, judgment was entered against him, I heard that he had died. Kindly inform me what the effect of my debtor's death is. The suit was begun in New York City.

**REPLY:** If the cause of action is such as to survive the death of the plaintiff, and if the death of the party occurred after a decision had been rendered, but before final judgment could be entered, under the New York Code of Civil Procedure, judgment may be entered in the name of the original parties, unless some party interested desires the representatives of the deceased to be substituted in his place. Under another section of this Code, the judgment does not become a lien upon the real estate, but is only a debt to be paid in the course of the administration of the estate. If your debtor had died before the decision of the Court was rendered, it would have been necessary to apply to the Court for leave to continue the suit and substitute the executor or administrator of your debtor for the original party.

## The New Apprentice System.

The managers of the Baldwin Locomotive Works at Philadelphia have instituted a new feature in the business, which is virtually a resumption of the old apprentice system, only upon a much larger scale than used to be the case. They have divided the apprentices into three classes. The first will be composed of grammar school graduates, whose time of service will be four years. They will receive wages of 5, 7, 9 and 11 cents an hour and a bonus of \$125 at the close of their apprenticeship, and they must attend the company's night schools, and study geometry, algebra, drawing, perspective and technical courses. The second class will be composed of high school graduates, whose terms of service will be three years and the bonus \$100. These also will have to study the technical courses during a part of the term. The third class will be composed of graduates of colleges and technical schools, who will serve for two years as employees, not as apprentices, for 13 and 16 cents an hour. Such is the scheme as stated by *World's Work*.

As a result of this system, probably 1,000 competent mechanics will be turned out every year, and as all of them cannot be employed at the Baldwin Works the rest must seek positions elsewhere. They will, no doubt, obtain positions for there is always room for competent mechanics.

It will easily be perceived that this system tends to produce an exceptionally skilful class of workmen who may eventually exercise considerable influence on the labor question. The movement, if it is generally extended, will meet with opposition from labor unions which are inclined to hedge apprenticeship with obstacles, but the graduates of this system may prove too powerful for the unions and may themselves unite into a league of skilled mechanics. At any rate, the plan will prove a stimulous to technical education and thus improve the workingmen who will be less likely to be swayed by agitators, and will constitute a strong body with which rational discussion can be held with some fair chance of success.

### American Tools at the Glasgow Exhibition.

One of the most notable features of the Glasgow Exhibition, says the *Iron and Coal Trades Review*, and one which is presented on a larger scale than at any former exhibition held in this country, is the display of American machine tools made by such firms as Charles Churchill & Co., Buck & Hickman, and others. This feature was not new to those who had the opportunity of seeing over the Paris Exhibition of last year, and those who visited Chicago in 1893 had a still better opportunity of estimating the capabilities of the United States in the production of a special class of tools. But in this country no equally good chance of comparing British and American production in this line has been offered since the American began to come prominently to the front in outside markets.

The beginning of the importation into the United Kingdom of special American tools began—at least on any scale worth speaking of—at the time of the bicycle boom of ten years ago. The ingenuity of the Yankees enabled them to adapt their existing appliances to meet this new mechanical departure with notable success, the knowledge of which soon traveled to and became practically applied in Europe. It is probable that, but for this fact, British bicycle manufacturers would have had a sorry record in competition with the Germans and the United States. As it is, they have, by the aid of American appliances and methods, been able to hold their own in the markets of the world, for although the bicycle trade has lately fallen on evil times, it is probably less so in our own country than in some others. Very few new American machines have been introduced into this country during the last two years, and it may still be claimed that the best bicycle factories in this country are quite equal to those of any other.

For some time past, as we learn from the American firms of importers, the demand for American machinery has chiefly extended to gear-cutters and grinding machines, in respect of both of which American methods are coming greatly into vogue here. In lathes and in screwing machines the two countries now appear to be much more nearly on a level than they were some years ago, British toolmakers having taken a few leaves out of the book of their rivals on the other side of the Atlantic with manifest advantage. In some respects, however, the British machine-tool users are believed by the Americans to be distinctly behind. One respect is the general practice still observed of using the slotting machine, where the Americans use milling methods instead. In dealing with key-ways, for example, the British machinist very often slots the piece, while the American workman employs a key-way cutting machine, which is believed to do its work both more exactly and with less cost. Hence, very few slotting machines are to be seen in American workshops, and certainly none are kept in stock.

Again, there has been a considerable demand here for metal saws. Until recently the machine saw was much more generally used in the United States than in this country, although at the Darlington Forge and some other leading works we believe that they have long made a practice of sawing the webs of forgings with a band saw. The extent to which the saw has come into use of late for cutting metal is very remarkable. A saw is easily handled, and it is no uncommon thing to find a boy looking after ten or a dozen of them. Indeed, we have heard of one factory in London, where more than a hundred and fifty saws are looked after by ten boys.

Some claim for the minor adjuncts of a machine shop equipment, such as cutters, taps, rimmers, twist-drills, micrometer gauges, and square rods, that the Americans produce more accurate work than British manufacturers. This is a view that we do not for a moment endorse, but, of course, we cannot, at the same time, shut our eyes to the fact that there is a considerable demand for such accessories of American origin, and especially for micrometers, which are understood

to be on a much larger scale in the United States than in this country, although we believe the French were the first to produce them, and still carry on their manufacture on a considerable scale. The Americans have also created a demand in this country for the Pratt and Whitney measuring machine, which is an active rival of the Whitworth.

We believe that there are altogether about twelve firms in the United Kingdom engaged in the importation of American tools and accessories, and we are informed by one of the leading firms that last year the value of such imports into the country exceeding a million sterling.

### Fireproof Building for the New Company.

Norvell-Shapleigh Hardware Co., St. Louis, intend erecting an eight and one-half story fireproof building on the block bounded by Third and Fourth Streets, on the north side of Washington Avenue, to be occupied solely by them. It will extend 150 feet from Washington Avenue, and will be, it is said, the most thoroughly fireproof building in St. Louis. One-half of the first floor will be used as a retail store and the remainder will be used for offices for the wholesale and shipping departments. The entire second floor will be a packing-room. The eighth floor will be used for general offices and the intervening floors will be in the nature of warehouses.

One-half of the basement will also be used as a retail department in conjunction with the first floor, and the balance of space will be utilized as storage, boiler and engine rooms. It will be equipped with four freight and one passenger elevator, all surrounded by fireproof partitions. There will also be electric dumb waiters to carry parcels between the different stories. Lavatories for customers and employees will be elegantly fitted in every story, and the entire interior will be arranged for the convenience of everybody connected with the business.

The exterior will be of white terra cotta and vitrified cream-colored brick, with granitoid piers in the first story. It will be constructed on the Italian Renaissance style of architecture, and promises to be one of the handsomest buildings in the city. It was designed by Weber & Groves, architects, and is expected to rank among the foremost business buildings in the city.

### Not in the Combination.

Among the new shovel factories favorably installed for the prosecution of a rapidly expanding business, the Alton (Ill.) Shovel Factory quite recently reached its fullest running capacity, when it produced 125 dozen shovels in one day. Since the fire when the Beall Bros. plant was burned out last year at the site on Belle Street and had moved to their present location, they have been growing steadily, and now represent one of the largest manufacturing companies of miners' tools in the West. Their factory is now getting out in addition to the new shovel factory output, miners' tools of all descriptions. In the shovel factory the manufacture of the shovel is commenced from the sheet steel in its crudest form, and the handles from the unsawed logs, the perfect operating of the various machines being very interesting and instructive. One car load of shovels has already been shipped and in the future the company will ship a number of cars each week. And they have not asked or accepted any bonus from the people of Alton, either.

### One Naturally Wonders.

"Well," she said in some astonishment as she looked up from her paper, "woman certainly is invading all lines of business. A girl burglar has just been caught."

"I wonder," he commented thoughtfully, "if the time is coming when timid man will be worried at night for fear there's a woman under the bed."—*Chicago Post*.

'Xtend to every one a kindly salutation.

### Gasoline As An Illuminant.

Probably there is no field in science in which progress has proved of greater benefit to civilization than that of artificial lighting. Yet, strange as it may appear, in practically none has every innovation marking an important step forward met with more persistent opposition. The recent introduction of gasoline for illuminating purposes has proved no exception to this rule; indeed, this method of lighting is so revolutionary in its character, that it has met, not only the opposition of prejudice born of ignorance and over conservatism, but has encountered the most aggressive antagonism of existing competing interest, who see in the new illuminant a most formidable rival. This attitude can be better understood when the following facts are taken into consideration.

The present price of gasoline is about 12 cents per gallon; one quart of this fluid costing approximately 3 cents, in an Improved Welsbach Hydro Carbon Lamp will give for 3 nights of five hours each a light equal to 100 candles. In other words, for one cent a night, one can have practically city gas in its most modern and brilliant form of incandescent lighting, with less trouble than that associated with the handling of an ordinary kerosene lamp.

Under these circumstances, can any one wonder at the present violent attacks on this method of lighting?

We hear so much about the danger of using gasoline for lighting purposes, that the insurance companies oppose it, and State laws prohibit it.

What are the true facts in the case?

In accordance with a recently published statement, there are no less than three million gasoline stoves in use at present in the United States. The use of gasoline for this purpose involves exactly the same principle as its use for illumination. In both cases the gasoline is led from a tank or reservoir to the burner, then generated into vapor, mixed with air and burned in a Bunsen flame. It is, therefore, apparent that the danger connected with the use of gasoline for the one purpose can in no way differ from the danger in connection with its use for the other.

As to the opposition of the insurance companies; it has been the practice of various fire insurance underwriting associations to publish *printed approvals* of certain gasoline lamps which have been built in accordance to specifications issued by them. Insurance companies, however, are no more adverse than other business corporations to making as much money as possible, and some of them have recently displayed a disposition to take advantage of the opposition to this method of lighting to endeavor to exact an extra premium for the use of these lamps, irrespective of the fact that they still continue to accept risks permitting the use of gasoline stoves without additional charge.

The companies adopting this policy, however, are receiving their just reward, as the business of insuring property including the installation of these lamps is naturally being absorbed by such competitors who refuse to make this unjustifiable discrimination.

As to the State laws in connection with gasoline lighting; these laws without exception have been placed on the statutes *prior* to the introduction of gasoline vapor lamps, some of them dating back as far as 1874. They do not apply nor were they intended to apply in any sense, to the use of gasoline in hydro-carbon lamps, but were enacted to prevent the use of this fluid, at a period when it had practically no commercial value as a substitute for or an adulteration of kerosene in wick lamps.

As indisputable evidence of this, when recently the Oil Inspectors of the State of Ohio in a literal interpretation of an old State law on this point, caused to be published a circular warning all users of gasoline for illuminating purposes in that State to discontinue its use as same was in violation of the State law, or suffer the penalty of arrest and fine; the Welsbach Co. demanded a test case of this law and the mat-

ter was placed before State Attorney-General Sheets, who handed down a decision to the effect that the existing State law was not intended to apply to these lamps, and that they represented progressive science and possessed improved mechanism that removed all elements of danger.

Gasoline as an illuminant has unquestionably come to stay, for its advantages are many and apparent. In common with other illuminants, however, it requires proper handling; but to argue against its use from this standpoint is as manifestly unjust as to condemn the use of coal oil, illuminating gas or electricity, because, under some conditions, the two former have been known to explode and a "live wire," improperly insulated, has unpleasant possibilities.

### Consolidation in the Rule Industry.

The H. Chapin's Son Co., of Pine Meadow, Conn., and Stephens & Co., of Riverton, Conn., have consolidated their respective plants, and the Riverton plant will be moved to Pine Meadow at once and established in the buildings of the Chapin Co. This is a combination formed of the two oldest rule manufacturing concerns in the United States and ought to make a very strong company with great increase in productive capacity. This is also the representing of the three generations of Chapins and Stevens who have had thorough training in the art of rule manufacturing. H. Chapin, the grandfather of the present members of the firm of that name, established the factory at Pine Meadow in 1826 when he began the manufacturing of a full line of carpenters' planes. This branch of the business is still being carried on extensively by the present company. A few years later Mr. Chapin added the manufacturing of plumbs and levels and some other minor lines, which are still among the products of the present company. In 1835 he began the manufacturing of folding carpenters' rules. In 1853 L. C. Stephens and his son, D. H. Stephens, started in business at Pine Meadow, manufacturing rules under the firm name of L. C. Stephens & Co., where they were very successful. They moved to New Hartford in 1859, and in 1861 adopted the style of Stephens & Co., which firm name has been used ever since. They remained in New Hartford until 1864, when they moved farther up the Farmington River and located at Riverton, where they have since been established. F. L. Stephens, son of D. H. Stephens, worked side by side with his father and became thoroughly familiar with the business. In 1876 he became permanently connected with the company and he has since been successfully identified with the same. To go back to the Chapin company, E. M. Chapin, who died in December, 1896, was associated with the business as his father's employee until the early '60's, when he became sole owner of the company, carrying on the business with success until the time of his death. E. M. Chapin's sons, H. M. and F. M., during their early school days, became more or less familiar with the details of the business during vacation periods, and since 1895, H. M. Chapin has been fully identified with the expanding business. In 1889 F. M. Chapin also became permanently connected with its success. After October 1st, next, this concern will be known as The Chapin-Stephens Co. The personnel of the company doubtless will be somewhat changed from that of the present Chapin Co. It is very probable that R. E. Holmes will continue to be president, H. M. Chapin, vice-president, F. M. Chapin, treasurer, and F. L. Stephens as secretary. The present board of directors will probably be increased somewhat, and it is understood that the Chapin-Stephens Co. are to open a store at 80 Chambers Street, New York, under the management of V. P. Humason, who is identified with the new company, and has represented Stephens & Co., for the last twenty-five years.

Edward—That sign, "Closed, taking stock," has been in that window more than a week.

Ned—Oh, that's all right. The shop is closed; the sheriff is taking the stock.—*Ex.*

### History of U. S. Patent Office.

The preparation of a complete history of the Patent Office has just been begun under an order of Commissioner of Patents Frederick I. Allen, which directs that certain Patent Office examiners shall co-operate with the chief clerk, E. V. Shepard, in the compilation of its material. Mr. Shepard has been appointed editor-in-chief on account of his eminent scientific and literary, as well as linguistical qualifications.

Mr. Shepard has decided the work shall be divided into seven general parts, and the work has been commenced in earnest. The parts are, first, preliminary work, such as arranging title page, preface signed by the Commissioner, giving reasons for publication, etc., synopsis of the work, history of the patent system, history of the Patent Office, organization and administrative details, aims and advantages of the system, brief analysis of the present laws, and a comparison of the same with foreign patent laws; view of the patent system from a commercial standpoint, miscellaneous topics and alphabetical index.

The book, which will perhaps contain 500 pages, will be profusely illustrated and issued in as handsome a form as available funds will permit. It is expected that the work will be ready for free distribution at the St. Louis Exposition.

Calls from legislators for specific reports on certain subjects, communications from all parts of the world requesting information not readily obtainable, an increasing need for such a text book within the office, and the surprising lack of knowledge on the part of the public concerning the work of the Patent Office are all factors which induced the Commissioner of Patents to decide upon the publication. Scattered articles, in various magazines and trade papers are about all that can be found in print, at the present time, concerning the origin, development and present condition of the "Great Civilizer," as the Patent Office has been called.

No individual could afford to publish such a work, even if the information, and this is very doubtful, could be collected, except by bringing all the machinery of the Government into play to draw together from official sources, as well as from private ones, the multitude of facts, which must be authentic.

For the purpose of securing such information as is not available in the office, the following order has been issued:

All persons interested in the publication, as contemplated, of a complete history of the United States Office, who have in their possession illustrations, documents, printed articles or valuable information bearing upon the subject, are cordially invited to communicate with this office concerning the same. Such communications should state clearly the nature of the material, and should be addressed to the Chief Clerk, United States Patent Office, and marked "History of Patent Office." Material loaned to this office for the desired purpose, will be handled with care and will be returned if desired.

Information is especially desired from the public concerning the biographies of the various superintendents and commissioners, also likenesses of Superintendents John D. Craig and Thomas Johns; all the rest of these officials have their portraits preserved in the Patent Office. Cuts of the Patent Office building while a branch under the State Department, in Philadelphia and in Washington, are also desired, together with any interesting matter concerning the same.

It is the intention to start with the royal monopolies which were bestowed upon court favorites, and show how they differed from the present patents, which are given to an individual, as a reward of genius, the just payment for his time and labor. Probably the part of work that will prove of greatest interest to manufacturers and inventors is that part which will show that without such reward no inventions would flourish, offering striking illustrations of this fact by a reference to certain articles before the time of history, undeveloped for centuries, such as the microscope, which was used in Nineveh; the burning glass, used by the early Greeks; the compass, used by the Chinese. Perhaps the only publica-

tion of the Patent Office that has ever attempted to give any idea of the remarkable growth of the industries under the stimulus of the Patent System is the report of ex-Assistant Commissioner of Patents Arthur P. Greely for the year 1897, which reviews the new industries that have sprung up in the past quarter century and shows beyond question the great value of the patent law in stimulating not only inventions, but also investments in the industrial arts. In the opinion of many students, the patent system of this country (which is by far the best in the world) has done more to increase our industrial wealth than our protective tariff laws, and it is confidently believed that the forthcoming history will put this fact beyond question.

### Consolidation of Axe Plants.

The beginning of the end of the town of East Douglass comes in the announcement of the directors of the American Axe & Tool Co. of the concentration of all the plants of the company to Glassport, Pa. The reason for this change is to secure the manufacturing and shipping advantages of the Pittsburgh district, says the Worcester, Mass., *Spy*. The directors of the trust have decided upon this move after a great deal of deliberation. The trust will dismantle those mills now isolated, and, as they claim, obsolete. Among the plants included in the sweeping change are those at East Douglass, Mass., Ballston, N. Y., Augusta, Me., and Lewistown, Pa. The only reason advanced by the trust for practically wiping out these small towns is the cheapening of the product. The works at Glassport are comparatively new. They were built on the Monongahela River more in the nature of an experiment at first. The great success the trust has experienced in getting out its product quicker and cheaper has led up to the new condition of things. All the thirteen plants now under control by the trust are to be concentrated at Glassport where the work of constructing the new buildings has begun.

The axe trust will certainly swing with vigor on one of Worcester County's best industries. The principal industry of the "Axe Town" of the State is doomed to pass away, and when it does, it also means the passing of East Douglass. The mill at present produces axes and edge tools in large quantities. Its production is as great, if not greater, than any of the other plants controlled by the trust.

Since the construction of the new plant at Glassport, Pa., the latter plant has, of course, turned out a larger amount of goods than the Worcester County plant. The East Douglass axe mill employs in the neighborhood of 150 hands who will remove with their families with the mill. This will take over half of the population of the town at one swoop. The town now has a population of 2,000, has three churches, a high school and a common school. The only other industries of which the town boasts are a saw mill, grist mill and woollen mills. They will afford employment for a number, but the axe mill has always furnished the best wages for the working class.

A large percentage of the stock of the American Axe & Tool Co. is held in Pittsburgh by Charles Lockhart and Charles W. Hubbard, and it was principally through their influence that the works at Glassport were established. The owners of the individual plants protested against the removal for a long time owing to the fact that settlements had been created by the different works, that the total property value depended upon the operation of the plants and that the brands of the various individual plants had become famous. The directors met in Pittsburgh several times before the decision to locate at Glassport was finally taken. It is said that the economies secured at the plant have proven so successful that the company are now perfectly willing to dismantle their old plants.

Denver has a pretty young woman so charmingly cross-eyed that she can entertain three young men at once and send them away each thinking that he monopolized most of her attention during the evening.—*Ex.*

### Warren's Patent Hardware Store Equipment.

The merchant who so thoroughly equips his store with modern facilities for progressive business, and provides every incentive for exertion by the adoption of such progressive methods as we show in the course of this article, need have no fear as to satisfactory results. Never before has so much constructive genius been displayed to facilitate inquiry as to wants and expedite sales as to convenience than are now provided by the J. D. Warren Mfg. Co., of Masonic Temple, Chicago, in this latest development of their mechanical ability. The views presented on this and the opposite page are illustrations taken from photographs of the store of the Gray & Dudley Hardware Co., Nashville, Tenn., the entire equipment of which was installed by the above manufacturing concern.

When arranged as illustrated, the display becomes at once a public instructor, so forcible that the common, cheap article is forgotten, as the finer and richer pattern standing by the cheap one draws almost, if not quite exclusive attention to itself. This form of display affords the public information they wish, of which the merchant or salesman is unaware, as it permits one at his leisure and convenience, without making his wants known, to see for himself the finer and better patterns, of which he at first might not think of buying. Through the fascination the better articles hold for the buyer, they of themselves elevate him to a higher grade in his choice; the result necessarily following that a much finer and more profitable grade supplants cheap goods.

Scarcely any line is more susceptible to attractive display than Hardware, because of its intricate diversity of patterns and finishes. But for this very reason, its proper and orderly presentation is difficult. Without the use of specially designed shelving the task becomes impossible. The showing of goods in the crude way they appear in the original boxes, with parts missing and disorder manifest on every hand, is no display at all. By means of the Warren shelving the goods are seen in a few seconds, and sales are accomplished in a tithe of the time previously required.

The inexperienced clerk who would hesitate to sell a common japanned thumb latch, with its several parts, finds the most intricate lock, and the various parts of a "trim," which to him has had a mystifying, appalling sound, are arranged, under the Warren method, in simple, consecutive compartments, from which he can readily sell—the front door lock being in one, the inside door lock following next to it, while the astragal face sliding door lock is in the third, and the plain face in a fourth compartment, with a sample of each kind in front of each drawer or compartment. This arrangement also enables the expert salesman in charge to give his time direct to the general work of the department, relieving him of the minor details.

The cabinets are built in sections and rest on the base or floor sections. The exterior consists entirely of light, antique oak, ornamental top moulding, with the joined ends forming

a perfect alignment as if built together. The artistic effect is greatly enhanced by a superb ingrain finish, which gives each cabinet an appearance elegantly in keeping with all of its valuable technical qualities.

There is no guess work in the Warren shelving, the material, and finish, the strength of every part, the correct proportion of spaces, the adaptation to the various goods, the different sizes and partitions of drawers, the method of keeping track of goods, costs, selling prices, etc., and all details of

FIG. 1.—WARREN'S NEW SYSTEM OF MOUNTED BUILDERS' HARDWARE ON FULL SIZE AND MINIATURE DOORS, IN OPERATION, ON LEFT SIDE AT FRONT ENTRANCE.

convenience and system are carefully considered and tested before embodied in it.

In making each outfit, if it is discovered any improvement

FIG. 2.—WARREN'S PATENT GLASS FRONT DRAWER AXE COUNTER, OR BASE.

can be made in any parts, or a better form of arrangement devised, the next outfit will have the benefit of such discovery. One single purpose exists, being that of combining new ideas and forms that experience develops with suitable mechanical construction, that in and of themselves bring long desired

relief from the care and worry of the immensity of detail that Hardware embodies.

This infinitude of detail some merchants treat by ignoring to the detriment of their success; others seek to overcome it as best they can.

The satisfaction the Warren shelving renders is indicated

arrangement for exhibiting the fine locks, door sets, and other builders' Hardware is simply beautiful, and the most convenient we have ever seen.

We are especially pleased with the plate glass front counters to set on the floor, showing a sample of the goods on the front, such as axes, hatchets, etc., with drawers under the counters to pull out. We think this is one of the best things

FIG. 3.—VIEW OF STORE EQUIPPED EXCLUSIVELY WITH WARREN'S SECTIONAL CABINET FIXTURES, SHOWING ALL SELLING SPACE UTILIZED WITH DISPLAYED SAMPLES AND STOCK IN PATENT GLASS FRONT DRAWERS, OR GLASS COMPARTMENTS

by one of the many letters received by the manufacturers, which reads as follows:

NASHVILLE, TENN., July 18th, 1900.

Messrs. J. D. Warren Mfg. Co., Chicago, Ill.:

DEAR SIR:—Your system of plate glass front shelving has now all been installed on the first floor of our new building,

ever brought out in the design of counters. Our salesmen also like the arrangement for showing guns, sporting goods and hollow ware very much. Your gun rack is decidedly the most convenient, and is the best manner in which to show guns we have ever seen in a retail store.

We do not see how any first-class, modern retail Hardware store can afford to be without your shelving. We wish to re-

FIG. 4.—WARREN'S GLASS FRONT INTERCHANGEABLE INSET TOOL CABINET.

FIG. 5.

FIG. 6.

and to say that we are much pleased with this shelving would scarcely express our feelings. From the brass railings and the mirrored posts at the front door on College Street, back to the lockers and belt racks on Market Street, it is the most complete piece of work in every sense of the word. The

peat that it is handsomest, best arranged and most convenient system of fixtures we have ever seen and wish to take this opportunity to offer you our most sincere thanks for the deep interest you soon to have taken in our building and contract all along. We assure you we appreciate it very much indeed,

and we wish you a great deal of success in your business, as you certainly have the finest goods in the country for Hardware people.

With best wishes, we remain,

Yours truly,

GRAY & DUDLEY HARDWARE CO.,

Per J. M. Gray, Jr., Vice-Pres.

Fig. 1 illustrates the first section located at the left hand in entering the store. Immediately back of the encased window forming the front as it appears in part, is the builders' Hardware department, furnishing a convenient and new method for architects, contractors, builders and others to select from, with brass railing forming a separate salesroom, a Japanese screen being used if complete seclusion is desired.

Here are exhibited samples of various door "trims" mounted on full size modern design doors, including sliding, inside, and front, all in operation, with miniature doors for all standard patterns carried, forming the facing of compartments containing the stock of each article separately, and extending along the side wall whatever distance the stock requires. Each door being made of a different wood; over thirty varieties are shown.

Each cabinet is finished with sliding glass doors in front, protecting the samples from dust and tarnish. Auxiliary small goods are in separate patent glass front drawers. Special patterns mounted on separate boards, carried in drawers in the bases, thus enabling any employee to show the various patterns and find the stock easily.

Fig. 2 is a clever arrangement for axes, each drawer containing one dozen assorted sizes. This method being used for various lines throughout.

Fig. 3 shows a complete combination of the various cabinets as they match together perfectly when placed in position the view represented being nineteen feet high and over two hundred feet in depth.

Fig. 4 has a drop glass front that forms both a display space and shelf for the various goods in drawers back of the display front.

Figs. 5 and 6 represent the goods as they appear sampled back of glass in the drop leaf attached to each inset. These consist of cases, so to speak, that correspond in size to the drawer spaces in the cabinets. The cases contain various sizes of drawers (each resting on a shelf) suited to large varieties of lines that require small spaces so that goods in small drawers encompassed with this case, can be placed in any desired location that any large drawer may occupy.

### The Popular "Nickel Plate."

The Nickel Plate Road is rapidly becoming a popular route for traveling men. It combines fast time with excellent Pullman and dining car service, and every attention is given that will contribute to the comfort and safety of passengers. Three daily express trains from West to East and East to West make a very satisfactory day or night service, as the pleasure of the passenger may require.

The dining car service is of the highest order of excellence. Regular meals are served at prices ranging from thirty-five (35) cents to \$1, but no higher. These meals are served under the American Individual Club Plan, and consist of carefully compiled menus, published in booklet form, giving the traveler a great variety of selections of the best the market affords. The Nickel Plate Road deserves success, and we believe is attaining it.

### The Cut Direct.

Wife: "Poor hubby, he has such a boil on his right arm I had to cut his meat for him at breakfast."

Sympathizer: "Where is he now?"

Wife: "Gone to the doctor's to have it lanced."

Sympathizer: "Oh, I see! You've given the medical adviser the job you had at breakfast."

## PATENTS.

The following list of Patents, Trade Marks and Designs of interests to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

### PATENTS EXPIRED AUG. 19, 1901.

- 303,610. KNOB ATTACHMENT, J. R. Binns, South Windham, Conn.
- 303,633. FRICTION HINGE, W. E. Gard, Meriden, Conn.
- 303,647. VISE ATTACHMENT, T. E. King, Westport, Conn.
- 303,730. SASH-CORD FASTENER, F. S. Heiser, Brooklyn, N. Y.
- 303,752. MONKEY-WRENCH, G. B. Sanborn, Bristol, N. H.

### PATENTS ISSUED AUG. 20, 1901.

- 680,710. SASH-PULLEY FRAME, H. Harig, Cincinnati, O.
- 680,730. LIFTING JACK, W. H. Olliver, Chicago, Ill.
- 680,742. SPANNER OR PIPE WRENCH, D. Stewart, Govan, Scotland.
- 680,749. SASH-FASTENER, Otis Williams, St. Johnsville, N. Y.
- 680,811. SASH-LOCK, John N. Rees, Louisville, Ky.
- 680,866. PIPE CUTTER, Albert Katzki, Erie, Pa.
- 680,910. CAN-OPENER, John L. Conner, Washington, D. C.

### PATENTS EXPIRED AUG. 26, 1901.

- 303,988. LOCK, G. B. Cowles, New Britain, Conn.
- 304,033. COAL HOD, H. S. Reynolds, assignor to the Iron Clad Mfg. Co., New York, N. Y.
- 304,041. LOCK FOR SLIDING DOORS, W. E. Sparks, New Britain, Conn., assignor to P. and F. Corbin, same place.
- 304,081. BLIND-HINGE, R. H. Dorn, Rochester, N. Y.
- 304,101. RATCHET TOOL-HANDLE, C. Hermann, Bristol, R. I.
- 304,111. DOUBLE BAKING PAN, A. T. Laube, Huron, S. Dak.
- 304,141. POCKET KNIFE, J. R. Smith, Waterbury, Conn., assignor to the Waterbury Button Co., same place.

### PATENTS ISSUED AUG. 27, 1901.

- 681,249. WINDOW SCREEN, T. Nevins, St. Louis, Mo.
- 681,263. CANDLE LAMP, T. C. Richards, Winsted, Conn.
- 681,261. WRENCH, O. E. Pontius, Wauseon, Ohio.
- 681,303. COMBINED DUST PAN AND BROOM HOLDER, J. V. Dille, Kansas City, Mo.
- 681,320. MEASURING FAUCET, H. Q. Hood, Carthage, Mo.
- 681,327. SCISSORS, F. W. Kleever, Jr., Solingen, Germany
- 681,388. DETACHABLE ALLIGATOR JAW FOR WRENCHES, H. B. Clark, Derry Station, Pa.

### PATENTS EXPIRED SEPT. 2, 1901.

- 304,291. PAINT-PAIL, J. T. Brien, Hoosic Falls, N. Y.
- 304,299. CORKSCREW, W. Crabb, Newark, N. J.
- 304,307. METHOD OF CUTTING THREE-CORNERED FILES, C. M. Fairbanks, Lincoln, R. I.
- 304,311. STOVE-PIPE DAMPER, W. F. Green, Troy, N. Y.
- 304,320. COMBINATION TOOL, G. Hibbard and H. H. Hibbard, Wheeling, W. Va.
- 304,519. BIT-BRACE, J. S. Fray, Bridgeport, Conn.

### PATENTS ISSUED SEPT. 3, 1901.

- 681,740. COMBINED SCISSORS AND COMB FOR BARBERS' USE, J. Sansone, Des Moines, Iowa.
- 681,745. ROLL PAPER CUTTER, J. R. Seawright, Atlanta, Ga.
- 681,751. WRENCH, A. H. F. Straub, Lacenter, Wash.
- 681,756. NIPPERS, B. L. Toquette, Westport, Conn.
- 681,755. RAILWAY TRACK LIFTING JACK, G. F. Bently, Fort Worth, Tex.
- 681,863. SASH BALANCE, J. Wallace and A. Hilton, assignors to the International Burglar Proof Sash Balance and Lock Co., same place.
- 681,910. PIPE WRENCH, F. P. Galvin, Buffalo, N. Y.

### Accomplishments of Engineering.

What has been done by civil engineers for the country in general, and for the city in particular, was excellently set forth in the address of J. James R. Croes, president of the American Society of Civil Engineers, at the recent annual convention of that body. After reviewing the accomplishments of individuals, Mr. Croes summarized the work of the profession in the following words:

The most thorough exemplar of the condition of civil engineering at the beginning of the twentieth century is the modern office building in a great city. One hundred years ago the man of enterprise who resided fifty miles from a large city and wished to consult an engineer regarding a project for a new canal, arose before daylight, struck a spark from his flint and steel, which, falling on a scrap of tinder, was blown by him into flame and from that a tallow dip was lighted. In the same primitive manner the wood fire was kindled on the kitchen hearth and his breakfast was cooked in a pot and kettle suspended from the iron crane in the fireplace. Entering the cumbrous stage coach, hung on leather springs, which passed the door, he was driven over muddy roads, crossing the narrow streams on wooden trestle bridges and navigable rivers on a ferry boat, the paddle wheels of which were turned by a mule on a treadmill. At last he was landed in the city, where he walked through dirty streets paved with cobble stones until he reached his destination, a plain three-story brick building, founded on sand, with a damp cellar and a cesspool in the back yard. Entering an extremely dark hall, he climbed a wooden staircase and was ushered into a neat room, rag-carpeted, warmed by a wood fire on an open hearth and lighted by a sperm oil lamp with one wick, for it was dark by this time. No wonder that before proceeding to business he was glad to take a good stiff noggin of New England rum.

To-day his grandson, living at the old homestead, while comfortably eating his breakfast, which has been cooked over a gas range, reads in his morning paper that the high dam of the irrigation reservoir in Arizona, in which he is interested, sprang a leak the day before, and he telegraphs to his engineer in the city that he will meet him at his office at noon. Then, striking a match, he lights the lamp of his automobile, which is fed by petroleum brought 200 miles underground in pipes from the wells, rolls over macadamized roads to the railroad station, where he boards a luxuriously appointed train, by which he is carried above all highways, through tunnels, under rivers, or across them on long span steel bridges, and in an hour is deposited in the heart of the city, where he has choice of proceeding to his destination through clean and asphalt-paved streets in electric surface cars at nine miles an hour, elevated steam cars at twelve miles an hour, or through well lighted and ventilated tunnels at fifteen miles an hour. Reaching the spot his grandfather had visited, he finds there a huge and highly decorated building, twenty or more stories high. Founded on the primeval rock, far below the surface of the natural ground, the superjacent strata of compressible material having been penetrated by caissons of sheet metal sunk by the use of air compressed by powerful pumps driven by steam or electricity generated at a power station half a mile or more away, and these caissons filled with a manufactured rock such as the ordinary processes of nature would require millions of years to produce, there is erected a cage of steel, the composition of which has been specified, and the form and mode of construction of which have been so computed that the force of the elements cannot overthrow the structure or even cause it to sway perceptibly. Towering above the courts of law, the temples of religion, and the palaces of the arts, the meshes of this mighty cage are filled with products of the earth, the mine and the forest, transformed so as to be strong and light and incombustible, and all interwoven with pipes and wires, each in its proper place and noted on the plans. In one set of these pipes is pure water, which has been collected from a mountain area of igneous geological

formation, depopulated and free from swamps, on which a record of the daily rainfall is kept, and in which impounding reservoirs have been constructed by masonry dams across its valleys. From these reservoirs the water, after filtration through clean sand, is conveyed thirty or forty miles through steel or masonry conduits to covered reservoirs, whence it is drawn as needed through cast-iron pipes to the building where it is to be used, and there distributed to all parts of it, chilled nearly to the freezing point through one system of pipes or heated nearly to the boiling point through another system. Another set of pipes carries steam, which, passing through radiators, keeps the temperature of the air throughout the building at the proper standard for comfort.

Sanitary conveniences are provided everywhere, and all wastes are consumed within the building by the surplus heat generated, leaving only ashes to be removed. Wires convey electric currents to all points, so that the occupant of a room, sitting at his desk, can by the touch of a button ventilate his apartment, illuminate it, call a messenger, be kept informed of every fluctuation of the markets, converse with anybody who is not "busy" within forty miles of where he sits, and, if entirely "up-to-date," can require his autograph and portrait to be reproduced before his eyes for identification. He dictates his correspondence and his memoranda, and "takes his pen in hand" only to sign his name. He need not leave his seat except to consult the photograph hanging on his wall, which shows to him the latest condition of the mine, the railroad, the arid lands irrigated, the swamps reclaimed, the bridge in progress, the steamship, the waterworks, the tunnel or the railroad, the dam, the filter or the sewage works, the town, the machine, the power plant or the manufacturing establishment in which he is most interested. Entering the brilliantly lighted hallway of this building, the air of which is kept in circulation by the plunging up or down of half a dozen elevators, the visitor is lifted at a speed of 500 feet a minute past floor after floor crowded with the offices of financiers, managers and promoters of traffic and of trade, lawyers, chemists, contractors, manufacturers, to the headquarters of the controlling genius of the whole organism, the civil engineer. For he it is to whom all the members of this microcosm must apply for aid and advice in the successful operation of their respective occupations. It is not his to mechanically transform elements into matter, or matter into other forms, or to show how energy may be produced, but to direct the application of energy to the various forms of matter, original or produced, in such way as to bring about the most satisfactory results in the most speedy and economical manner.

### Many Began at the Bottom.

*The Railway Age*, in its Biographical Directory of Railway Officials, gives some interesting facts in connection with the men who have climbed to the top from the lowest round in the ladder that leads to success in railroad circles. There are approximately 5,000 names mentioned in the directory. Under a classification, which includes in the operating department telegraph operators, clerks, brakemen, and shop men, there appear to be over 1,700, or over one-fourth of the whole, who have entered the service in the department, and by far the largest portion of these, or over 600, began as telegraph operators. There are also now filling places at the heads of their department, 166 who began as brakemen, and 62 who were originally firemen; about 400 who began as mechanics in the shops, and over 200 who were laborers. The general office and accounting department furnished about 1,100, the engineering department 900, and the various clerical and subordinate positions in the traffic department about 850.

She—How nice to be at home again. What a crowd there was. I don't suppose Mr. Bankier knew one-half of his guests.

He—Didn't he, though! Why, he had four detectives in evening clothes there.

## RECENT TRADE PUBLICATIONS.

BROWN & SHARPE MANUFACTURING Co., Providence, R. I., have prepared an extremely handy little volume, to which they give the title of "A Hand-book for Apprenticed Machinists." This volume, which was issued primarily for the use of apprentices in their own shop, upon its appearance became so popular a *vade mecum* that it created a call for its more extended distribution, so they decided to print a sufficient number in order that they might be placed on the market to meet this unexpected demand. They will be glad to receive orders for the same through the Hardware trade, and urge that the knowledge of its existence be extended through the manufacturing districts. The present edition contains considerable more information than did the first edition published a year or two ago, and, as stated in the preface, while the work does not go into mathematical details, it gives the necessary information, so that a young man who is serving his time at the machinist's trade may increase his competence by becoming familiar with its contents. The book is worthy of a more extended review, in which its many technical points can be pointed out, but we would urge that the Hardware dealers send for a sample copy, it being published at fifty cents, which will more readily acquaint them with its saleable merits. It can be obtained through the trade, or will be mailed direct from the works on receipt of price.

REMINGTON ARMS Co., Ilion, N. Y. Pamphlet catalogue of oblong form, 48 pages, printed on excellent paper and fully illustrated throughout, being their 1901 revised price list and catalogue of their production of military and sporting guns, single and double barrel, special sporting and target rifles, match rifles, baby carbines, and illustrating their entire line of new model small bore military rifles for smokeless powder, the Remington-Lee small bore magazine rifles, together with their line of target pistols, double derringers and re-loading tools. Included in its contents are illustrations of all the various parts of the Remington guns with cost prices complete for everything shown. It is certainly a desirable catalogue for the trade handling these sporting lines.

OHIO TOOL Co., Columbus, Ohio, and Auburn, N. Y., issue a catalogue dated 1901 of their large and extended line of Planes, Plane Irons, Chisels, Auger Bits, Drawing Knives, Bench and Hand Screws, Handles and Coopers' Wood and Edge Tools. The company is one of the oldest in the country manufacturing the line of goods shown in this catalogue. Having factories at Columbus, O., and Auburn, N. Y., provides them with increased facilities to ship goods promptly, and they take pride in the fact that at the Paris Exposition in 1900 they received the highest award given on Carpenters' Tools. They are the sole owners of the "Auburn Tool Co.," "Star," "New York Tool Co.," "Thistle" and all other brands owned and used by the Auburn Tool Co., well remembered by the veteran Hardware dealer. Their product includes not only the old styles of Planes, but also the new and latest improved Adjustable Planes, either all iron or with wood bottom; also Block Planes in large variety; Wood Bench and Hand Screws, Cabinet Makers' Clamps and Chisel, File, Auger and Plane Handles in all the varieties handled by the Hardware trade. Included in their products, they make a full line of Coopers' and Carpenters' Edge Tools in the shape of Drawing Knives, Framing Chisels and Carpenters' Slicks and Socket and Tang Firmer Chisels in dozens or in sets. This catalogue should be in the hands of all Hardware dealers desiring to keep up to date.

CALDWELL MFG. Co., Rochester, N. Y., have recently issued a 1901 catalogue and price list, covering their line of popular Hardware specialties. It is a 22-page pamphlet printed on fine coated paper and handsomely illustrated. Among the goods exploited are the Caldwell Sash Balance, Caldwell Car and Marine Window Balances, Show and Wall Case Balances, Acme Aluminum Bronze Sash Ribbon, the Empire Side Sash Lock, the Acme Casement Window Fasteners, and the Acme Automatic Basement Window Catches and Fasteners with the manufacture of which they have been long identified. Included in the contents will be found the Empire Door Holder, the Acme Door Stop, the Caldwell Door Holder and Door Spring and Screen Door Check. They are the manufacturers of the Gem Nutmeg Grater, which is one of the most popular rotary graters handled by the Hardware trade; Jumbo Nut Cracker, and they also manufacture the Up-To-Date Trousers and Skirt Hangers. All these goods are fully illustrated and described, and list prices for each article are given, trade discounts being furnished on application.

NATIONAL VISE AND TOOL WORKS, INC., Camden, N. J. (Tower & Lyon, 95 Chambers Street, New York). Pamphlet catalogue of 17 pages of the line of goods manufactured by this concern, among which are prominent Snediker's Quick-Acting Leg Vises, Snediker's XL Rapid Bench Vises and Stephens' Quick Acting Bench Vises. These goods have been before the Hardware trade for some time, and have achieved a popularity that is recognized wherever they have been introduced. The goods are fully illustrated and described, and form a line of considerable importance. The up-to-date Hardware dealer will consider his own interests by writing for the same if not already familiar with these labor-saving goods.

CARBORUNDUM Co., Niagara Falls, N. Y., distribute in connection with their exhibit, an excellent plan of the Pan-American Exposition grounds, showing everything of importance needed in a guide for the convenience of visitors. It has been received with pleasure by the visitors who have made their location their headquarters, and will be considered an exceedingly useful article, especially as it is printed in vest-pocket size, making it extremely handy to use.

J. W. DUNHAM & SON, Berea, Ohio. Oblong catalogue of 16 pages, devoted to their Flexible Frame and Jointed Frame Soil Pulverizer and Packer. These goods are fully illustrated and described, and important advantages over competing makes are dwelt upon. Included in the catalogue are a large number of testimonials from parties who have been successful with these products. This company also make Hapd Corn Shellers in several varieties, and also Hand Lawn Rollers.

WASHINGTON TOOL Co., Owatonna, Minn. Illustrated catalogue of 16 pages, envelope size, in which is given a full description of the Larson Blacksmiths' Pincer, one of the important specialties controlled by this concern, and which is made in a number of varieties. Illustrations are given showing its adaptation to various uses, making it a very serviceable tool for general purposes. They are made in seven sizes, running from 6 to 14 inches in length. Included in the contents of this catalogue will be found the Kaplan Patented Circular Pole Saw calculated for sawing poles, logs or cord wood; Kaplan three and four-horse Eveners; Kaplan Barrel and Box Cart; also a Metal Bucket Pump Plunger, etc.

# NEW GOODS AND SPECIALTIES.

## The Larson Pincer.

Washington Tool Co., Owatonna, Minn., are calling the attention of the Hardware trade to the Larson Combination Pincer No. 3, of which we give a reduced illustration in this article. The tool proper is 14 inches in length. It is calculated for the use of farmers and all kinds of mechanics, one arm of the handles being provided on the end with a screwdriver, the other arm with a point, the latter of which is used for prying plow lays into position to receive bolts. It is provided with a bolt holder attachment, not shown in the cut, which in use presses against the head of the plow bolt to prevent its turning when being held firmly by one of the handles of the Pincers, while the left hand of a person is

THE LARSON PINCER.

using a wrench to remove a rusty nail from the bolt. The long handles provide considerable leverage, enabling any nail or staple to be drawn readily. They are made in a number of sizes, running from 6 to 14 inches in length, the list prices on which range from \$8.50 to \$12 per dozen, subject to a trade discount which will be furnished to dealers on application.

## Perfection Saw Clamp.

Tower & Lyon, 95 Chambers Street, New York, are placing on the market through the Hardware trade the Perfection Saw Clamp, an illustration of which we present herewith. This is an admirable article for the purpose, as it is instantly

PERFECTION SAW CLAMP.

adjustable, holds a saw firmly, and can be quickly attached or detached from the bench. It may be firmly attached to a bench or any other wooden object in a second without the necessity of using either screws or nails. In its action the saw is self-adjusted. Clamps or releases the same instantly. It is light, yet strong, and compactly constructed, and will commend itself to the Hardware dealer who carries appliances of this description in stock.

## Excelsior Tool Chest.

R. Bliss Mfg. Co., Pawtucket, R. I., are calling the attention of the Hardware trade to their superior line of Tool Chests. One of the most complete of their popular line of medium priced tool chests we give an illustration of herewith. These Tool Chests have been greatly improved, and

EXCELSIOR TOOL CHEST.

are made of selected chestnut stock, having heavy black walnut moldings, are each provided with a large tray and fitted with lock and key and bronze handles. They are put up for the trade in six sizes, running from 14 to 25 inches long, 6½ to 12½ inches wide, and 5 to 9 inches deep. The several sizes contain 20, 25, 34, 46, 61 and 72 tools, the one in the illustration containing 61 tools. All sizes given above are inside measure. Those of the trade desiring to handle a better grade of tool chests than is usually furnished for the ordinary run of holiday trade, will find the above line fill about all the possible requirements of a medium priced tool chest.

## Hamilton Rifle No. 15.

Hamilton Rifle Co., Plymouth, Mich., are placing upon the market something entirely new in the way of a single Shot Rifle, which is calculated to do good service, being constructed of the best material, and not intended to be sold as a boys' toy rifle. The one shown in our illustrations is the No. 15, 22 calibre. The frame and working parts of the Rifle are of steel, having a beautiful blue-black gun finish,

and fitted with a handsome walnut stock which readily "takes down" by a single thumb screw. This admits of its being carried in an ordinary suit case or traveling bag. The barrel is claimed to be rifled with great care in order to insure absolute accuracy. The method of attachment of frame gives it rigidity, strength and perfect alignment. The simplicity of the lever action to load and throw out exploded shell, possesses features of originality which are commendable. By throwing open lever, the steel tube which carries the firing-

pin has a sight feed and repeats from the muzzle. This makes it shoot with a great degree of strength. It has a walnut stock, which is finely finished. Each rifle is accurately sighted before leaving the factory.

#### Hand Made Axes.

The United States Edge Tool Co., Cattaraugus, N. Y., whose advertisement appears in another column, manufacture all the leading patterns of axes, including the Michigan, Day-

FIG. 1.

ton, Delaware, Kentucky, Ohio, Western, Yankee, Falling, Swamping, Fire, Ice and others of special importance. They state that their guarantee covers all axes with flaws or that are too hard or soft. As they have been in the business for nearly a quarter of a century and have always made strictly high grade hand-made axes, from the best quality of

FIG. 2.

loading. The Hamilton Rifles are fully guaranteed by the manufacturers against defects of material and workmanship. In Fig. 2 the gun is shown knocked-down for packing, indicating the readiness with which this may be accomplished. Its full length is 28½ inches, distance between sights 16 inches. It is fitted with rear peep sight, having adjustment both ways. It is chambered for 22 calibre short and long R. F. cartridges, and is but two pounds in weight.

#### "Warrior" Air Rifle.

J. A. Dubuar Mfg. Co., Northville, Mich., are placing upon the market their newly improved "Warrior" Air Rifle, which is made in two styles: The Single Shot, which is illustrated in Fig. 1 and the Repeating shown in Fig. 2. The Single Shot is finished in a handsome and artistic manner, making

steel and tempered by hand, a guarantee of such a character possesses a special value.

#### The B. Ruby Range.

South Erie Iron Works, Erie, Pa., are the manufacturers of the B. Ruby Range, the advertisement of which will be found on page 4 of this issue. The B. Ruby (Fig 1) is a four-holed range made in two sizes with three tops, that is, the No. 8-18 has 8-inch griddles with an 18-inch square oven by 12 inches high, and the No. 8-20 has 8-inch and 9-inch covers respectively, with oven 20 inches square by 12½ inches high. The oven is ventilated by small draft slide in oven door. The fire box is large and deep, and is fitted with either cast or brick linings, as may be desired. The grates can also be removed without disturbing any part of the linings, by simply removing the plate inside of fire door and taking out the duplex grate, and sliding in either the flat or wood grate,

FIG. 2.—WARRIOR REPEATING RIFLE.

FIG. 1.—WARRIOR SINGLE SHOT RIFLE.

it extremely attractive in appearance, all the parts being made of steel, which not only makes the gun of very light weight, but also increases its strength and durability, as it is claimed the shank and side plates cannot be broken. The metal parts are entirely nickel-plated, while the stock is finely finished, and all the parts are made interchangeable so that any repairs, that may be at any time necessary, may be readily obtained. It is constructed to lock automatically, shoots B. B. shot, and weighs but 29 ounces. The Repeating "Warrior" Air Rifle, while possessing all the merits mentioned above in regard to material, is simple in construction,

as the case requires. It will also burn wood 18 inches and 20 inches in length. The reservoir is portable, and can be attached or detached if necessary in about five minutes. To make a Square Range out of a Reservoir Range, the only additional piece of casting that it requires is the top part of the right end, which is in two pieces, and when reservoir is detached by simply unscrewing two bolts on top, and lifting out entire reservoir casing and inserting the top half of right end, you have the square. To make a Reservoir Range of a Square Range it only requires the reservoir casing. Remove the top half of right casting, hang in the casing, tighten up

two bolts, and you have a Reservoir Range. They also furnish either copper or cast enameled reservoirs. To heat the reservoir turn the reservoir damper towards the oven, which lets the heat circulate under reservoir. It is then forced under oven and out into the chimney, so that at no time

provided with nickel edges, which are not shown herewith, as they are among the improvements since the cut was made. In Fig. 2 is given a sectional view of the Range, by which the principal points referred to in the above description are more readily understood.

THE B. RUBY RANGE.

FIG 2.—SECTIONAL VIEW OF RANGE.

is there any heat wasted, as it must at all times pass underneath oven before it enters the chimney. Further, either one of the dampers, whether the direct or the reservoir damper, can be easily replaced without disturbing any other part of the stoves, as the same are in two parts, and are bolted together to simplify the same. The B. Ruby Range is also

#### No Doubt Of It.

Bookkeeper: "He said he felt like throwing up his job when he was told he had to go to Europe."

Stenographer: "Did he?"

Bookkeeper: "No, he went all right, but when he returned he said he thought he had thrown up everything else."

### Managers of Men.

There is one class of workers for whom a large and constant demand exists and who, therefore, need never starve for lack of employment. These are the men who have the managing faculty. Like the poet, the successful managers of men, as a general rule, are "born, not made." Their ability is rather intuitive than acquired. They have the faculty, knack, aptitude, call it what one will, of administration and leadership, which commands the respect of those they control. They are necessarily men of strong will, but are not arbitrary or oppressive in the exercise of it. Tact and good judgment are essential to the make-up of such men. They must have a good understanding of men and be able to discriminate between those who must be driven and those who can be led, adapting their methods of dealing with each accordingly. To do this properly requires a close study of the dispositions of men, which the good manager will not fail to make. He must, moreover, so rule himself that he may pursue his course with even temper, never allowing his passions to get the better of his good judgment and strict sense of justice. Ruling by force of character and showing himself fair minded, sympathetic and devoted to his duty, he will command the respect and obedience of those under him. The domineering, passionate, arrogant slave driver may command men through fear, but he has no hold on them, and the moment they have the opportunity to do so they will rebel. He is not a good manager of men, although for a time they may obey him with alacrity. The really successful manager has his men so trained that they will do their duty as well in his absence as when he is present. A marked quality of such a manager is one that he shares with all the great men of history, the faculty of picking out good assistants and inspiring them to use their best efforts. This is not the least among the qualifications essential to good managership. A loyal, enthusiastic corps of lieutenants and a contented, cheerful rank and file of willing workers are secured by the methods above outlined, as used by the good manager, to the profit of all concerned.—*Metal Worker*.

### Cruel Fate of the Unskilled Laborers.

One of the most cruel features of a strike by an organization of skilled workmen is the fact that it abandons the unskilled laborers, who are not members of the union, to unaided idleness and want, says the *Railway Age*. With a thousand highly paid members of the Amalgamated Association of Steel, Iron and Tin Workers in a given mill, there may be three thousand or more unskilled workmen, earning the common laboring man's wages, who are not admitted to the privilege and protection of the great organization. When a strike throws all these thousands into enforced idleness the union men are immediately made the recipients of "strike benefits," raised by levying upon those members who are allowed to remain at work, in order to support their striking brethren. But the far greater number of men whose occupation is taken away without action of their own are abandoned to their fate.

If, as is claimed, the labor union is the expression of a philanthropic and unselfish spirit towards its members, it seems, on the other hand, to manifest an intensely selfish and unfeeling spirit toward humanity at large, when it votes want and misery upon others far greater in numbers and more needy than those for whom they are sacrificed. Here seems to be a serious defect in the principle of trade unionism, commonly illustrated, which no platitudes about "fighting for labor's rights" and "fighting for our personal liberties" can cover or cure. The reasons for a strike need to be very urgent to justify its leaders in bringing calamity upon the many for the assumed benefit of the few. Such reasons are conspicuously wanting in the present steel strike.

### The Coal Resources of the Philippines.

Coal has been discovered in the Philippine Archipelago in paying quantities. In fact, coal mines have been in operation there for years. The records show, says the *Iron and Coal Trades Review*, that coal miners secured good coal from the mines as far back as 100 years ago. The Spanish used to mine with somewhat crude devices. Several parties are now at work getting coal which they can dispose of at very high prices, because the imported coal ranges from £2 to £2 10s. per ton. At the Uling Uling mines on Cebu Island the coal deposits are of a good quality. The coals are found in seams which are broken frequently, and much contorted.

There are good specimens of coals to be found on the islands of Negros as well. There are copper mines there, too, also without owners, apparently. The natives work the coal mines occasionally, but they never think of putting in machinery for the permanent operation of the mines which might bring rich returns to them. They wait until some definite business transpires in the coal line, such as the landing of a steamship to get coal, and then a bargain is made by which the natives mine and haul the coal to the water.

On Mindanao Island there are excellent coalfields, but the natives there are not to be trusted. They are on the watch for detached parties of miners, whom they waylay and rob and often kill. The miners on Mindanao therefore go heavily armed so as to ward off attacks from the Moros. On Gimeras Island, which is near Panay, a little coal has been discovered, but not in paying quantities. On Luzon, the coal mines of the southern portion are exceedingly rich. They are being worked by foreign capital, and much of the product is used by the power users of the country. The firemen and engineers of the sugar mills, the wood-working plants, the railroad and the other coal-consuming industries of the country are beginning to purchase these coals for use instead of burning wood or cocoa-nut husks as formerly.

On Panay, coal has been located in the interior, near Santa Barbara. The Spanish and other owners of mines for getting coal are all employing Filipino and Chinese labor at very low prices, and hardly any power contrivances are employed in any form. There are no conveying devices, and all of the coal has to be carried through shafts and elevated by manual labor, just as the coal mines are run in Japan. There is an excellent chance in the islands for the introduction of modern coal mining and handling machinery, and evidently the time is near when capitalists will put in the necessary power and machinery plants.

The writer visited iron foundries in and about the cities of Manila and Iloilo, which had been operated for forty or fifty years under Spanish management. These foundries have been supplied with ores from the mines of Luzon, Mindanao, Panay, Cebu, Leyte, Negros and one or more other islands of the Philippine group. The iron ore is also found in broken bodies. There is a demand for iron in the Philippines. There are many iron bridges to be repaired, for these have been neglected for one-half or a quarter of a century. Some of these bridges still hold good, having been built by some of the best concerns in Europe. They need repairs and strengthening with rods and braces. There are brass foundries in operation, and there is room for more iron foundries. Americans have opened machine shops, in which all sorts of mining, metal-working and wood-working machinery is overhauled and repaired, and shops are constantly in want of bar-iron and castings. The native foundries are turning out parts of ploughs and harvesting machinery which is cast by them. They also made parts of iron stoves. Iron posts and other pieces for work in buildings are also in demand.

•

Simon Frost says: "One balky mule'll block up the hull road; he won't neither go forwards, nor backwards, nor git to one side, an' let the willin' ones pass nor lay down an' let 'em walk over him."

## REVIEW OF THE MARKETS.

**Wire Nails:** A steady demand is the noticeable feature of the Wire Nail market. Prices do not seem to give as much anxiety as the date of delivery, and whether all sizes will come in the first shipment. Prices are firm, as outside competition, while sufficiently aggressive, does not as yet promise any great volume in production. Quotations remain without change as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.30
"    less than carload lots.....	2.35
To retailers in carload lots.....	2.40
"    less than carload lots.....	2.50

**New York.** The demand for Wire Nails is steady and the market firm. The following prices represent the market:

To retailers, carload lots on dock.....	\$2.53
Small lots at store.....	2.60

**Cut Nails:** An advance of five cents a keg was agreed upon at the recent monthly meeting of the Cut Nail Association. The general impression among the trade regarding the advance is not a favorable one, for prices advanced under similar pressure have not invariably been sustained. The advance, if deemed necessary on account of increasing value of plates, should have been larger or not at all, five cent advances being regarded as too light to be successfully obtained. Prices are quoted as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	\$2.10 to 2.15
Carload lots.....	2.05

**New York.** In the local market prices are as follows:

To jobbers in carload lots on dock.....	\$2.18
"    less than carload lots on dock.....	2.23
Small lots from store.....	2.25 to 2.30

**Barb Wire:** The Barb Wire market continues in about the same condition as previously reported. The demand in the West keeps up fairly, as stocks accumulate at trade centres in no great volume, and shipments from the mills are more generally made with less delay than was previously the case. Quotations remain as previously noted, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
"    "    Galvanized.....	2.90
"    less than carload lots, Painted.....	2.65
"    "    Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
"    "    less than carload lots, Painted.....	2.80
"    "    Galvanized.....	3.00
"    "    Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** The generally steady demand for this important staple keeps up most satisfactorily, small stocks if any being obtainable, as the mills are as much behind on filling orders with commendable promptness as ever. The demand has been a good one all through the summer season, increasing in briskness of late for Fall requirements. Quotations remain as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
"    less than carload lots.....	2.30	2.70
To retailers in carlots.....	2.35	2.75
"    less than carload lots.....	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Nos.	Plain Fence Wire Advances (Catch Weights).	Galvanized.
6 to 9.....	Base.....	\$0.40 extra.
10.....	\$0.05 advance over base.....	.40 "
11.....	.10 " " " " " " " "	.40 "
12 and 12½.....	.15 " " " " " " " "	.40 "
13.....	.25 " " " " " " " "	.40 "
14.....	.25 " " " " " " " "	.40 "
15.....	.45 " " " " " " " "	.75 "
16.....	.55 " " " " " " " "	.75 "
17.....	.70 " " " " " " " "	1.00 "
18.....	.85 " " " " " " " "	1.00 "

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Coil Chain:** The following advances in prices of Coil Chain are announced by the Standard Chain Co. For cask lots, f. o. b. Pittsburgh, quotations are as follows:

3-16	¼	5-16	¾	7-16
\$7.75	5.80	4.85	4.00	3.85
¾	9-16	¾	11-16 to 1	
\$3.75	3.55	3.55	3.50	

An advance of 25 cents per 100 pounds is added on orders of less than Cask lots.

**Carriage Bolts, Machine Bolts, Etc.** Advances have recently been made in the prices of Common Carriage Bolts, Bolt Ends, etc., superinduced by increasing cost not only of labor, but of raw material. The market is claimed to possess a greater degree of firmness at these quotations than would be the case if the demand were not a well-sustained one under the most favorable conditions. The usual concessions for large specifications may be anticipated.

Common Carriage Bolts.....	65 and 5	%
Machine bolts with H. P. or C. P. Plain Nuts..	70 and 5	%
Machine Bolts with C. & T. Nuts.....	65 and 10	%
Machine Bolts without Nuts.....	70 and 15	%
Machine Bolts, Blanks.....	70 and 5	%
Bolt Ends with H. P. or C. P. Plain Nuts.....	70 and 7½	%
Bolt Ends with C. & T. Nuts.....	65 and 12½	%
G. P. Coach Screws.....	75 and 10	%
Cone Point Lag Screws.....	75 and 15	%
Skein Screws.....	75 and 10	%
Forged Set Screws and Tap Bolts.....	60	%
Plow Bolts and Guard Bolts.....	60 and 10	%
Stud Bolts.....	70 and 10	%

**Nuts:** Some slight changes have been made in the current prices of Cold Punched and Hot Punched Nuts. They represent an advance in quotations founded on the scarcity of raw material, and the increasing difficulty in obtaining supplies. Quotations are as follows, from which some concession is made for large requisitions:

	Off list.
Cold Punched Plain Blank, Square.....	\$5.10
Cold Punched Plain Blank, Hexagon.....	5.50
C. T. & R. Blank, Square.....	5.30
C. T. & R. Blank, Hexagon.....	6.00
Cold Punched Plain Tapped, Square.....	4.90
Cold Tapped Plain Tapped, Hexagon.....	5.30
C. T. & R. Tapped, Square.....	5.10
C. T. & R. Tapped, Hexagon.....	5.80
Hot Pressed, Square Blank.....	5.30
Hot Pressed, Hexagon Blank.....	6.00
Hot Pressed, Square Tapped.....	5.20
Hot Pressed, Hexagon Tapped.....	5.90

**Hot Air Registers:** The manufacturers of Hot Air Registers have adopted a new list on these goods, which went into effect September 2. The new prices show an advance amounting to about 10 per cent. in some of the larger sizes of Registers, while others are unchanged. It is really a readjustment rather than a general advance in prices.

Black Japanned Registers, Ventilators, Faces and Borders.....	70%
White Japanned Registers, Ventilators and Faces (separate list)...	70%
Bronzed Finishes in imitation of Gold, Silver, Copper and Bronze.	70%
Nickel Plated.....	70%
Electroplated in Brass, Bronze, Copper, Oxidized Silver.....	70%
Wall Frames.....	70%
Heavy Round Gratings.....	70%
Ventilating Plates.....	70%
Cold Air Inlets.....	70%
White Porcelain Enamel Registers, Ventilators, Faces and Borders.	60%
Solid Brass and Bronze Metal Registers, Ventilators, Faces and Borders.....	50%
Dampers.....	50%
Soapstone Borders.....	30%
Slate Borders.....	50%

The terms are 2 per cent. cash 10 days, and 60 days net. No freight is allowed. On all orders of less than \$10 the cost of boxing will be added.

**Cordage:** While prices on rope have been to some extent irregular owing to the varying qualities of Cordage now on the market, it may safely be stated prices are firmer for best grades, and quotations generally higher than for some time past. With an increasing demand the following quotations represent the market for best makes of Manila and Sisal Rope:

	Pounds.	Cents.
Manila, 7-16 inch and larger.....	10	
$\frac{1}{2}$ inch.....	10 $\frac{1}{2}$	
$\frac{3}{4}$ inch and 5-16.....	11	
Sisal, 7-16 inch and larger.....	7 $\frac{1}{2}$	
$\frac{1}{2}$ inch.....	8	
$\frac{3}{4}$ inch and 5-16 inch.....	8 $\frac{1}{2}$	
Lath Yarn, medium and coarse.....	7 $\frac{1}{2}$

**Linseed Oil:** The following are the latest quotations by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....	51 cents per gallon.
In lots of 5 barrels or more.....	50 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Bolled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 85 cents per gallon.	

#### THE SAGINAW TRADE.

August as a business month, has always been looked upon very unfavorably. It has always been the month of lassitude, dull days and mad dogs. The conditions this year have been different in every way. No lassitude, no dull days, and dogs are too busy to get mad. The steel strike as a disturbing element has not got its work in to any great extent, tubing and sheets being about the only staples that bothered the jobber. Our salesmen report few customers away from home, showing that they have been unable to find time to visit the Pan American and other outside attractions. Business is most satisfactory and do not think we may look for any different state of affairs for some time to come.

MORLEY BROS.

#### THE PITTSBURGH TRADE.

August was a busy month for Pittsburgh Hardware jobbers, and September opens with the same condition. The strike in the steel mills has not grown to such size as to seriously affect the purchasing power of the community, so that retail merchants generally are buying as usual, only a few places refusing to place orders. The scarcity of sheet and bar iron is quite an inconvenience. Jobbers who did not get in early stocks of coal hods, stove pipe, elbows, gas stoves, etc., must wait until the material can be secured by makers, and this may mean the loss of a season's business.

Building is very active, especially in the larger class of business and residence properties.

The outlook for a good Fall trade is excellent.

LOGAN-GREGG HARDWARE CO.

#### THE ST. PAUL TRADE.

When Black and Galvanized Sheets, Tin Plate and some very staple goods made from these are very scarce, it makes doing business rather uncomfortable—without considering the fact that what goods of this class we have on hand we can get a higher price for than if the supply were normal, we would rather have the small profits and the ability to fill orders promptly, than the present condition. Our section is turning out a very comfortable amount of business, with a good prospect of a continuance for the next three months of plenty to do. Prices are firm and collections getting better every day. We claim that we are fairly contented.

C. W. HACKETT HARDWARE CO.

#### THE MINNEAPOLIS TRADE.

This is State Fair week. The Twin Cities are crowded with people from the surrounding country, many of them making it a particular point each year to come here at this time to enjoy the Fair and transact business.

These visitors are not confined to Minnesota alone, but many come from the Dakotas, Iowa and Wisconsin, and even as far away as Montana.

An additional attraction this year was the visit of Vice-President Roosevelt, and quite unexpectedly General Miles.

Roosevelt appeals to the Westerner and received a very cordial reception.

General Miles appeals to many of us in a different way, for we believe that he has not had a fair show.

The writer has not been able to contribute to your columns for a number of weeks on account of illness.

During this time there have been a few changes in the trade in the city.

The Gardner-Warner Hardware Co. has dissolved, and is now being run as two separate establishments, and consequently there is sharp competition after the trade held by the old concern, which affects the entire city trade.

The Thompson Hardware Co., the new jobbing concern that had hardly commenced business, have sold out to the Nelson & Bouquet Hardware Co., who have come up here from Owatonna, where they were doing a jobbing business.

The T. M. Roberts Supply House, a catalogue concern, has come to grief, now being in the hands of receivers. What will be done with the concern ultimately is uncertain. There is to be a meeting of the creditors in Chicago this week to consider the proposition.

The trade in almost all lines throughout the Northwest has been affected by the method pursued by this house. We do not believe that there is any one who is conducting a retail business that regrets the fact that they are in trouble.

It seems quite likely the failure will prove to be a disastrous one. Merchandise to the amount of something like \$400,000 has been put up for collateral to the banks, and on which there will be quite a material shrinkage, the margin will be wiped out on account of bankers' desire to realize on their collateral, while the stock in store consists to quite an extent of broken lots and sizes and a large variety of miscellaneous goods that would be of little value to any one who was not going to continue this general line, and not very valuable then.

Their affairs are found to be in a very mixed up condition, and how this concern succeeded in getting credit to the extent of \$700,000 is rather a surprise to every one who knows anything about the affairs.

We believe we have already mentioned the fact that a new heavy Hardware house has opened here, the Greeg-Seager Co. The members of this concern were formerly identified with the Minneapolis Iron Store Co.

This gives us five strictly jobbing Hardware concerns, three of which, however, do not handle shelf Hardware, but in place of that are in the heavy Hardware, iron and carriage wood work line.

There is a great deal of building; probably more than ever before.

"X. F."  
GOLD MEDAL.

PROVIDENCE, R. I., U. S. A.

It is almost impossible to hire mechanics of any kind, almost every one reporting that they are full of business.

Farmers are getting themselves into excellent shape. Good fair crops in all lines. Not a bumper crop, but fair, and in all sections as far as we know, no spotted places where there are no crops or where there has been extensive damage by hail. Good all over. Wheat, flax and corn all bring from fair to good prices.

Farm lands are steadily advancing. The writer saw lands a few days ago that were sold for \$26 per acre, that only a few years ago were sold for \$7 and \$8, and we were told that parties buying lands at this figure and renting them out to tenants were getting returns of 18 per cent. on their money. Not a bad investment by any means.

Building material here is rather high. Lumber quite so, still there is a very heavy demand. We understand the price of lumber has eased up a little on the quiet. This will help building operations considerably, particularly in the country.

There is no reason why jobbers and retailers in all lines should not be having the best business generally that they have ever had.

W. K. MORISON, & Co.

#### THE SAN FRANCISCO TRADE.

On second thought the general conference meeting of the retail trade, anent the local strike situation, referred to in this correspondence in the August 25th issue of *Hardware*, purposely failed to materialize, the second thought impression on the part of the trade being, said Secretary H. C. Bennett, of the San Francisco and Oakland Retail Hardware Association, that there was nothing more to be done in the association line than had been earnestly attempted. It is now admitted that no line of industry has suffered more than building by the labor dissensions. Although not directly interested in the conflict, construction has been well nigh prevented by the sympathetic strike of the lumber and sand teamsters. This has prevented the transportation of material, and has added largely to the number of idle men. Small quantities of lumber and brick are now being moved, but the real solution of the difficulty lies in the affiliation of the lumber and sand teamsters with the Building Council, with the interests of which it is most naturally and intimately allied, rather than with the Brotherhood of Teamsters, with which they have been acting. Two minor troubles in the building trades have been adjusted. The painters have been granted an increase of wages from \$3 to \$3.50 for an eight-hour day, and the strike of the structural ironworkers has been settled by an arrangement under which in the future they will do nine hours' work inside and eight hours' work a day outside, with no reduction of wages. While considerable

building is being held back by the indisposition of owners to proceed until the "striking" situation is completely cleared up, plans continue to be accepted and contracts for building continue to be let and recorded. While this condition carries with it no immediate solace for the builders' Hardware trade, it bears future encouragement.

Throughout the interior of the Pacific Coast territory, jobbers say, trade is not only unmarred by any unusual disturbance, but better than the record-breaking score of a year ago, and collections, as a rule, are keeping ahead of maturity.

Election of officers for the second year's administration of the San Francisco and Oakland Retail Hardware Association resulted as follows: President, Frank Osborn, of the Osborn Hardware and Tool Co.; Secretary, H. C. Bennett, of Bennett Bros.; Treasurer, Joost Bros.; Executive Committee, S. V. Armstrong, of Philpot & Armstrong, and W. A. Etting, and from the Oakland side of the bay, F. Rettingstein.

INDUSTRIAL PRESS ASSOCIATION.

#### THE GRAPHITE TRADE.

Once we said it was always interesting to read over the trade letters in *Hardware*. Lately it has not been less interesting, but it has been quite comforting. Comforting because misery likes company. It is humiliating to be behind in orders and it is expensive. Then it gets worse when one's own salesmen come at you with "Called on John Smith today and he says, 'what in thunder are you coming in here to-day for an order for when you haven't shipped the last order I gave you?'"

Therefore, it is some comfort when we read in *Hardware* letter from Biddle Hardware Co., in which they say:

"There is increasing difficulty in getting goods, and some staples, like door and window screens, poultry netting, shovels, etc., are almost out of the market, while on wire cloth stocks are largely broken, if not exhausted. Factories complain it is impossible to fill orders promptly, and the largest wire interest has issued another circular letter saying they are from four to six weeks behind on their orders, and all orders must take their turn," and other letters of like tenor. It is indeed a great country, and to quote The Lockwood-Taylor Hardware Co.:

"Prosperity has cured the fads, and killed the cranks, and given time to attend to legitimate business, and the people seem to be contented to have it so."

Never before have we experienced such a crush of business. We have put addition to addition and still we are behind in our orders, yet, happily, we think through no want of foresight or work on our part.

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

### Making It Warm for the Chinese.

Three American stove manufacturers are going into the business of making stoves for the Chinese. In order to compete in this market, it is necessary that the stoves be made after the Celestials' own pattern. For the past year these manufacturers have been trying to get a sample stove from China to be used as a model for the stoves to be made for this trade. Guy Morrison Walker, of this city, has been engaged by these firms to secure a sample stove. After many months of effort, he has succeeded in getting a small model of a Chinese stove carved out of wood and used in the Celestial kingdom as a plaything. From this will be made working models of the Chinese stoves.

The Peninsular Stove Co., of Detroit, the Reading Stove Co., of Reading, Pa., and the Colby Stove Co., of New York, are the manufactories which intend to make the Chinese stoves. For many years American stove firms have been trying to introduce their goods on the Chinese markets. Their efforts have been practically fruitless, however. To the Oriental mind the American stove looks no more like a stove than anything else one could imagine. It is next to impossible to make a native of China believe that the American stove is a stove. An enterprising agent can sell the native a stove under representations that it is a new fangled gocar or an ice chest, but a stove—no; the Chinaman will not, cannot, believe that that queer-shaped cast-iron thing is intended for the consumption of coal and the utilization of heat.

Consequently, it has been found necessary to imitate the Chinese stoves in order to sell them to the Chinese. The model as received by Mr. Walker is not a grotesque affair. It much resembles the old-fashioned barrel-shaped stove, which can be seen to-day in the village store. It has no stove pipe and no doors, however. This crude affair will be imitated by American stove makers and sold to the Chinese.

The top of the Chinese stove is large enough to permit of cooking. A round hole in this plate is the only chimney

which the stove can boast. The nature of the fuel used is such that there is no smoke, but the noxious gases escape into the room. The Chinese stove in operation is a dangerous piece of mechanism. One of them was the cause of the death of Col. York, of the German army, during the recent operations of the allied forces. He was smothered to death by the gas which escaped from a stove in his room.

The Chinese do not burn ordinary coal. They are too saving for that. They take hard coal dust and mix it with clay, making coal balls, which burn without smoke and without ash. The hard coal lumps are ground up in order to manufacture these coal balls. Mr. Walker, in addition to the sample stove, also received a handful of these coal balls. These will be analyzed by the stove manufacturers and a similar product made with which to experiment with the stoves to be made after the Chinese pattern. This will be done so that the American product can compete in every way with the stoves.—*Cleveland Plain Dealer.*

New England Hardware Dealers' Association will hold their first Autumn meeting at the United States Hotel, Boston, on Wednesday, September 11th, promptly at 5 p. m. A business meeting will take place immediately after the dinner, which will be served at 5:15. The Committee on Entertainment consisting of George J. Mulhall, Austin H. Decatur and Henry M. Sanders, of Boston, have not reported the programme, but it is expected that matters of interest will be presented as usual.

## Plan for Abatement of Smoke in the New York Central Tunnel.

The management of the New York Central & Hudson River R. R. has prepared a plan for alleviating the smoke trouble in the Park Avenue tunnel, in New York, concerning which so much has lately been published. This tunnel consists of three bores, the central one carrying two tracks and the smaller passage on either side one track. The central tunnel is ventilated at intervals by large openings into Park Avenue, enclosed and partly concealed from view by railings and hedges. The side tunnels are ventilated by side openings into the central one. According to the plan reported the operation of steam locomotives in the side tunnels will be abandoned and the tracks through the same will be operated entirely by electric locomotives. From a convenient point above the

Grand Central Station the grade of the side tunnels will be lowered, so as to form an underground loop passing into and across the station below the main tracks. By this plan it is expected that the enormous suburban traffic that enters and goes out of the Grand Central Station daily will simplify the handling of the through trains, which, it is contended, must be drawn by steam locomotives. A more comprehensive system of ventilation is to be applied to the central division of the tunnel, and it is thought that the through trains will not be close enough together to create trouble from smoke.

"An' twenty cents for lemonade——"

"Twenty cents! It isn't worth it!"

# DIETZ

No. 3  
STREET LAMP

COX, ENG. N.Y.

## Dietz No. 3 Street Lamp

Has a shining record of 20 years.

We now fit this lamp with a new style fount holding oil sufficient to burn 24 hours.

It is offered as an effectual antidote for "outer darkness," and is thoroughly well made on scientific principles.

It will give more light than most gas-burning lamps, do it cheaper, and do it with kerosene (coal oil).

It can be lit and regulated from the outside; can continue in business despite the wind; can and will give you entire satisfaction by reason of its absolute reliability.

A few of these lamps around the grounds of a summer resort add materially to its attractiveness.

One lamp kept burning all night in the yard, is a better protection against thieves than a watch dog.

It takes a No. 3 Globe and 1 1/2 in. wick.

We also make this lamp with a bail to hang, and without the socket, and call it: "Dietz No. 3 Globe Tubular Hanging Lamp."

We have a special catalogue for this lamp; also one showing our very full and complete line of out-door lamps and lanterns, and are glad to send them (free) to those interested.

For sale by

### The Theatrical Side of Keeping Shop.

The successful retail merchant ought to have something of the showman in his equipment, for he is, in his own way, a provider of entertainment. The capacity for drawing curious folks and sightseers has been an important factor in the success of most of the Barnums of the retail world—is still a factor in the success of the modern department store. The showman who keeps shop must never allow his theatrical instincts to overtop his regard for hard facts, but if he will use odd methods to color his facts, he will be in a fair way to dominate his own locality, especially if he is doing business in a small city. Goods are potent attractions in themselves. The fact that the most *blase* mortal will stop to look into show windows is proof of this truth. But there are many means, great and small, of setting people to thinking and talking of your store, thought and talk being preludes to visits and purchases.

The automobile delivery wagon is still a novelty in many towns, and can be made a six months' wonder before it loses its charm. Every housewife would order a bill of goods for the sake of having the vehicle stop before her door. Moving stairways have recently been built into several New York and Brooklyn department stores, carrying passengers to and from first floor and basement. It is probable that half of the women in these cities have dragged the other feminine half in for a ride on the new convenience, and while many went away without purchasing, many others spent money and became regular customers. At the very least a large number became familiar with the place.

One of the new hotels in New York keeps several bellboys busy showing visitors through the building from sub-cellar to weather-vane. None of them ever register or bring direct returns to the hostelry, yet the proprietor is not only willing, but anxious, that they shall be shown every courtesy. A small pamphlet containing pictures, statistics of ice, gallons of water and sides of beef used daily is given to all who avail themselves of this chance for free inspection of the building, and as most of them come from remote parts of the country, his establishment is one of the most famous in the United States. Every visitor is forever after a walking encyclopedia of and advertisement for the hotel.

Store methods are constantly changing. The cash carrier system that was novel in New York ten years ago is an everyday matter in villages now. But the metropolitan stores have new wonders, many of which could be transplanted to smaller cities and made the "talk of the town" until every last unit of the population had been in to inspect them in person. Anything that will draw sightseers is a material advertisement, provided the proprietor of the store knows how to turn the notoriety to his advantage. The retailer who has the strain of showman in him is seldom at a loss for means of keeping his townsmen talking.—JAMES H. COLLINS, in *Printers' Ink*.

"Sponger says he can drink any number of cocktails."  
"Any given number, you mean."

### A Growing Industry.

Among the many things manufactured in which St. Louis leads the country, that of washing machines is the most remarkable. Two large houses turn out 80,000 every year, and one of these concerns, the H. F. Brammer Mfg. Co., also has a factory at Davenport, Iowa, which makes 40,000 more.

**TOWER & LYON, 95 Chambers St. NEW YORK.**

The machines manufactured at Davenport are of several styles, one being a rotary machine, which works with a fly-wheel, one works with a pendulum and another kind works with a lever. There are, therefore, more washing machines made in St. Louis than in any other city. They are made for family use only, and are rapidly coming into general use. The St. Louis houses sell all over the country—in the East even more than in the West—from San Francisco to New York and Boston. Anything that can be washed by hand can be washed by these machines. They are easier on the goods, do the work with less fatigue in much less time, are easy of operation, and do not require the skill of the veteran washerwoman, and the St. Louis machines are known everywhere as being durable, compact and easy to keep clean.

Tertius—How was that little flyer you took in Wall Street the other day?

better satisfaction than any lamp they have ever  
used.  
MONAGHAN & MURPHY.

Salt Lake City, Utah, Feb. 25, 1901.  
The lamps which we have sent out have given  
universal satisfaction.  
THE SALT LAKE HARDWARE CO.

Osage, Ia., Feb. 13, 1901.  
During the last three months I have sold forty-  
three of your lamps. They really sell themselves.  
W. A. SWAIN.

Elgin, New Mexico, Jan. 10, 1901.  
I have never used a lamp that gives such per-  
fect satisfaction.  
J. F. MEERS.

Denver, Col., Feb. 8, 1901.  
The majority of our sales now are to parties  
who are throwing out the inferior lamps.  
FORD GAS REGULATOR CO.

Show Low, Arizona, Nov. 15, 1900.  
The lamp is giving good satisfaction, and I am  
exhibiting it to the public here.  
H. HUNING.

I have the best light in town. Every one who  
comes in my store praises them.  
FRANK DALBY.

Wetworth, Wis., July 23, 1900.  
I am using your lamps and want the agency.  
P. J. PERRING.

Flora, Ind., Dec. 12, 1900.  
We find them equal to the gasolene lamps that  
cost five times more.  
HANNA, BYERLY & CO.

Harrison, Minn., Jan. 14, 1901.  
Every one who sees the lamp thinks it is the  
proper thing, and don't want anything else.  
CHARLES MASTERS.

York, Pa., Feb. 28, 1901.  
All you claim for them. They certainly are a  
great saving institution and ready sellers.  
JOSEPH HOCHBERGER.

Sarasburg, O., Feb. 28, 1901.  
We consider your lamp the best on the market,  
and we have tried a good many of them.  
THE GARVER BROS. CO.

Three Rivers, Mich., Feb. 28, 1901.  
The more I use the lamps the better I like them.  
Wouldn't take double the price paid and go with-  
out.  
C. A. WOOD.

Rushford, N. Y., Dec. 18, 1900.  
They give the best light with the least trouble  
of any now on the market.  
G. H. DAMON.

Jericho Center, Vt., Jan. 18, 1901.  
We like the lamps first rate.  
JORDAN BROTHERS.

Rochester, N. H., March 26, 1901.  
It attracts the attention of everyone, and we  
can sell a large number of them.  
EMERSON & CO.

Skowhegan, Me., Feb. 18, 1901.  
Have the best lighted store in town.  
FRED. H. WING.

Chicopee, Mass., March 26, 1901.  
The lamp sent us has been well tested by us  
and has been found quite satisfactory.  
JOHN D. WHITE, City Treasurer.

Arctic Center, R. I., Nov. 21, 1900.  
We have just received some of your lamps,  
which we know we can sell a big number of.  
PUGH BROTHERS.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Allentown, Pa.—Ritter & Miller, lately clerks in the Coplay store of Person, Riegel & Co., will open a Hardware store at 327 Hamilton Street under the firm name of Ritter & Miller.

Bennettsville, S. C.—The Excelsior Hardware Co. is opening up a large stock of goods preparatory to supplying the Fall trade. This enterprise is under the management of R. J. Patterson, Jr.

Bismarck, N. D.—A. B. Marshall will establish an exclusive Hardware store at Washburn.

Columbus, O.—A Columbus incorporation recently authorized is that of the Dean Hardware Co. The corporation is capitalized at \$10,000 and the incorporators are E. S. Dean, W. O. Watson, H. R. Huggett, C. H. Kellstadt and J. J. Kinsell.

Fitzgerald, Ga.—D. M. Da Lee and others have incorporated Da Lee-Johnson Hardware Co., with capital stock of \$10,000.

Houston, Tex.—Ewing-Saigling Hardware Co. Capital stock, \$40,000.

Knoxville, Tenn.—The firm of Beaver Bros., merchants here, will open a large Hardware store at La Follette, Tenn.

Madison, Wis.—Stephenson & Studeman, 401 West Gilman Street.

Manhattan, Ill.—C. K. Small and H. H. Lichtenwalter have formed a partnership and opened up a Hardware store in the building formerly owned by G. H. Zinser. Mr. Smalley was the purchaser of the stock of Mr. Zinser.

Mobile, Ala.—Articles of incorporation have been filed in the probate court by N. R. Clarke, L. C. Dorgan, Jr., and T. O. Goodbrad, incorporators of the Dorgan-Goodbrad Hardware Co. The capital stock is \$10,000. The store will be located at 71 Dauphin Street, and the company expect to begin business about the middle of September, with a complete stock of new goods.

Mobile, Ala.—Mobile Hardware Co., 58 Dauphin Street. The officers of this company are: G. M. Luce, president; J. A. Lewis, vice-president; J. Holcombe Quill, secretary and treasurer; G. P. Martin, manager. Messrs. Quill and Martin will have the immediate management of the business.

Muskogee, I. T.—E. R. Durfey, who will soon open a Hardware store at this place, has returned from Kansas City where he bought a large and well selected stock.

Plevna, Kan.—Abbott & Hinshaw are erecting a large building for Hardware.

Portland, Ore.—The Pier Hardware Co. will engage in the Hardware business and deal in general merchandise, with a capital fixed at \$25,000, and with headquarters in Portland. S. C. Pier, S. C. Pier, Jr., and A. E. Pier are the incorporators.

Renton, Wash.—Robert Wood has purchased the old Custer property, one of the

first pioneer places in the State. He has erected a large building for a Hardware store.

Ripon, Wis.—The Ripon Hardware Co. has been organized as a State corporation. The principal stockholders are Ed. Koppin, C. H. Dodge and W. B. Nason, all Ripon young men.

Rockmart, Ga.—G. F. Morgan will begin the erection of a stone building on the lot where his old building was burned some time ago, and establish a Hardware business in connection with his son, Barkley, who has been connected with the Nixon & Terhune Hardware Co., of Rome.

Tomahawk, Wis.—The Northern Hardware Co., capital, \$30,000; William H. Bradley, Wallace G. Collins and William T. Bradley.

Youngstown, O.—It is reported that Auditor William R. Leonard and Charles Wilkins will organize a company with a capital of \$40,000 to engage in the Hardware business in this city. A large amount of the capital has already been subscribed and the matter has progressed so far that a site for the new store has already been secured. The promoters of the new company have secured a lease on the Powers property on East Federal Street. The lease is for fifteen years with a privilege of purchasing at the termination of the lease.

### Changes and Improvements.

Blaine, Me.—G. W. Young has sold his stock of Hardware to Frank Russell. Mr. Russell has rented the old Chandler store to which he will soon move his stock.

Bellaire, Mich.—F. D. Flye is having new foundation walls constructed for the erection of a new two-story brick block to take the place of his Hardware building recently burned.

Bessemer, Ala.—J. R. Day, who has conducted a Hardware establishment in the Jenkins block for a year past, has sold out to the J. A. Lewis Hardware Co.

Crowley, La.—The brick work on A. Jumonville's new building on the avenue has been completed. Jumonville will move his Hardware store from the present location into the new quarters in a short time.

Gainesville, Tex.—Cleaves & Son are moving their implement and Hardware store to the southeast corner of the square. They will front the square and South Dixon Street, occupying two large rooms on the ground floor and rooms upstairs.

Grafton, Ill.—John N. Eastman & Co. have fitted up an additional room to their store and stocked it with Hardware and tinware.

Guthrie, Okla.—Witter Bros. will occupy the east half of the new building which Scott Cooper is putting up on East Oklahoma Avenue with their Hardware and grocery departments as soon as the building can be fitted for them.

Houston, Tex.—H. H. Holtkamp has sold

his Hardware business at 313 Travis Street to the Houston Hardware Co.

Ishpeming, Mich.—The headquarters of the E. E. Swift Hardware Co., established here 20 years ago, will be moved Sept. 1 to Houghton, where a branch was established recently.

Johnstown, N. Y.—Frank Miller is about to make some extensive improvements in his Hardware store on West Main Street, and operations have already begun.

Mt. Pleasant, Pa.—James K. Husband is again back to the Hardware business at his old Main Street stand, having bought out his former partner, Samuel Schenck.

Omro, Wis.—Root Brothers have begun moving their Hardware stock into their commodious new building on Water Street. The building is a two-story brick structure. The first floor is used as a salesroom, the second story being used for a shop and for storerooms. A large freight elevator has been put in to facilitate using the second floor as a storeroom.

Pottstown, Pa.—A five-story Hardware store will be erected by the Fegely estate on the site of the Potts colonial mansion in Pottstown.

Poughkeepsie, N. Y.—The Hardware business which has been conducted by Charles E. Schou for a number of years, has been purchased by Elias Van Benschoten, and will in the future be known as the Van Benschoten Hardware Co.

St. Louis, Mo.—Reincorporation papers have been filed by the Simmons Hardware Co., of St. Louis, with capital of \$4,500,000.

Waitsfield, Vt.—F. J. Eaton, of the firm of Eaton & Savage, has sold out his interest in the business to O. M. Eaton. The business (stoves, tin, Hardware and general merchandise) will be continued at the old stand, under the same firm name, Eaton & Savage.

Westmoreland, Kan.—A. H. Reed has bought the interest of his partner, W. E. Sweet, in the Hardware business.

Whitman, Mass.—E. E. Bassett has added a line of Hardware to his paint business and is now engaged in both lines of business.

### Embarrassments.

Shippensburg, Pa.—William A. Cox, for many years the leading Hardware merchant of Shippensburg, has made an assignment for the benefit of creditors.

### Burglaries.

Bristol, Tenn.—Jas. W. Mort. Pistols, etc.

Gardiner, Me.—Cross & Robinson. Loss, \$400.

Paducah, Ky.—Geo. O. Hart & Sons. Loss, \$300.

Pottstown, Pa.—Van Buskirk Bros. Loss, \$100.

Punxatawney, Pa.—Punxatawney Hardware Co. Loss, \$200.

Schuylkill Haven, Pa.—Sausser Bros. Loss, \$50.

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Brooklyn, N. Y.—Vacuum Pulley Covering Co. To manufacture and sell cement for the covering of pulleys. Capital, \$25,000, and directors: Thomas W. Bollars, Jr., of Glen Cove; Adam Kessel, Jr., Charles D. Sternfels, of Manhattan.

Buffalo, N. Y.—Pressed Steel Rake Co. Capital, \$10,000, and directors: Charles H. Kellogg, George S. Kellogg and Edmund Patyka, of Buffalo.

Cleveland, O.—The Cleveland Pulley Co., of this city, has been incorporated at Columbus. The company will manufacture and sell pulleys of all kinds, and carry on a general business in Hardware and iron, steel and wooden implements. The incorporators are A. L. Moore, C. A. Babcock, Robert Deming, A. C. Yates and H. A. Ernsworth. The capital stock is \$50,000.

Cumberland, Md.—The Maryland Shovel and Tool Works Co., of Frederick County, has been incorporated. The incorporators are Francis Albert, Charles R. Yohn, William W. Albert and Francis Augustus Albert, of Baltimore; Jacob Smith, of Rohersville, Md.; Thomas H. Rose, of New York; George W. Biser, Henry M. Ruppenthall and Gregory Ruppenthall, of Berkeley Springs, W. Va.; William F. Steiner, Jacob Rohrbach and George T. Steiner, of Frederick County. The corporation is formed for the purpose of manufacturing shovels, forks and other agricultural implements. The plant will be located at Steiner's Mills, near Jefferson, Frederick County. The capital stock is \$50,000. The company organized and elected George W. Biser, president; William F. Steiner, vice-president; William W. Albert, secretary, and George T. Steiner, treasurer; Francis Augustus Albert as general manager. The company will erect a large plant, which will be operated by water power.

Hartford, Conn.—The Hartford Foundry Corporation has filed a certificate of incorporation with the State Secretary to do a general foundry business for producing, selling and dealing in castings of all kinds from iron, steel, copper, bronze, composition, brass and other metals, including the manufacturing of the castings into machinery, tools, Hardware, etc., and selling, erecting and installing the same, and to do all things appertaining to the conduct and management of the business. The capital stock will be \$100,000, divided into 1,000 shares. The corporation will commence business with a capital of \$73,000. The incorporators are Ernest Cady, John W. Conway and Ernest H. Cady, all of Hartford.

Hartford, Conn.—A certificate of incorporation of the Leader Mfg. Co. has been filed with the Secretary of State. The corporation is organized to manufacture and

deal in machinery, tools and general Hardware. The capital stock is \$25,000. The subscribers are Milton S. Tracy, J. Frank Robinson and David W. Williams, all of Glastonbury, and Edward J. Noble, of Hartford.

Jersey City, N. J.—The American Wire Washer Co. Principal office, Corporation Trust Co. Building, 15 Exchange Place. Objects, to manufacture washers from wire; capital, \$500,000. Incorporators: Herbert C. Hart, J. Hardy Krigler and Paul W. Ryder.

Pittsburgh, Pa.—The Manown 88-acre farm, opposite Monongahela, has been purchased in the interest of the Pittsburgh Wire and Steel Co., newly organized, for \$34,000. The company, which is composed of Alexander Dempster, Thomas Walker, Lieutenant Thomas W. Fitch, John W. Garland and Robert Garland, will apply for a charter, with a capital stock of \$2,000,000.

### Changes and Improvements.

Phelps, N. Y.—G. H. Parmalee has sold his plow works complete to Marshall King, of Orleans. Mr. Parmalee continues the business until January 12, 1902.

Philadelphia, Pa.—The trustee of the bondholders of the old Cumberland Nail and Iron Co. has sold all of the nail mill machinery, and it is being shipped from Bridgeton. Pipe will be the principal manufacture of the concern in the future.

### Recent Fires.

Charlestown, Mass.—There was a small fire recently in the refrigerator manufactory of A. D. Hall & Son, on Spice Street.

Chicago, Ill.—The plant of the Northwestern Ladder Works, at 2967 La Salle Street, has been destroyed by fire, which originated in the engine room of the ladder factory. The property loss is not entirely covered by insurance.

Clarksville, Tenn.—The stove factory of N. R. Horn at Seg. this county, has been destroyed by fire, the origin of which being unknown. The loss was \$2,000, with no insurance.

Dayton, O.—Fire has destroyed the machine room, foundry and storage room of the Gem City Stove Works. The loss is estimated at \$60,000.

Grand Rapids, Mich.—The plant of the Michigan Barrel Co., manufacturers of refrigerators, has been entirely consumed by fire.

Toledo, O.—The firemen were called recently to the Zeigler Filter Co.'s plant, at 2521 Broadway. The damage to the building is \$500 and to the contents \$1,500. The cause of the fire is not known.

### Embarrassments.

Cleveland, O.—Application has been made for a receiver for the Danielson Machine & Tool Co. It was incorporated in March, 1899, with a claimed paid in capital of \$20,000.

Fort Wayne, Ind.—Judge Aiken, on the application of W. E. Mossman et al, has

appointed the Fort Wayne Trust Co. receiver for the Volute Nut Lock Co.

New York, N. Y.—Philip A. Phillipson, doing business as the Neptune Mfg. & Supply Co., at 116 Pearl Street, sheet iron worker and dealer in cabin stoves and utensils has made an assignment to John H. Repper.

### Miscellaneous.

Beaver, Pa.—The annual meeting of the stockholders of the Olive Stove Works Co. was held at the office of the company at Rochester recently. The annual election of officers resulted in the re-election of the old officers and board of directors, as follows: President, William Moulds; Secretary and Treasurer, John R. Eakin; Directors, William Moulds, John R. Eakin, J. M. Eaken, J. J. Hoffman, Stanton Woods and John W. Dowell.

Meriden, Conn.—At the annual meeting of the Meriden Cutlery Co., the following directors were elected: A. L. Collins, Walter Hubbard, A. Chamberlain, John L. Billard, F. P. Wilcox, New York; J. M. Gildersleeve, New York; H. A. Curtiss and C. L. Rockwell. Mr. Rockwell succeeds the late John Allen, of Baybrook, who died about a month ago. The following officers were re-elected: President, A. L. Collins; treasurer, G. M. Howell; secretary, H. A. Curtiss.

Terryville, Conn.—At the annual meeting of the Eagle Lock Co., the following directors were elected: M. C. Ogden, New York; R. J. Plumb, Terryville; H. B. Plumb, Brooklyn, N. Y.; J. A. Carter, Geneva, O.; H. L. Bach and F. P. Wilcox, New York, and W. B. Woodruff, Thomaston, Conn. Subsequently the directors elected the following officers: President, M. C. Ogden; treasurer, R. J. Plumb; secretary, H. B. Plumb.

White Plains, N. Y.—At the annual meeting of the stockholders of the Russell, Burdsall & Ward Bolt and Nut Co., of Port Chester, the following were elected directors for the ensuing year: William L. Ward, Robert W. Parsons, Samuel Comly, Richard H. Burdsall, Elwood Burdsall, Walter S. Comly, William N. Cromwell, Howard E. Marshall and Charles Eldredge.

Every day adds to the value of news-  
paper advertising because every day  
shows more and more plainly the desire  
of newspaper publishers that adver-  
tisers shall have the best service in their  
power, and because the merchant more  
and more feels the necessity of getting  
out of the space used full value for  
what he paid for it.

## BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Elgin, Ill.—Fauber Mfg. Co. has been incorporated with \$350,000 capital. Incorporators: W. H. Fauber, Frank A. Burgess and Henry W. Norton.

Herkimer, N. Y.—At a meeting held here recently, organization was completed in the formation of the Atlas Gun Co., the preliminary steps towards which were taken at a previous meeting. The purpose of the corporation is the manufacture of the Atlas air gun, now being made by G. W. Warren at the gun factory in North Ilion, and the manufacture also of revolvers, rifles and novelties. The capital stock of the company is \$18,000 and the stockholders and directors are as follows: County Clerk D. M. Richardson, Dr. Cyrus Ray, County Judge L. R. Devendorf, W. I. Taber, H. G. Munger, C. S. Munger and A. T. Smith, of Herkimer, and G. W. Warren, of Ilion.

New York, N. Y.—Hydra Mfg. Agency has been incorporated with \$50,000 capital. Directors: Ernest J. Willis, John F. Hollingsworth and Charles D. Cole, all of New York.

Springfield, Mass.—The plans are now practically completed for the manufacture in this city of the new motor bicycles, the first of which was completed by Oscar Hedstrom for the Hendee Mfg. Co. last Spring. The plan is to increase the capitalization of the Hendee Mfg. Co. from \$5,000 to \$35,000. George M. Hendee will retain shares in the new company to the amount of \$20,000, the \$15,000 additional to the original stock being allowed Mr. Hendee as payment for his

equity rights in the patents, patterns and models of the new motor-cycle.

### Changes and Improvements.

Adams, Mass.—The firm of Curran & Powers, bicycle dealers, has dissolved partnership, Mr. Curran having purchased Mr. Powers' interest.

Ashland, Pa.—The Shenandoah Powder Co. is enlarging their plant in the Catawissa Valley. A new engine will be installed and the capacity of the plant will be 3,000 kegs of manufactured powder per week.

Binghamton, N. Y.—A meeting of the directors of the Sectional Pneumatic Tire Co. was held recently in the office of H. J. Gaylord. When the company was organized it was intended to have its tires made by contract and put on the market by the company. Last evening it was decided to get into larger and better quarters and install machinery for the manufacture of the tires here. This means an outlay of considerable money, but when the plans are completed the plant will furnish employment for at least a hundred skilled hands.

Cleveland, O.—At the headquarters of the Shelby Tube Co., in this city, President Boynton confirmed the statement that the concern had passed into the control of the United States Steel Corporation. The tube company is capitalized at \$13,000,000, of which \$5,000,000 is in preferred and \$8,000,000 in common stock.

Greenwich, Conn.—C. J. Ferris has moved his bicycle business into the store recently occupied by Adam Zink, who has moved to Stamford.

Hartford, Conn.—The Hartford Rubber Works has taken over the business of the manufacture of the Dunlop tires, which

have heretofore been made at Belleville, N. J. The result of the transfer will be to largely increase the work and the force of employees of the local concern, as the Dunlop works employed a large force of men.

Lancaster, N. H.—Beach & Parks succeeds Beach & Sons.

New Haven, Conn.—The Winchester Repeating Arms Co. are erecting several powder houses, a storehouse and other buildings at their powder farm in Hamden.

Pittsfield, Mass.—W. J. Devall has removed to Burns's Block.

Port Jervis, N. Y.—Louis De Berhle succeeds Peter Rutan.

Reading, Pa.—The Acme plant of the American Bicycle Co., in this city, has been abandoned by the trust, and the machinery is being shipped to the Crawford Works, at Hagerstown, Md.

Wellsboro, Pa.—W. E. Champaign succeeds J. W. Butts.

Wilmington, Del.—Albert E. McDaniel and Leonard D. Kemp, bicycle dealers, Market Street, above Tenth, have dissolved partnership. The business will be continued by Mr. McDaniel.

### Recent Burglaries.

Gardiner, Me.—Cross & Robinson. Loss, \$400.

### Recent Fires.

Alton, N. Y.—Fire has destroyed the bicycle shop of I. D. Legg, the cause of the fire being a mystery.

### Miscellaneous.

Wheeling, W. Va.—The Hollenbeck Gun Co., which is getting its factory into working shape as fast as possible, will hardly be in a position to turn out any guns before October. The company has been installing new machinery as fast as received.

## HARDWARE MANUFACTURERS RECORD. Continued.

### Changes and Improvements.

Fair Haven, Mass.—The Atlas Tack Co. has decided to build an addition, 40 feet long and three stories high upon the east end of the new tack mill now under construction. The new structure will then be 663 by 227 feet. This portion of the building will be reserved for the manufacture of eyelets.

Lansing, Mich.—E. Bement's Sons, of this city, manufacturers of stoves and agricultural implements, filed amended articles of incorporation yesterday, increasing the capital stock from \$500,000 to \$1,250,000.

Leetonia, O.—Work has been commenced on the rebuilding of the Leetonia Boiler and Tool Co.'s plant. The shops are being rebuilt on the site of those recently destroyed by fire.

Peekskill, N. Y.—The Union Stove Works have removed their sheet iron mounting department to their Peekskill

plant. For many years this has been done in their Beekman Street building, New York City.

Portland, Me.—National Tool and Novelty Co., for the purpose of manufacturing, purchasing and dealing in ice tools and other tools and instruments, with \$10,000 capital stock. The officers are: President, G. Sanford Kidder, Boston, Mass.; treasurer, Carleton H. Hutchinson, Boston, Mass.

Reading, Pa.—The Prizer-Painter Stove and Heater Co., of this city, have increased their capital stock from \$200,000 to \$350,000.

Sharon, Pa.—The buildings of the Ellwood City, Pa., Bath Tub Works have been sold to the Pennsylvania Stove Co. The plant will be fitted for the manufacture of cast and wrought iron stoves and ranges. About 200 men will be employed.

Springfield, Mass.—The Globe Wire Works, in which the principal stock is held

by Springfield people, announce plans to erect a two-story building in State Street at a cost of \$14,000. The company will manufacture wire goods and will run its shop on union principles. A competent superintendent has been engaged. William Wallace is the principal stockholder.

St. Louis, Mo.—The St. Louis Steam Forge Works will erect a new building at the foot of Barry Street. A permit calling for a \$10,000 structure has been issued, and it will be mainly of steel. The fire at the plant some time ago turned the owners' thoughts to the advisability of having a fire-proof structure.

Wilmington, Del.—In the building at Nineteenth and Tatnall Streets, until recently occupied by the American Die and Tool Co., the manufacture of shears shortly will be commenced. Howard T. Wallace and De Haven Morris are chiefly interested in the new concern.

## FISHER TUBE SKATE

*The Latest and Best for  
Racing and Hockey. . .*

As great an improvement in skates as the  
pneumatic tire in bicycles.

HOCKEY MODEL.

Scaffolding and Clothes Poles, Flags and  
Flag Poles Erected, Gilding in all  
its Branches, Lightning Rods,  
General Rigger.

44 CENTRE STREET, - NEW YORK

## "Bright & Newsy."

Biddle Hardware Co., Philadelphia,  
Pa. [*General Hardware and Bicy-  
cles*]: In season and out, we have  
claimed that the Hardware trade was  
the proper medium for the disposal  
of bicycles and bicycle sundries  
throughout the country, and our opin-  
ion on this point is so well known,  
that it does not seem as if we could  
strengthen it materially by saying it  
again. Of course large cities may be  
able to support a few exclusive bicy-  
cle men, but in the majority of towns  
and cities throughout the country  
the man must have other business  
in order to make it pay. We ap-  
preciate the fact that from the first  
HARDWARE has held the same views,  
and we think they have been fully  
justified by the trend of events.  
HARDWARE is always welcome in our  
office, and its bright and newsy col-  
umns are often a relief amid the cares  
of business.

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now  
on the market. The materials used in its construction are  
the best. The appearance and workmanship is far ahead of  
any other Air Rifle made. It has an adjustable sight it shoots stronger  
and more accurate, less liable than any other to get out of order, all  
parts are interchangeable. We think we have the right to claim this as  
the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00.

## PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

## The Lee Bread Crumber No. 10.

### FOR THE HARDWARE TRADE.

SIZES heretofore made are not suitable for the Hardware trade being sold through the hotel supply houses exclusively. The No. 10 is for family use and there will be a large demand as it will be liberally advertised. This size

**Will be Handled by the Hardware Stores.**

See that you have a sample at once, of your Jobber, or address \_\_\_\_\_

N. Y. Office, 10 Warren St. **GOODELL COMPANY, Antrim, N.H., U.S.A.**

## If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

**CHAS. D. BROWN, Agent,**

**160-162 Duane Street,**

**New York City.**

## "NONE BETTER" STEEL DOOR HANGERS

Track & Stay Rollers.

. . . Hinges & Butts.

Our Goods are all right.

Our Prices are all right.

**McKINNEY MFG. CO., Allegheny, Pa.**

It is consecutive, continuous, persistent efforts that win in advertising as in all other affairs of business. The twelfth advertisement carries part of the weight of each of the preceding eleven, and the twentieth is worth ten times the first. The first is simply an introduction, and few people remember an introduction unless subsequent meetings serve to impress it upon them. Friendship ripens slowly. This is true in social life, in business and in advertising.—*American Poultry Journal*.

**BURDITT & WILLIAMS CO.,**  
Sole Importers.  
BOSTON, MASS.

**I**T is consecutive, continuous, persistent efforts that win in advertising as in all other affairs of business. The twelfth advertisement carries part of the weight of each of the preceding eleven, and the twentieth is worth ten times the first. The first is simply an introduction, and few people remember an introduction unless subsequent meetings serve to impress it upon them. Friendship ripens slowly. This is true in social life, in business and in advertising.—

**REMINGTON ARMS COMPANY, ILION, N. Y.**

818-817 Broadway, New York. 425 Market St., San Francisco, Cal.

## STANDING SEAM SNOW SHOE IRONS

PATENTED

These irons are for standing seam metal roofs, the lugs shown clinching through the seam. No rails are needed if they are spaced properly, but the rail can be added if desired. We also make one for slate roofs, and besides acting as a snow breaker these irons improve the appearance of a building.

For Standing  
Seam.

**BERGER BROS. CO.**

231 and 237 Arch St., Philadelphia.

Factory at Germantown Junction.

For Slate Roofs.

# HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00    A 2, 400 pages, - - \$1.50  
A F, 200 pages with flap, 1.25    A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00    B 2, 400 pages, - - \$1.50  
B F, 200 pages with flap, 1.25    B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/2 x 8 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00  
C F, 200 pages with flap, - 1.25  
C 2, 400 pages, - - 1.50  
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 x 8 inches*

FOUR EDITIONS:

D, 240 pages, - - \$1.50  
D F, 240 pages with flap, - 2.00  
D 2, 480 pages, - - 2.50  
D F 2, 480 pages with flap, 3.00

Price Book D.

## MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the name of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU**  
" Parers, Apple " **PA**

For Chisels, turn to **CH**  
" Cutlery, " **CUT**

For Iron, turn to **IRO**  
" Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

Price Book E.

# HARDWARE

Coates Clipper Mfg. Co., Worcester, Mass., have appointed John H. Graham & Co., 113 Chambers Street, New York, their general selling agents for their Horse and Barber Clippers, with the manufacture of which they have long been identified. It is intended that the agents shall receive all orders and name quotations. The goods, however, will be billed by the Coates Clipper Mfg. Co., and all remittances should be made to them. The reputation of these standard Clippers is so well known in every market, it is only necessary to announce as the company does, that every effort will be made to maintain the high standard of excellence in the manufacture of these goods, which have been known to the Hardware trade for twenty-five years.

Miller, Sears & Walling, who were formerly located at 20 Reade Street, New York, have moved their business to 100-102 Reade Street, taking the premises formerly occupied by the Kearney & Foot Co. As they are now the New York headquarters for the Kearney & Foot files manufactured by the Nicholson File Co., the move on their part is a wise one, and justifies the belief that it will prove a very successful location for them in which to do business. They carry a stock of the above named files in order that special deliveries may be made at any time, and among the other goods handled by them, they are agents for the States of New York, Connecticut and New Jersey for the Dille & McGuire Mfg. Co., of Richmond, Ind., for the sale of the Lawn Mowers that have long been made by them, and well known to the dealers in the States mentioned. They intend carrying a stock of these, as their legitimate business is that of wholesale dealers of a general line of Hardware.

The catalogue of "America's Greatest Manufacturers of the Engineering and Metal Trades," shortly to be published by George Wright, 120 Fulton Street, New York, is rapidly approaching a finish, and manufacturers wishing to be represented in it should apply without further delay. The work when printed is designed to give the names and details of their business of the larger manufacturing concerns of the United States. Only one issue of the work is contemplated, and this will be distributed abroad gratuitously in the interest of its advertisers. To give them some sort of an idea what this American edition will look like, a copy of a similar work called "Great Britain's Greatest Manufacturers" will be sent for inspection to possible advertisers on request.

James H. Mann, who is an axe maker well known to the Hardware trade, having nearly a half century of experience to draw upon, is the owner of a new axe factory now in course of erection near Lewistown, Pa., which it is expected will be in operation some time next month. It will be thoroughly equipped with the latest labor-saving machinery, and a large number of skilled mechanics will be employed. Mr. Mann will be associated in the management with his sons, Frank E. and William H. Mann, formerly identified with the American Axe and Tool Co.

In our issue of September 10th we published an interesting article bearing on the history of the U. S. Patent Office, which was prepared for us by Davis & Davis, the well-known solicitors of American and foreign patents, Washington, D. C., and the St. Paul Building, New York City. Through some inadvertence the proper credit was not given the above concern for their interesting matter, and we take this method of making amends for the omission.

## Invitation to the Manufacturers.

On behalf of the National Hardware Association, T. James Fernley, secretary-treasurer, has extended a cordial invitation to the Hardware manufacturers to be present at the forthcoming convention of this Association of Hardware jobbers. This will be largely accepted by the manufacturers of the country, their attendance either personally or by deputy, having invariably proven to be one of the happiest of the inspirations that give such interest to the proceedings. The text of the invitation is as follows:

"The time for the seventh annual convention of the National Hardware Association is rapidly approaching, as perhaps you are aware; same is to be held in the city of Cleveland, Ohio, October 9, 10 and 11, the official headquarters being at the Hotel Hollenden.

"It is not the policy of our association to send out engraved invitations, and yet, as you know, manufacturers and their representatives have always been made welcome, and there will be no exception to the rule at the time of our next convention.

"After the adjournment a large number of the delegates and their friends will visit the Pan American Exposition. We have made arrangements with the Hotel Gibbs, situated on Elmwood Avenue, and the Brandtford Apartments, situated at corner of Potomac Avenue and Brandtford Place, Buffalo, to accommodate those who may visit the exposition, after the adjournment of our convention.

"Arrangements have been made with the railroad companies to allow regular convention rates to all who attend. When purchasing tickets it will be necessary to ask for a certificate, stating that the purchaser is about to attend the convention of the National Hardware Association. These certificates will permit the purchaser to return to point at which ticket is purchased for one-third the fare paid in going from that point to Cleveland, and will be good until October 19.

"At least two sessions of the convention will be open to you, and the social features will be arranged in such a manner that you may also participate on the same basis as the convention delegates.

"As soon as the official programme is issued, the writer will take a great deal of pleasure in sending you a copy."

At the third annual convention of the Canadian Wholesale Hardware Association, held in Toronto on the 13th inst., the following officers were elected for the ensuing year:

President—W. Starke, Howden, Starke & Co., Montreal.

Vice-President—Thomas B. Lee, Rice Lewis & Co., Limited, Toronto.

Secretary-Treasurer—James Hardy, Jenkins & Hardy, Toronto.

Executive Committee—John Bowman, John Bowman Hardware and Coal Co., London; Thomas Birkett, M. P., T. Birkett & Sons Co., Limited, Ottawa; Joseph Lemieux, N. Lemieux & Fils, Quebec; Frank O. Lewis, Lewis Bros. & Co., Montreal; Alfred Jeannotte, L. H. Hebert, Montreal, and Secretary-Treasurer Hardy.

In response to an invitation to their convention from the National Hardware Association of the United States, President W. Starke, Vice-President Thomas B. Lee and Secretary Hardy were appointed delegates to represent the Canadian organization at the said convention.

# HARDWARE

VOL. XXIII. SEPTEMBER 25, 1901. NO. 12

**HARDWARE** is a Review of the American Hardware Market, specially devoted to the Retail Trade.

**HARDWARE** is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

**Foreign Subscriptions.**—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.00 a year, postage prepaid.

**Change of Date.**—It takes two weeks to change the date, after your subscription is renewed.

**Expiration of subscriptions.** The date on the wrapper indicates when your subscription expires.

**Change of Address.**—Always give both your old and your new address when you ask us to change your address.

**The Name of your Post-office and of the State you live in** should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

Letters should be addressed

**HARDWARE PUBLISHING CO.,**

375 Broadway, New York.

L. E. MITCHELL,	- . .	President.
A. P. MITCHELL,	- . .	Secretary and Treasurer.
HENRY HOPKINS,	- . .	Editor.
A. E. BOLLES,	- . .	Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

## Editorial Trade Review.

The unparalleled horror of the President's assassination seems to have dwarfed the industrial movements of the whole world during the past fortnight, and created a feeling of gloom and uncertainty over mortal achievements that culminated with the interment, when it seemed as though the pulse of the entire world stood still for five minutes.

The ending of the strike among the iron and steel workers was terminated by adjusting their differences at an opportune time to offset any revulsion in prices, usually a condition of the general markets when the death of the head of the Government creates a fear of harmonious industrial action in the immediate future.

The general trend of business in every direction is still of the most promising character, the only fear now agitating the buying community being the probability of the mills doing their best to get abreast of the rapidly multiplying orders, which are showered upon them from every conceivable quarter. The requirements of the expanding trade, arising from light stocks and a steady, stable demand for seasonable goods, are being carefully ordered and considerably followed up, the knowledge of the Fall and Winter season being a long one inspiring the dealers with a belief in receiving supplies gradually and by degrees, until the season's close.

Naturally many goods, the raw material for which is found among the products of the mills whose full power for productiveness has been held in abeyance during the strike period, are still in scant supply, and a full range of sizes on many lines is exceedingly difficult to obtain.

This retards full deliveries by the jobbers, and makes the back order book assume a greater importance than usual, but it will hardly be a great while before the running of day and night shifts will bring the factories on a level with their ability to fill promptly, and the regular channels of traffic be free from obstruction, lessening a natural apprehension and possible distrust.

Notwithstanding the scarcity of leading goods in many lines, it is a matter of surprise that business keeps up to the high-water mark of the present time. For while unable to make complete deliveries, the business as a whole is far in advance of sanguine expectations in many parts of the country, notably West and Southwest, August showing a surprising footing on sales, with September following close after, away in advance of previous records.

With the short stocks and lack of sizes everywhere prevailing, complaints from customers who fancy precedence is being to orders from others to their own detriment, form the feature of the morning mail. They must not get unnecessarily restive, as a year of surprises such as this has proved, has disconcerted the calculations for stock requirements of the most optimistic of buyers, arising from the lack of supplies long ordered, and the inability under piecemeal deliveries to give every customer a satisfying quota on his individual order.

## The Anarchist Must Go.

The cruel death of our noble President, sacrificed as he was while a clasp of the hand gave token of sincerity and fidelity, may yet be productive of the world's good. The dastardly act that terminated his life, "the deep damnation of his taking off," will undoubtedly intensify the vindictive feeling of hatred which all the world experiences when rank treachery is the opposing force. Let us hope a combined effort will be made to extirpate from the face of this beneficent earth, from the field of useful effort for race advancement, for which they care so little, those pariahs of civilization, those creatures without a country, hopeless, defiant and degenerate, who are unfit to live beneath the creative sun, and who glory in the name of Anarchist—the autonym of virtue, patriotism, civic health and altruistic faith. It has been fitly expressed that they are converts to a gospel of discontent, and they should no longer be permitted to build an altar anywhere on which to offer as human sacrifices to distorted reason the rulers of the world, to which they deny all manner of allegiance.

## The Steel Strike Ends.

There never seemed a time during the continuance of the strike among the steel and iron workers when it seemed probable they could carry the issue to completion on which the contention was founded. It was so inconceivably weak, even the adherents of the dominant Association responsible for its continuance failed to impress many of its own members with the justice of its demands, especially when exhibiting the readiness with which the act of striking cast to the winds the binding power of contracts already agreed to and in force, which were in this manner arbitrarily abrogated without notice, and proven adverse to every principle of right and wrong underlying the relation of the employer and employee.

It was evident that when the strike was resisted under these circumstances by the full power of the corporation with an unyielding strength that did much to localize the

disturbance, it was within their corporate power to transfer to such of their separate plants as they desired a concentration of constructive energy which boded ill for the success of the strikers, while inspiring confidence in the corporation's ability to still supply their products in some stage of completeness. The reluctant compliance with the strike order by the men gave opportunity to the corporation to carry on a great deal of its business without serious interruption, so that they were more inclined to let the strike fail by its integral weakness rather than force the fight to the detriment of their industrial productiveness.

It was not deemed politic to seek the downfall of all labor organizations as was originally outlined, or they would have shown a much more strenuous policy than they did when they had the organization subjected to disciplinary measures. They had no desire to so completely antagonize the workers as to give them an additional grievance, and one made possible by inconsiderate treatment from the employing standpoint. It will be found that a greater degree of respect prevails for the methods employed by the contending corporation in bringing the strike to a close than there is of admiration for the inauguration of a movement which from an insufficient cause and insincerity in the leadership, was destined to failure from its very start.

### Record Exports From the United States.

Exports from the United States in the year ending August 31, 1901, were \$1,500,613,236. This is the first time in the history of our export trade that the figures for a twelve months' period have crossed the billion-and-a-half line. The Bureau of Statistics, in its statement of imports and exports, issued each month, gives a total for the latest twelve months and compares it with the corresponding twelve months in preceding years, thus giving a convenient method of not only measuring the foreign commerce, but also measuring its growth. This table shows the imports and exports in each twelve months ending with August 31, from 1896 to 1901, as follows:

#### IMPORTS AND EXPORTS FROM THE UNITED STATES DURING TWELVE MONTHS ENDING AUGUST 31ST, OF THE YEAR NAMED:

Year ending Aug. 31, 1896.	Imports. Dollars.	Exports. Dollars.
1896 .....	737,163,827	906,403,525
1897 .....	756,673,034	1,066,603,779
1898 .....	623,192,020	1,236,643,922
1899 .....	723,232,313	1,269,504,882
1900 .....	848,675,810	1,399,000,520
1901 .....	843,681,360	1,500,613,236

An examination of the above table shows that the exports have, during the five-year period from August 31, 1896, to August 31, 1901, increased more than 50 per cent., while the imports have increased less than 15 per cent. While it is not customary to calculate the annual statistics of our commerce by other than fiscal or calendar years, the fact that the export record has, for the first time, exceeded a billion-and-a-half dollars in a twelve months' period, seems to justify these comparative figures for the period under consideration.

The growth in exports during the period since 1896, in which the increase in exports has been more than 50 per cent., compared with an increase of less than 15 per cent. in imports, as is well known, included all great classes of products and manufactures. Agricultural products now form 63.7 per cent. of the total exports, and in 1896, they formed 63.9 per cent. Manufactures now form 29 per cent. of the total exports, and in 1896 they formed 28.3 per cent.

During the last year, however, the exports of manufactures have not kept pace with those of other industries. In the 8 months ending with July, 1901, the latest month in which the details are accessible, exports of manufactures fell \$32,000,000 below those of the corresponding months of last year, while exports of agricultural products were \$57,000,000 greater than those of the corresponding months of last year. This reduction in exports of manufactures is about equally divided between copper, and iron and steel, the reduction in copper exports being about \$16,000,000, and in iron and steel about \$16,000,000. The reduction in copper exports is chiefly due to the decreased demand for copper in other parts of the world for use in electrical and other industries. In exports of iron and steel the reduction is apparently due somewhat to the partial suspension of manufacturing activities in certain lines in the past few weeks, partially to the reduced demand abroad, partially to the reduction in prices of the articles exported, and in large part to the fact that the exports of Hawaii and Porto Rico, which were included in last year's statistics, are not included in the figures for the present year—the total exports of iron and steel of those two islands in the fiscal year 1900 having been about \$7,000,000.

The phenomenal growth in exports is illustrated in another form by the fact that the monthly statements have not, for more than two years, fallen below the million-dollar line, while, as already indicated, they have for the first time passed the billion-and-a-half mark for a twelve months' period. The table which follows compares the monthly exports in each of the twelve months ending with August, 1896, and August, 1901, and illustrates the growth which has occurred during the intervening period:

#### EXPORTS FROM THE UNITED STATES DURING THE 12 MONTHS ENDING WITH AUGUST, 1896, AND AUGUST, 1901:

	1896.	1900.
September .....	58,540,063	115,901,722
October .....	87,090,972	163,388,511
November .....	87,312,581	136,702,324
December .....	92,529,117	145,889,865
	1896.	1901.
January .....	86,970,028	136,325,601
February .....	77,701,904	112,967,014
March .....	75,574,184	124,473,643
April .....	71,091,747	120,754,190
May .....	66,568,263	124,587,911
June .....	66,705,871	102,774,263
July .....	67,717,789	109,451,775
August .....	68,601,006	107,426,417

Total 12 months ending August. 906,403,525 1,500,613,236

### What is a Cash Register?

A Cash Register is what the name implies—a register of cash received and disbursed. In no way can a detailed and accurate account be obtained of a business transaction unless the dealer writes it. This is done in most business houses through the use of a day book and journal, but the entry is often forgotten and there is nothing to remind one of any omission, until an enraged customer, at time of settlement, shows how carelessly the business has been conducted. In other words, the dealer or his clerk has forgotten to credit a payment on account.

The Standard Cash Register, manufactured at Wabash, Ind., is designed for the purpose of, and does prevent errors of this kind, because the cash drawer cannot be opened for any purpose, without showing the omission, if it occurs. It also informs the dealer which clerk sells the most goods, and whether sold for cash or credit. It even tells him who bought them. Tells him when money is received, or paid out, and for what. In fact, while it makes clerks especially careful, it gives a complete statement of the day's business, and compels systematic methods of storekeeping.

## LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,  
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

## Attachment—Third Party Claim.

**QUESTION:** Some time ago I had an attachment levied on some property of mine in my store in New York City. A friend of mine had two or three desks and considerable other furniture in my store at the time, and although I told the sheriff that this property did not belong to me he insisted upon levying his attachment on it. I had no desire to see my friend placed in an awkward position, as he loaned me these in order that I might have the use of them, although I did not own them. Kindly inform me what he should do, as it does not seem right that the sheriff representing my creditors should take his property.

**REPLY:** Your friend's first step should be to consult a lawyer, who, after hearing the facts, will undoubtedly put in what is called a third-party claim for your friend—that is to say, he will file with the sheriff a statement setting forth the fact that your friend owns certain property attached by the sheriff in the attachment suit against you. The sheriff will then summon a jury to determine whether you or your friend owns this property. In such a case as this the jury almost invariably finds for the claimant, and the sheriff will then deliver the property to the claimant, unless the plaintiff in the action gives the sheriff a bond in double the amount of the value of the goods held and \$250 additional to indemnify the sheriff against being sued by your friend in the event of the final determination deciding that your friend owns the goods and that you do not. This is the most simple and most effectual way out of your friend's difficulty.

## Execution of Partnership Certificate Required by the Laws of 1900.

**QUESTION:** I have been informed by a recent law passed by the State of New York that it is necessary for all persons conducting business under the name of — & Co., or under any assumed name, to file a certificate with the Clerk of the county where they transact business, stating the name of each partner engaged in the business. I should like to be informed whether it is necessary for each partner to sign this certificate, or whether it is sufficient for one partner only to sign the certificate mentioned.

**REPLY:** The act to which you refer is known as Chapter 216 of the Laws of 1900, and constitutes part of Section 363 of the Penal Code of New York State. As this law only took effect on September 1st last, there have been no decisions construing its exact meaning. The law, however, provides that the "persons" engaged in business shall sign and acknowledge before a notary public the certificate referred to. The act also provides that a properly certified copy of the certificate referred to shall be presumptive evidence of the facts contained in such certificate. As a general proposition, the act of one partner within the scope of the partnership business binds each and every member of the firm. We are of the opinion, however, that in a case such as this, where the statute provides that the certificate required to be filed shall be presumptive evidence of the truth of the facts contained therein, that in order to bind each member of the firm to the statements contained therein, each member of the firm must sign and execute the certificate as required by statute. If this view of the statute were not taken, one partner by executing the certificate and writing in the name of several other persons, would bind these several other persons by his act, and without any act on their part, they would be estopped from denying their membership in the firm.

## Wife's Right As Devisee.

**QUESTION:** A man died having made a will devising one-half of the real estate and one-quarter of the personal property to his wife, and the balance of his estate to his children. Could the wife refuse to accept the terms of the will and demand her one-third life estate in the real property and one-

third of the personal property which she would have been entitled to had her husband made no will, leaving the other two-thirds of the estate to be divided between the children, thus practically setting aside the will?

**REPLY:** In a case such as you describe, the widow would be at liberty to refuse to accept the terms of the will, so far as they sought to defeat her right of dower in her husband's property. A man cannot by his own act defeat his wife's right of dower in all the real property in which he has an estate of inheritance during marriage. The most he can do is to make a devise to his wife in his will in which he can provide, that if she accept, it must be taken in lieu of dower. The wife, therefore, has the privilege either to accept or to refuse to accept the devise and may take her dower in the property. The wife has one year in which to make her election. As to the personal property, however, the same rule does not apply. A widow under the circumstances referred to, where her husband dies intestate, has the right to one-third of the personal estate; but if her husband dies leaving a will, the statute has no application whatever, and she will receive only so much of the personal property as is bequeathed to her in the will.

## Advisability of Loaning Money Secured by Second Mortgage.

**QUESTION:** I am desirous of investing about \$5,000 in bond and mortgage in the city of New York. I understand that if I loan this \$5,000 on a first mortgage I will only receive four or five per cent. for my money; but that if I loan on the second mortgage, I could easily obtain six per cent. for my money and a considerable sum of money as a bonus for making the loan. I should like to have you inform me through the columns of your paper as to whether a loan secured by a second mortgage is advisable, and whether it is usually considered as a safe investment.

**REPLY:** We would not advise a person to loan his money to be secured by second mortgage, except under somewhat unusual circumstances. It must be remembered that a person who holds a bond and mortgage on property in New York City, as a second mortgage, has only a lien on the property subsequent to the amount of the first mortgage. The result of this is that if at any time the property should be foreclosed by the first mortgagee and should not sell for a sum sufficient to pay the first mortgage, as well as the second, the first mortgagee would take all the money necessary to satisfy his first mortgage, and the second mortgagee would obtain only the balance. A second mortgagee is obliged to watch property on which he holds a second mortgage with the utmost closeness. It is his business to see that the taxes on the property are paid promptly and that the property is insured to its full value; that the insurance policies contain the proper mortgage clauses, and that the interest on the first mortgage is paid by the mortgagor promptly. If these matters are not looked after closely, the taxes and the interest on the first mortgage become prior liens to the second mortgage, and the security of the second mortgagee is reduced to that amount. A second mortgage is sometimes justified where the property is unquestionably worth much more than the amount of the mortgages upon it; but in all instances, we would advise the utmost caution.

## Another New Shovel Plant.

Waynesburg Pressed Steel Co., Waynesburg, Pa., are manufacturing a full line of plain and hollow back shovels. The capacity of their factory is stated to be about 200 dozen per day, including also in their general output large quantities of drop and railway forgings, elevator buckets and pressed steel specialties of many kinds. The main building occupied by them is 100x150 feet, and is completely equipped with the most modern shovel machinery. The company's officers are as follows: R. W. Munnell, president; S. P. Hooper, treasurer; J. W. Munnell, secretary; T. B. F. Rinehart, John T. Rogers and W. D. Forsyth, the last of whom is general manager and well-known in the pressed steel and shovel business, and in the establishing of plants of this character.

# Southern Hardware Jobbers' Association.

The Southern Hardware Jobbers' Association have just distributed a little pamphlet to their members which gives the officers and members of the Executive and Standing Committees for the ensuing year, and also the membership of the organization arranged according to the several States in which they are located. We give herewith the names of the Standing Committees:

Transportation Committee—W. E. Newill, King Hardware Co., Atlanta, Ga.; John Donnan, W. S. Donnan & Co., Richmond, Va.; W. L. Sanford, Roberts, Sanford & Taylor Co., Sherman, Tex.

Manufacturers' Committee—C. E. Speer, Speer Hardware Co., Ft. Smith, Ark.; A. Baldwin, Jr., A. Baldwin & Co., New Orleans, La.; Frank S. Gray, The S. B. Hubbard Co., Jacksonville, Fla.

Grievance Committee—James Moroney, Moroney Hardware Co., Dallas, Tex.; S. McDowell, Baker & McDowell Hardware Co., Natchez, Miss.; P. G. Wall, Knight & Wall Co., Tampa, Fla.

Press Committee—F. P. May, F. P. May & Co., Washington, D. C.; Thos. W. Fritts, Tom Fritts Hardware Co., Chattanooga, Tenn.; A. B. Palmer, Palmer Hardware Co., Savannah, Ga.

Membership Committee—Joseph Orgill, Orgill Bros. & Co., Memphis, Tenn.; R. F. Bell, R. E. Bell Hardware Co., Weatherford, Tex.; C. A. Cunningham, Cunningham Hardware Co., Mobile, Ala.; W. A. Pleasants, W. A. Pleasants Hardware Co., Shreveport, La.; Chas. H. Watkins, Watkins-Cottrell Co., Richmond, Va.

# National Hardware Association.

## THE OFFICIAL PROGRAMME OF THE CONVENTION.

The following is the official programme of the Convention of the National Hardware Association of the United States, whose deliberations will commence at Cleveland on Wednesday, October 9th, and continue until Friday, October 11th. The number of important features that make the proceedings possess more than the usual amount of interest, and the visit at its adjournment to the Pan American Exposition, preparations for the furtherance of which have been attended to, promise to make this the largest and most interesting convention the Association has ever held. The convention headquarters will be at the Hollenden Hotel, and no more admirable location could be selected for the purpose.

## PROGRAMME.

### WEDNESDAY, OCTOBER 9TH.

#### 9:30 A. M.

(This session is open to manufacturers, their representatives, the ladies and members of the press, and it is requested that all assemble promptly at the hour named.)

Opening Remarks.....President Richard W. Shapleigh  
Prayer.....Rev. Dr. S. P. Sprecher  
Chorus....."America"  
Address—Tendering Freedom of the City,

Mayor Hon. Tom L. Johnson

Address—On Behalf of the Cleveland Chamber of Commerce,  
Chas. W. Pack, President

Address of Welcome on Behalf of the Manufacturers of  
Cleveland.....S. D. Latty

Just before the Roll Call, the ladies will be given an opportunity to withdraw to meet the Cleveland Ladies' Reception Committee in the hotel parlors.

Roll Call.

Reading of minutes of the 1900 convention.

President's annual address.

Report of the Secretary-Treasurer.

Introduction of fraternal delegates, from the Canadian Wholesale Hardware Association.

Collocation: "How can manufacturers of Hardware and kindred lines most economically distribute their product?"

### WEDNESDAY NOON.

#### SESSION OF THE METAL DEALERS.

Immediately after the morning session, all the members of the Association who deal in Tin Plate and Metals, will please meet for a conference.

### WEDNESDAY AFTERNOON,

Delegates will assemble at 2:30 sharp.

Report of Executive Committee.  
Report of Membership Committee.  
Report of Grievance Committee.  
Report of Fraternal Relations Committee.  
Report of Press Committee.  
Report of Transportation Committee.  
Report of Entertainment Committee.  
Report of Metal Committee.  
Report of Heavy Hardware Committee.  
Communications.  
Discussion: "True method of computing cost."  
Question Box.  
Miscellaneous business.

### WEDNESDAY, 8 P. M.

Annual smoker will be given, to which the ladies will be invited.

### THURSDAY MORNING.

#### 9:30 sharp.

Delegates will kindly assemble promptly. Executive session.

Miscellaneous business.

Discussion of questions to be drawn from the Question Box.

Miscellaneous business.

Consideration of Committee Reports.

### THURSDAY, 2 P. M.

The manufacturers of Cleveland will tender a drive to the delegates, and the visiting ladies.

### THURSDAY, 8 P. M.

Open session. (Manufacturers, their representatives and members of the press cordially invited.)

Collocation:

"Outlook for the approaching year: will present range of prices probably prevail?"

Collocation:

"Trade papers: their relation to jobbing interests."

### FRIDAY MORNING.

#### 9:30 A. M.

Delegates are requested to report promptly.

Miscellaneous business.

Election of officers.

Discussion.

Arranging seat of next convention.

Miscellaneous business.

### FRIDAY AFTERNOON.

#### 2 P. M.

Introduction and installation of officers.

Discussion.

Miscellaneous business.

### FRIDAY EVENING.

Banquet will be tendered by the manufacturers of Cleveland—at the Cleveland Chamber of Commerce—to which the visiting ladies will be invited.

### Entertaining Western Delegates on the Way to the Convention.

A committee was appointed at a recent meeting of manufacturers and manufacturers' agents located in Chicago and vicinity, having in view the desire to make some arrangements by which the delegates and their ladies who will pass through Chicago on the way to the National Hardware Association Convention may be entertained. The committee appointed was as follows: W. H. Bennett, Chicago manager Reading Hardware Co.; S. S. Gould, vice-president St. Louis Shovel Co.; H. H. Roberts, Chicago manager of the *Iron Age*. The programme is to have the delegates meet at the Technical Club House on October 8th, and carriages and automobiles will be in readiness under the control of the committee for a drive through the parks and residential districts of Chicago. It is then proposed to return to the Club House, where the delegates will find a banquet awaiting them, after the adjournment from which they will board the 10:35 P. M. train, reaching Cleveland 7:40 A. M., Wednesday, October 9th, in ample season for the opening session of the convention. The proposed entertainment, it is understood, will be given under the auspices of the recently organized Hardware and Manufacturers' Club of Chicago, they being responsible for the following invitation, which has been forwarded to all delegates west of Indiana:

The Hardware and Manufacturers' Club of Chicago requests the pleasure of the presence of yourself and ladies on Tuesday, October 8, 1901, from 12 o'clock noon until half after 11 in the evening.

The committee have included in their plans arrangements for sleeping-car accommodations from Chicago to Cleveland, and the delegates who are invited, are requested to correspond with H. H. Roberts, secretary of the committee, and he will gladly arrange for any such accommodations as are requested.

### Philadelphia Hardware Merchants' and Manufacturers' Association.

The Hardware Merchants' and Manufacturers' Association of Philadelphia, at a meeting which was held on the 17th inst., adopted the following resolutions relating to the death of President McKinley:

*Whereas*, President William McKinley has been struck down by the blow of an assassin and now lies in honored state in the Capitol of these United States, which he so ably and successfully served; and,

*Whereas*, Our whole country stands dressed in mourning to declare its sad sense of the loss sustained in his death, while from Maine to Texas and from the Atlantic to the far off isles of the Pacific are heard the tones of sorrow and the lamentations of grief; and,

*Whereas*, Even foreign countries join us in these demonstrations of grief and gracefully offer to share our sorrow in loving sympathy; therefore be it

*Resolved*, By the Hardware Merchants' and Manufacturers' Association of Philadelphia:

That we recognize the signal ability, courage, earnestness and personal integrity of our late President, and fully realize the fact that to him were presented some of the weightiest problems and responsibilities which have come to our country since the time of Abraham Lincoln.

That we appreciate his sterling character and his manful part in bringing to our land the public security and prosperity which it now enjoys, and feel that in losing him we lose a man faithful to a high sense of duty and self sacrificing, and devoted in carrying out whatever measures were necessary for our welfare.

*Resolved*, That, as we mourn his loss in being struck down by the hand of treachery, we rejoice that the life and work of President McKinley will for years to come be an inspiration and help to the youth of our land.

*Resolved*, That we place on record this minute of our

affection and esteem, and pray that the Ruler of all nations, who has guided us so marvelously in the past, may be our refuge in years to come, and may now, in this time of sorrow, bring comfort and peace to those who mourn.

The entertainment which it was understood was to be given to the Pennsylvania Hardware and Supply Association by this Association, on September 19 and 20, it has been deemed advisable to postpone for thirty days on account of the prevailing gloom following the assassination of President McKinley.

### New England Hardware Dealers' Association.

The September meeting of the New England Hardware Dealers' Association, which was to inaugurate the Autumn and Winter season, was held, as announced, at the United States Hotel, Boston, September 11th, at 5 P. M., G. W. Burditt in the chair. As no formal entertainment had been provided, the business session was a brief one by comparison with previous meetings. The usual excellent dinner formed part of the proceedings, at the close of which a number of vocal selections were given by J. W. Calderwood, which inspired the customary tokens of approval from those present. President Burditt then called on Charles E. Adams, of Lowell, who had recently returned from a trip abroad. Mr. Adams, as president of the Massachusetts State Board of Trade, had a very enjoyable visit in Europe, as he was entertained by a number of similar organizations in England, the study of the workings of these organizations having engrossed his attention, and also that of the English National Board of Trade. Mr. Adams, in his remarks, mentioned the pleasure he had received by coming in close touch with these important organizations, referring particularly to the London Board of Trade, which held a meeting a short time ago at which representatives were present from 250 Boards of Trade of Great Britain and Ireland, showing to how great an extent these really important associations keep in touch with commercial progress.

### Enormous Demand for Railroad Ties.

Owing to the successful application of quebracho wood for use as railroad ties (as noted in the *Monthly Bulletin*), it may be of interest to countries growing this species of timber to have their attention called to the enormous demand for this important item in railroad development in the United States. A new mile of standard single track railroad, without taking into consideration the switch tracks and side tracks, requires about 4,500 ties. The average life of a railroad tie is about five years, so that in ten years a railroad will use ties at the rate of about 9,000 for every mile of track. This means that the Pennsylvania Railroad Co. requires 2,500,000 ties for that part of its system east of Pittsburgh every year; that the New York Central requires nearly 2,700,000 ties between New York and Buffalo, and that the Erie road requires about 2,000,000 every year between Jersey City and Salamanca. It is estimated that under the best possible conditions, and making no allowance for fire and other accidents, it would require a plot of ground 2,000 acres in extent to grow 1,000,000 railroad ties, and that thirty years would be needed to develop them.

It has been estimated that in every 30 feet of standard single track road there is nearly a ton of steel, but the cost of ties for the same distance is even greater than that of the metal. It is, therefore, a problem of increasing perplexity to railroad men to obtain a sufficient supply of ties or "sleepers." Nothing has ever been found that will successfully take the place of the hand-hewn tie of young, growing timber, and many methods have been applied for prolonging the life of the individual tie.

Quebracho wood, by reason of its extreme hardness and durability, goes a long way toward settling the question satisfactorily, the only drawback at present being the lack of sufficient receipts of this valuable wood.

**A Novel Battle-Ship.**

A great deal of attention has been given to the dressing of windows of Hardware stores of late in every section of the country, and the ingenuity of the skilled artisan has frequently been called into requisition to construct novel appliances from ordinary material found in almost any stock of Hardware. The genius shown in bringing widely different parts together to form one harmonious whole is admirably demonstrated in the illustration we present showing a National ironclad Battle Ship, and one which proved a great attraction to the curious crowds, when exhibited in the windows of L. H. Kohn, 1601-1607 Polk Street, San Francisco, Cal. The hull is two cross-cut saws, and masts brass rods and spool wire, porcelain insulators, hose couplings, hose menders, bells, curling iron heaters, faucet handles, etc. The smokestacks were three Welsbach chimneys with building paper inside. The forward turret was a wire gas toaster

C. H. KOHN'S NOVEL WINDOW DISPLAY.

with hose pipe for guns. The after turret was an alcohol stove, on which was placed a mouse trap and Welsbach gas burners, for guns, while on the side were guns of lamp curling iron heaters and bicycle pumps. The funnels were lawn sprinklers. The davits in the rear were gas hose stork necks, and the boat a toilet sad iron with the handle off. Chain rope and a number of small implements lay on the deck, which was a piece of wood painted with aluminum. The anchors were corkscrews and the chains key chains. Small electric lights are seen in the rigging; also flash light on forward mast, and red and green electric lights on either side. The decorations were in honor of President McKinley upon the event of the launching of the *Ohio*. It is stated that when the lights were on at night, it made a very pretty display.

**PATENTS.**

The following list of Patents, Trade Marks and Designs of Interests to our patrons are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

**PATENTS EXPIRED SEPT. 9, 1901.**

- 304,700. CARPET TACK EXTRACTOR, C. C. Brown, Worcester, Mass.
- 304,743. HANDLE FOR PITCHERS AND HOUSEHOLD ARTICLES, J. C. Milligan, Brooklyn, assignor to the Lalance and Grosjean Mfg. Co., New York, N. Y.
- 304,763. KEY-FASTENER, S. K. Sumerwell, Covington, Ky.
- 304,778. DOOR AND GATE SPRING, J. Broughton, Brooklyn, N. Y.
- 304,807. WRENCH, B. Elmore, Etna, Cal.
- 304,814. LOCK-HINGE, D. H. Fitzgerald, Reading, Pa.
- 305,028. LIFTING JACK, C. A. Sulzman, Waterford, N. Y.

**PATENTS ISSUED SEPT. 10, 1901.**

- 682,179. HASP-LOCK, I. C. Drake, Orting, Wash.
- 682,195. COMBINED MOP AND BRUSH, E. Hilker, Chicago, Ill.
- 682,214. SEDIMENT COLLECTOR FOR COFFEE POTS, ETC., P. P. Martin, Snyder, Tex.
- 682,241. WRENCH, M. Cooke, Vista, Iowa.
- 682,263. BIT BRACE, C. S. Du Mont, Buffalo, N. Y.
- 682,508. LOCK, C. T. Thomas, Rushville, Ill., assignor of one-half to S. Davis, same place.
- 682,531. CAN OPENER, N. Cloutier, Attleboro, Mass.
- 682,590. GRADUATED LAWN OR GARDEN SPRINKLER, T. J. Greer, St. Helena, Cal.

**PATENTS EXPIRED SEPT. 16, 1901.**

- 305,037. VISE, A. L. Adams, Cedar Rapids, Iowa.
- 305,041. WINDOW WASHER, J. F. Bentz, San Francisco, Cal.

- 305,054. BIT-BRACE, W. F. Dake and E. B. Dake, Grand Haven, Mich.
- 305,090. BIT-STOCK, W. C. Marr and A. J. Maughlin, Onowa, Iowa.
- 305,119. COAL SCUTTLE, James Van Hagen, Troy, N. Y.
- 305,138. SASH-FASTENER, Martin Bourke, Youngstown, O.
- 305,258. CORKSCREW, Martin F. Williams, Bastrop, La.
- 305,274. TRANSOM-LIFTER, S. A. Bishop, Smethport, Pa.

**PATENTS ISSUED SEPT. 16, 1901.**

- 682,637. COMBINED RULE AND SQUARE, W. F. Puffer, Newton, Ala.
- 682,657. HASP-FASTENER, D. D. Wirt, Independence, Mo.
- 682,675. SLIDING DOOR FASTENER, John Denes, Wilmington, Del.
- 682,681. NAIL OR SCREW SET, P. N. Haas, Allentown, Pa.
- 682,701. LOCKING PLIERS, M. M. Howland, Providence, R. I.

**Demand for Farming Machinery in the Netherlands.**

Consul Hill reports from Amsterdam, July 31, 1901, that as a result of the increased prosperity among the dairy farmers, there has been a considerable demand in the Netherlands during the last three years for mowers, reapers, binders and rakes. The difficulty in hiring farm labor at the very low wages offered, he adds, has also had the effect of increasing the purchase of agricultural machines. American plows, continues the consul, do not meet with favor, German plows being preferred, while horsepower thrashers, the only kind in use, are imported principally from England. The consul suggests the southern part of the Netherlands as a possible market for fruit driers and fruit machinery.

### Champion Steel Range Co.

The Champion Steel Range Co., whose advertisement will appear in next issue, is one of the most enterprising of the establishments devoted to the manufacture of this modern product. The company was established twelve years ago, and it is doubtful if any similar concern in the country has attained to a higher degree of perfection in product in so

make by skilled workmen in every essential particular, and the reputation that they enjoy with the entire Hardware trade is that their production is first-class in every respect, while in actual use they have proven durable and thoroughly efficient. The proprietors, C. H. Miller and Frank P. Wood, are gentlemen of experienced methods and untiring energy, and are fully able to maintain the pronounced success

CHAMPION STEEL RANGE CO.'S PLANT.

short a period, the result of which is that their trade has been extended throughout the entire United States, and is constantly increasing in volume. This condition has not been brought about by accident, but is attributed entirely to

already attained by them. The office and salesroom are located at 131-137 Viaduct, and the works at 35-39 West Centre, corner of Washington Street.

### Points About Type.

All type is made on the point system. This is an arbitrary system of measurement, and there are 72 points in an inch; therefore, a six-point type means that there are twelve lines of type of that size in an inch. In addition to this system of measurement the smaller sizes of type, such as are commonly used for reading matter, are named. Agate measures 14 lines to the inch; nonpareil, six-point, or twelve lines to the inch; brevier is eight-point; long primer is ten-point; pica, twelve-point, or one-sixth of an inch.—*Pacific Coast Advertising.*

### An Unfortunate Inventor.

One hundred years ago Philippe Lebon awoke to find himself famous as the inventor of gas in France, says the *Paris Messenger*. The preceding evening he had lighted the saloons and gardens of the Hotel de Seignelay, in the Rue St. Dominique, with an illumination which seemed to deal a death blow at oil lamps and candles. But the poor inventor perished in obscurity, ruined by the cost of his researches and experiments with gas which he prophesied would be used not only for lighting, but heating and power. His prognostications have all come true, though it has been given to others to reap the honors and the rewards. A street at Batignolles bears his name, however, and that is something. Gas seems a poor thing to build a reputation upon in any case. A hundred years after Lebon made it twinkle into existence we are flooded with new lights of all sorts, by the side of which gas is a gloomy glimmer, and yet the Bois de Boulogne and the Tuileries Gardens spurn them one and all, thereby affording a refuge for folk who love darkness rather than light for obvious reasons.

C. H. MILLER.

the usefulness of the output, its high character, and to the enterprising and energetic methods of the company's manager. This firm are the manufacturers of the Champion, Champion, Jr., Active Champion and Marquart double flue, hot blast steel ranges, giving employment in their works (an illustration of which we present herewith) to upwards of 60 hands in its several departments. All of their products are

### National "Roller Bearing" Carpet Sweepers.

The "Roller Bearing" Carpet Sweepers recently placed on the market by the National Sweeper Co., of Marion, Ind., as shown in the accompanying cut, are creating a great deal of interest among those buyers who are at all interested in Carpet Sweepers. This is the newest and latest feature in Carpet Sweeper construction, and it is exceedingly practical, which is something that cannot be said of a number of inventions. It forms a very simple device, there being no complicated parts or delicate springs to get out of order or wear out. No part of the device shows from the outside of the Sweeper, and it adds very little weight, as the four bearings and parts do not weigh to exceed half an ounce. It consists of rollers 3-32 of an inch in diameter and  $\frac{5}{8}$  of an inch in length, turned from high grade steel, which are placed inside of the Sweeper wheel hubs in such a manner as to revolve freely around the axles. The end of the hub is fitted with a dust cap which makes the bearings dust proof. This device does away with practically all friction, and places the "National Roller Bearing" Sweepers in the front rank. The company announces that hereafter their highest grades of Sweepers will be furnished with "Roller Bearings" when desired, without extra charge. This company has also just placed on the market a new Sweeper known as the "Marion Queen." The box or case is made of select veneers, such as figured birch, mahogany, white magnolia, ash burl, Hun-

### A Country Ironmonger's Training.

The majority of ironmongers a quarter of a century ago were practical men. Their billheads proclaimed them to be general, furnishing, and builders' ironmongers, dealers in bar iron, oil and color merchants, bellhangers, gasfitters, whitesmiths, blacksmiths, tinmen, coppersmiths, braziers, etc. Tradesmen of this stamp took trained apprentices, but invariably required a premium, varying from 35l. to 120l., for a term of five or seven years. The wages of the apprentice commenced with the second year of apprenticeship, the usual rate being (outdoors) 3s. per week, and rising 1s. per week in each succeeding year, so that, roughly speaking, the premium was ultimately returned in wages. The earlier part of the apprentice's time was spent in the workshops, the lad's duties being to clean his master's boots, take down the shutters, sweep out the shop, dust, clean the tin and copper ware, run errands, and keep the warehouses, and keep the goods generally in a clean and fit condition.

Harder and dirtier work was done then than nowadays. Nails were not put up in cardboard boxes, or tar, pitch, soft-soap, paint, etc., in tins. The last-named commodity the apprentice learned to make, and many a weary hour was spent with the pommel and stone in grinding colors. Pitch came in 3-cwt. casks, and had to be chipped out and papered in different weights—a job usually reserved for the Winter. Horsenails arrived in bags, and were weighed up into thousands.

The hours of business were from 7 A.M. till 8 P.M., with an extension to 10 P.M. on Saturday, and no early-closing day. A list of sixteen rules hung in the shop in which the writer served his apprenticeship, and was rigidly adhered to. Before a new assistant was engaged he was referred to these rules, and if he objected to any of them he was politely told to seek a berth elsewhere. One rule which was often objected to was that running: "All errors, breakages, and miscalculations to be deducted from salary."

Travellers were far less numerous then than at present. I should say that we saw one where twenty call now. When the factor's representative came, which was twice a year, he generally took a whole week to book his orders. An inquiry for anything out of the common was always sent to the factors, who, however, as I have since found out, made frequent errors.

With telegrams costing 1s. each, "wiring" was but seldom indulged in, and if it was possible to make up a small cask of goods when anything special was required, this was done in order to save carriage by passenger-train.

The Ironmonger was religiously kept in the office, and woe betide the apprentice who was caught looking at it. It was an act of high treason for him to read his trade-paper. As a special favor, however, the apprentice was occasionally allowed to take home a trade-catalogue at night for study. After three years' experience every apprentice was supposed to know exactly such matters as what sheets of tin to give out for making various articles. How many apprentices of the present day know the number of sheets in a box, or what the marks denote?

In stocktaking every parcel was undone and the contents counted. If new outside paper was required this was supplied before the parcel was replaced on the shelves. Where the stock was exhausted the paper was kept in the same place for reference as regards number and price, and it was not put away until new goods had arrived and were duly marked off.

No invoices were allowed to be seen by the apprentice until his last year, when the hieroglyphic cost-mark was revealed unto him. He was also then allowed to assist fully with the books.

Such was the grounding in his trade which the budding ironmonger received. Those were the "good old times" which we hear constantly spoken of; but how many of the present day would like to revert to that style of tuition and training?—*Ironmonger* (England).

ROLLER BEARING CARPET SWEEPER.

garian ash, bird's eye maple, etc. Particular attention has been paid by the company to the finishing of the trimmings, the bale, and plates and other metal parts being duplex plated, and this gives them a finish which will not rust or lose luster. No pains have been spared to make the finish of the boxes of all their Sweepers the best that high grade materials and first-class workmen will permit. To those interested in Household Specialties of this character, we would suggest that they write the National Sweeper Co. for their catalogue and prices.

A stinging bee's like a sarcastic man; he can't use his weap'n without hurtin' hisself.

### Bommer Bros.' Pan American Exhibit.

The novel exhibit of Bommer Bros., 257-271 Classon Avenue, Brooklyn, N. Y., is one of the best designed and handsomely appointed of any of the Hardware exhibits, showing their Spring Hinges and Ball Bearing Floor Hinges in a number of styles and finishes. The panels are set off by a carved mahogany fixture. There is one exceptionally heavy solid mahogany swinging door 4 feet wide by 8½ feet high and 3 inches thick hung on 12-inch solid bronze metal double action Hinges. Two double acting *cafe* doors are hung in place of the usual plate glass. There are also two mahogany

turers' agents of stoves, ranges, furnaces, refrigerators, gasolene, gas and oil stoves, and a complete line of fireplace fixtures. One of the specialties manufactured by this company, and for which they have enjoyed a wonderful success, is their Model Stove Truck, which is acknowledged by those familiar with it as being one of the most model of its kind. By referring to their advertisement, page 37, of this issue, a cut of this truck is shown. We are much pleased to recommend their name to the Hardware dealers of the country, and feel sure that any business arrangements between them and the above company would prove of mutual benefit.

BOMMER BRO.'S PAN AMERICAN EXHIBIT.

vestibule doors, one swinging double action and the other single action upon bronze metal Bommer Ball Bearing Floor Hinges. These doors have single action *cafe* doors in place of panels. The ease and lightness of action of all these doors is especially noticeable. There are also some mounted floor Hinges conveniently placed for handling and examination, and also some regular Bommer Spring Hinges made to take apart, showing the interior steel construction and demonstrating in a characteristic manner why that easy motion is given to the door for which the Bommer Hinges have become well known and popular with the trade.

### The S. M. Howes Co.

The business of the S. M. Howes Co., 40-46 Union Street, Boston, is continuously on the increase, and the company is recognized as one of the representative concerns in their line of business. They are manufacturers and manufac-

### Torrent Pump & Fence Co.

Torrent Pump & Fence Co., Cleveland, since occupying their new premises, have thoroughly fitted up their plant for their special line of work and are now prepared to do a general machine shop business such as Drilling, Lathe Work, Planing, Bolt Cutting and Threading, Pipe Cutting, Threading and Fitting; also to make patterns of any special design, have castings made from them, and fit them up as desired. They also design and build special machines for special purposes, including Automatic Wire-Bending Machines, etc. They will be pleased to submit figures on receipt of specifications, and do work to the best advantage, keeping careful time on the same.

"Don' pass too much o' yoh time whar dey sells gin," said Uncle Eben. "When a man gets to be a saloon fixture, he generally goes to smash in a hurry, wifout waitin' foh a lady to come roun' wif an axe."—*Washington Star*.

## RECENT TRADE PUBLICATIONS.

SYRACUSE WIRE WORKS, Syracuse, N. Y., have recently issued a catalogue showing their products, of 32 pages, oblong shape, printed on good paper and illustrated throughout. It constitutes their Catalogue No. 17, and shows designs of special metal work wrought in brass, electroplating, bronze, etc. This company make a specialty of designs from architects' drawings, thus making the work in keeping with all kinds of wood and stone used in fitting up an office. The designs shown indicate a large variety in the way of application, from Bank and Office railings to Elevator Enclosures and Cars pertaining to the same. They are also large makers of Wire Racks for phonograph records. In connection with this catalogue, they also send a number of circulars having reference to Wire Mats, Counter Guards, Coal and Sand Screens, Window Guards, Flower Stands, etc., etc.

IOWA FARMING TOOL Co., Fort Madison, Iowa, have recently issued and distributed to the Hardware trade one of the handsomest catalogues in the interest of their productions that we have had brought to our attention. Pamphlet form, of 130 pages, printed on excellent coated paper in two colors, with fine half-tone illustrations throughout, showing every possible variety of goods, with the manufacture of which this large plant has been identified for many years. Everything in the printed line that emanates from this company has been of the highest style of the printers' art, and this catalogue forms no exception. It is complete in every respect, full descriptions are given, with dimensions, and in connection therewith a telegraphic code covering every possible communication that could be deemed desirable. Altogether, it is a catalogue covering an important line worthy of the attention of every reader of *Hardware*. If not already in his possession request should be made for a copy.

UTILITY MFG. Co., 16 S. Frederick Street, Baltimore, Md., issue a leaflet catalogue of 12 pages covering their line of specialties, which include Rotary Sifters, Wire Strainers, Easels, Plain and Painted Tin Horns, Potato Mashers and "Utility" Scoops. It looks like a line of easy sellers, such as could be added to any Hardware stock with satisfaction as far as profit was concerned.

PITTSBURGH STOVE AND RANGE Co., Pittsburgh, Pa. Four-page leaflet printed on excellent paper, and illustrated by unusually fine half tones, exploiting their "Monarch Cinderella" line of Parlor Stoves, in which the numerous excellences of the Self-Feeding, Base Burning, Double Heater, which is illustrated, are advantageously set forth.

BUHL STAMPING Co., Detroit, Mich. Pamphlet catalogue No. 41 of 22 pages, covering their line of Tubular Lanterns, the several varieties of which are fully illustrated and described in its contents, which also gives list prices and shipping weights and sizes in bulk of all packages containing these goods, so that freight may be accurately figured previous to ordering. An index and telegraph code are also attached, making it a very useful catalogue of its kind. They have also issued Catalogue 42, covering their line of Sanitary Milk Cans and Can Stock, which is a neat little pamphlet of 32 pages, showing all the various styles of Can and Can Stock manufactured by this well-known company. The many improved appliances made by this company in connection with dairy supplies are fully illustrated and described. This catalogue, similar to the other above mentioned, gives dimensions of crates and shipping weights of all Buhl Can Stock, to-

gether with a condensed telegraph code by which goods may be economically ordered. Many testimonials are given in the back part of the catalogue, shown in the attractive form of a photo-engraving of the letter itself, attesting its genuineness.

ENTERPRISE MFG. Co., Akron, Ohio, have recently published and are now distributing to the Hardware trade their Catalogue No. 20, covering the largest line of Fishing Tackle of every description that has been brought to our attention. It includes Artificial Fish Baits and Anglers' Specialties, of which they claim to be the largest manufacturers in the United States; all sizes and styles of Trolling Spoons, American Spinners, Hard and Soft Rubber and Phantom Minnows, Frogs, Crawfish, Grasshoppers, etc., and every variety and pattern of bass, salmon and trout flies. The company are well-known as the manufacturers of Pflueger's Luminous Bait, which has been before the sportsmen of the country successfully for twenty years. Many other specialties shown in this catalogue are of Mr. Pflueger's invention. All of these are illustrated in a manner readily understood, cuts being full size, forming certainly an extremely complete catalogue. A portion of its contents is given to the description and illustration of a large line of Reels made by this company, and at the present time forming a subject of their advertisement in *Hardware*. They show these desirable goods in upwards of 60 varieties, running from the plainest Single Action, with or without click, to the most delicately constructed and finest article of this description possible for the manufacturer to turn out. These are fully illustrated and described, dimensions being given in every case, and list prices accompanying the same, subject to a discount to the trade, cuts being actual size. Included in the contents having reference to Reels are shown several styles of the Salt Water Reels which are built extra strong, with back sliding click and drag; also the same constructed of fine rubber with steel pivot. Both styles of these Salt Water Reels are of the multiplying character. The Kentucky Reel is also illustrated manufactured from extra quality German silver, full steel pivot, with and without jewel. Reels for salmon and tarpon fishing are included in the assortment, which are quite large and built extra strong with steel pivot, metal and rubber band, and back sliding click. Those of our readers handling goods of this description will find their catalogue an extremely important one, as almost every possible requirement in the way of anglers' supplies can be obtained from its contents.

STANDARD TOOL Co., Cleveland, Ohio. Booklet catalogue, envelope size, evidently intended for distribution at the Pan American Exposition, printed in Spanish, handsomely illustrated and printed, with tinted background on every page, having a very attractive cover as well, forming a booklet likely to be retained by the recipient.

J. W. DUNHAM & SON, Berea, Ohio. Oblong pamphlet catalogue of 20 pages covering a line of Land Preparers, forming part of the agricultural machinery manufactured by this firm. Fully illustrated throughout, descriptions being given of the various Rollers, extending in size from a Hand Roller of two feet wide, to Land Rollers of seven feet in width and made in a number of styles and dimensions, weighing from 225 pounds to 1,000 pounds, according to size.

## NEW GOODS AND SPECIALTIES.

### Rollman Apple Cutter and Corer.

Rollman Mfg. Co., Mt. Joy, Pa., among the many desirable specialties which they manufacture for the Hardware trade, are introducing the Rollman Apple Cutter and Corer, which is shown by the accompanying cuts. In its construction it

FIG. 1.

FIG. 2.

is formed of a frame of cast iron, tinned, the plates being securely soldered in so as to give it sufficient strength for the use for which it is intended. The No. 7 Cutter, which is the one shown in the illustration, cuts apples into eighths, and is the one designed for general use. They also manufacture a No. 9, which is not illustrated here, which cuts apples into twelfths, and more suitably preparing them for the use of bakers, especially pie bakers. The Rollman Apple Cutter and Corer, as it is distributed to the trade, is shown in Fig. 1,

FIG. 3.

while Fig. 2 illustrates how it is held in position on top of the apple preparatory to its being pressed down to cut and core the apple, the manner in which this is done being shown in Fig. 3. It is quite a unique specialty and deserves an extended sale.

### Hartzell Kitchen Knife No. 475.

E. Hartzell Cutlery Co., Gettysburg, Pa., make a specialty of the Kitchen Knife which we illustrate. It is a knife that is designed expressly for the purpose for which it is sold. The ordinary butcher knife is considered as being too heavy and clumsy for cutting up fowl, game, fish, etc., while the so-called kitchen knives now on the market are usually of such a grade of material, and being made with blunt points,

HARTZELL KITCHEN KNIFE NO. 475.

that they are deemed useless for this kind of work. This kitchen knife has a blade  $4\frac{3}{4}$  inches long, hammer forged from bars of best cast steel, making a narrow tapering blade and is tempered to the right degree to carry a good, keen cutting edge. The handle is of beech wood of the proper size to allow a good grip, and while it is small enough for paring and cutting up vegetables, it is also well adapted for such kitchen use as cutting up fowl, game, fish, etc. The manufacturers state that in designing this knife they had in view the fact that to make an all-around kitchen knife it must

have the best of material, be strong enough in the blade and handle to stand strong service, and yet narrow enough to be used in cutting around bones and joints, while at the same time sufficiently adapted for paring fruits and vegetables. Every blade is guaranteed and sales have so exceeded the estimate calculated upon by the manufacturers, that they already have contracts that are running a month ahead. The manufacturers solicit correspondence with the jobbing trade on these goods, with the assurance that the price will be regarded as favorable for their introduction where they are not already known.

### Improved Screw Pitch Gauge.

Sawyer Tool Co., Fitchburg, Mass., have recently placed on the market an improved patented Screw Pitch Gauge, an illustration of which we give herewith. This gauge has every pitch used by a machinist from 4 to 60 inclusive, and the manufacturers state it is a tool they have taken great pains with and propose to make one of their leaders. The blades tapering almost to a point allow them to be used in the smallest possible hole a gauge can be used, yet at the same time are not weakened or liable to bend. The finer pitches are cut upon each edge of the blade, which reduces the bulk of

IMPROVED SCREW PITCH GAUGE.

the tool nearly one-half. The convenient form in which it is made enables the desired pitches to be found readily and renders it particularly a pocket tool.

### Spring Dividers and Calipers.

Brown & Sharpe Mfg. Co., Providence, R. I., are placing before the Hardware and machinists' supply trade a set of Spring Dividers and outside and inside Spring Calipers, illustrations of which will be found in this article. They state that this line of improved tools was designed after careful consideration as to the requirements of such tools, and the same care and attention to every detail is followed in their manufacture as is noticeable in all of the Brown & Sharpe tools. The principal features of these tools, aside from the superior quality and workmanship, are the spring and nut. The spring is of an improved form, unusually stiff and skilfully tempered. The ends of the spring terminate in convex lugs that fit into concave grooves, accurately milled in the ends of the legs, thus insuring the spring being held firmly in place and preventing the legs from springing sideways. The legs are dropped steel forgings of even taper and fine finish. The screw is of steel, hardened to prevent wear. The spring nut used in connection with these goods, it will be noticed, is of new design and made on the principle of the spring chuck with the jaws hardened. It is positive in action when closing and the thread engages the screw with

the slightest pressure upon the end of the jaws, while the withdrawal of the pressure causes the nut to release at once without regard to the manner in which it is held, the nut

knife fastening and several other improvements. It is claimed that by the use of this tool the labor of tenoning large spokes is reduced three-fourths.

FIG. 1.—SPRING NUT OUTSIDE CALIPERS. FIG. 2.—SPRING NUT

then sliding freely on the screw. It is dust proof and combines the security and smoothness of movement that the solid nut possesses, with the added advantage of quick adjustment. A thumb attachment is provided for the spring dividers. The outside Spring Calipers and Spring Dividers are made both with spring nut and solid nut in 2½, 3, 4, 5 and 6 inch

FIG. 3.—SPRING NUT DIVIDERS.

FIG. 4.—SPRING NUT INSIDE CALIPERS.

sizes, and the inside Spring Calipers with both kinds of nut in 3, 4, 5 and 6 inch sizes.

#### Wood's Fore Auger.

A. A. Wood & Sons Co., Atlanta, Ga., are manufacturing and placing before the Hardware trade the Fore Auger, of which we give an illustration herewith. The tool, which is patented, is one designed to enable wagon and carriage makers to tenon large spokes with the same ease as smaller ones. It is noted that large spokes are much harder to reduce with a single cut by a hollow auger. This tool will reduce spokes for 1¼ inch tenons or under. It is explained

WOOD'S FORE AUGER.

that it leaves the tenons slightly larger than 1¼ inch size from which any one of the sizes ordinarily used may be easily cut with a hollow auger. The knife is referred to as having a shearing cut which makes it work easily and produces a bevel shoulder which is readily squared by the hollow auger in cutting the smaller tenon. It acts as its own pointer, and where tenons smaller than 1¼ inch are to be cut any pointer will point the spoke to the proper size. The tool is provided with a new design of stop, a new and superior

#### A New Skate for Children.

The old established firm of Barney & Berry, of Springfield, Mass., are introducing through the Hardware trade a thoroughly practical skate for children. We present an illustration showing it is fitted with double blades, which makes it much easier for the little ones to master the art of skating, and at the same time obviates any great strain being put upon their slender ankles, making skating accordingly easier and more enjoyable. The common-sense plan of its construction, and its adaptability for the use of children cannot help but make it a popular seller. The constructive excellence which has always distinguished the Barney & Berry skates will be found to exist in this new skate. The absence of any bolt or rivet heads on the forward part where the sole of the shoe must rest; special means by which the runners of the two parts are always in alignment; a secure extension fastening of the proper construction; beauty of design, and improved finish are among its superior features.

CHILDREN'S EXTENSION SKATE.

As will be seen from the cut, this skate is a remarkable departure from the common skates in vogue, and as well such an improvement over them that it cannot help become the most popular for children. All youngsters the world over where water freezes are wont to skate or slide upon any bit of ice obtainable. Small ponds, ditches, sloughs, roadside puddles, and even ice-covered roads and sidewalks are alike agreeable to them. The more convenient to home the better. As this skate is peculiarly adaptable to use on ice and snow-covered walks, and is as well an excellent ice skate, it will, undoubtedly, prove in great demand wherever introduced.

#### Acetylene Light House.

Experiments with acetylene as a light for lighthouses have been on trial for some months past in the harbor of Genoa, Italy, with satisfactory results. The inventor had to guarantee better illumination than that given by the petroleum burners of the lighthouse, and a constant light, without smoke or interruption, for 15 hours at a time. An apparatus, with four separate generators, was installed, and for a period of 100 days of 10 hours each the lighthouse was worked with the new gas without the slightest difficulty. At a distance of 40 nautical miles from Genoa is the electrical light of Tino, and it was observed that, while the Tino light could never be seen at Genoa, the Genoa acetylene light was visible at Tino.

#### An Old Acquaintance.

They met in a department store, shopping.  
 "Why, how do you do?"  
 "I'm well; and you?"  
 "First rate! Why, I haven't seen you for a long time!"  
 "No; it must be five or six years!"  
 "All of that! Do you know I never would have known you if it hadn't been for that hat."—*Yonkers Statesman*.

### Locks.

It is said that the Icelanders never lock anything; Americans lock everything, lock themselves in and out of their houses, into one room or out of another. We lock up our trunks, drawers, valises, hats, canes and dogs. Locks for every conceivable purpose, from the tiny bracelet on baby's wrist to the massive prison cell, are peculiarly of American manufacture.

But nowhere will be seen so much misapplication of locks as here in our own country. The average carpenter seems to be ignorant of how to apply an ordinary lock so that it will work properly.

We laugh at the simple man who had seen a wooden turn button screwed on to the jamb to keep the shed-door closed, and who, wishing to secure the barn door, placed the button on the door and wondered why it did not keep the door shut. The writer has actually seen locks so applied that the door could be pushed open but not shut without turning the knob.

Again, the "hand" of doors seems to be lost sight of, and if a lock does not appear to be right, is more often than otherwise simply put on upside down. This is a chief cause of trouble with cylinder locks. One manufacturer always stamps the cylinders "this side down," and I have known first-class (?) carpenters to put a left-hand lock on a right-hand door, put "this side down" and then wonder at the stupidity of the maker in so marking his locks that they will not go together properly. Intelligence among average mechanics is a mighty scarce commodity, and, like truth, is used sparingly.

The Hardware clerk, in selling a lock, should bear in mind that there are four kinds of locks, viz.:

1, Right hand; 2, left hand; 3, right hand, reverse bevel; 4, left hand, reverse bevel, and he should find out before letting a lock go for which door it is to be used. To assist in thus determining, remember that the "hand" of a door is always determined from the *outside*; that is, the street side of front or vestibule doors; the corridor side of a room door; the room side of a cupboard or closet door. Now, standing on the outside, if the door has hinges on the right, and swings away from the person entering, to the right, it is a regular right-hand door. If the door swings away to the left, it is a regular left-hand door.

But if where the hinges are on the right and the door swings toward the person approaching from the outside, it is a right-hand reverse bevel, and if it swings to the left, with hinges at the left-hand side, it is a left-hand reverse bevel. Locks are by the makers designed for each of the above, and if clerks would be sure the proper lock is sent, there would be less trouble and less imputation that he does not know his business.—F. A. SOUTHWICK.

### The Mackie Steel Tube Mfg. Co.

The Mackie Steel Tube Mfg. Co., Hammond, Ind., have built up within a very short period an important business in the manufacture of sheet steel tubing. It is hardly two years since they began to make brazed tubing on a small scale in Chicago. Their process proving a commercial as well as a mechanical success, they removed to Hammond last year, taking possession of a plant used for other purposes but adapted for the manufacture of their product. The property comprises two acres, which is well covered by buildings. At present the company are working into tubing over 25 tons of sheet steel daily, making a product ranging from  $\frac{1}{4}$  inch to 2 inches in diameter. The tubing is made in any length, and of sheets of any thickness, from No. 12 to No. 30, as may be required. The company make both brazed and butted tubing, either plain or nickel plated, for umbrella manufacturers, bedstead makers, stove and range makers, implement manufacturers, car builders, running gears for bicycles, and automobiles, etc.

The manufacture of brazed tubing of heavy gauge and in long lengths has been found an extremely difficult operation. In the halcyon days of the bicycle trade, quite a number of establishments were successful in turning out short lengths of brazed tubing, made of thin sheets. This, however, was a very different matter from using No. 12 to 16 sheets and making tubing 15 feet or more in length. This is regularly done by the Mackie Steel Tube Mfg. Co., and they claim to be the only manufacturers in the country who have made a success of it. Their plant is so well equipped with special machinery that they are not only able to turn out any size or length desired, but can furnish tubing bent to any form. Metal bedsteads are now made in highly ornamental designs, with numerous scrolls and bends. The company receive sketches from the bedstead manufacturers and furnish tubing, accurately duplicating the pattern, without buckling or flattening.

For a great deal of work, as, for instance, metal bedsteads, sheet metal tubing has been found preferable to merchant pipe turned out by the makers of wrought pipe for gas and water. The latter is not only much heavier than necessary for such purposes, but the surface is rough, requiring much work in polishing for nickeling or enameling. Sheet steel, on the other hand, has a smooth and even polished surface to begin with, and any gauge desired can be selected for the tubing, so as to make it quite light or fairly heavy. The brazing done by this company is accomplished by a process peculiar to themselves, making an invisible seam and a joint which is claimed to be permanent.

They have also their own process for beveling the edges of strips of sheet steel by which they are enabled to produce butted tubing with practically a lap joint.

The company are large manufacturers of umbrella rods, which are made of No. 22 sheet steel. The slots for the catches are stamped into the sheet, and a piece of steel wire is inserted for the tip, while it is being formed into a tube. Of these rods, the company have a capacity of 780 dozen per day, enameled or nickeled, ready for use by the umbrella manufacturer.

Another product of these works is the Mackie bed caster, specially designed for metal bedsteads, made with a cork socket to cling to the inside of the tubular bed post.

The company have found the demand for their products running so much in excess of the capacity of their plant that they are considering its enlargement. The officers are as follows: Charles Mackie, president; Peter Thorsen, vice-president and general manager; David G. Brauckman, second vice-president; John A. Armbruster, secretary and treasurer. They maintain a city office and sample room at 166 Lake Street, Chicago, Ill.—*Iron Age*.

### New Style of Post Cards.

The illustrated postal cards, which, says the *Baltimore Sun*, seems to retain its vogue in Europe, although it never was a craze here, has taken on a new phase. Instead of views of scenery or quotations now there are photographs of traveling friends or relatives grouped in the familiar fashion of the Summer resort tintype. Many a vagrant American has sent to this country during the Summer such postal photographs, which are an improvement on the old cards in that they may be more readily recognized. It is much more interesting to learn at a glance how Amelia or any other member of the family is looking than to look at a picture of the shrine containing the bones of the 11,000 virgins. So the new style of card has proved much more popular than its predecessors.

•

"But, suppose," one of the spectators said, "the parachute should fail to open after you have detached it from the balloon—what then?"

"That wouldn't stop me," answered the daring aeronaut. "I'd come right on down."—*Chicago Tribune*.

# REVIEW OF THE MARKETS.

**Wire Nails:** A steady and confident demand is the prevailing feature of the Wire Nail market, and the mills are working to the extent of their ability to get a complete assortment of sizes ahead in order to fill orders more promptly and with satisfaction to their customers. Quotations continue as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots.....	\$2.80
"    less than carload lots.....	2.85
To retailers in carload lots.....	2.40
"    less than carload lots.....	2.50

**New York.** The demand for Wire Nails continues steady and the market firm. The following prices represent the market:

To retailers, carload lots on dock.....	\$2.58
Small lots at store.....	2.60

**Cut Nails:** No change of moment is noted in the Cut Nail market as to prices and condition of the market. Considerable difficulty is experienced by the mills in making prompt shipments with full complement of sizes. Prices are quoted as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than carload lots.....	\$2.10 to 2.15
Carload lots.....	2.05

**New York.** In the local market prices are as follows:

To jobbers in carload lots on dock.....	\$2.18
"    less than carload lots on dock.....	2.23
Small lots from store.....	2.25 to 2.30

**Barb Wire:** The Barb Wire market is in fine condition with a demand indicating features of strength and stability. Supplies are obtainable by jobbers with greater regularity than was previously the case, as increased facilities at the mills have been pushed to the utmost. Quotations remain without change. F. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted.....	\$2.60
"    Galvanized.....	2.90
"    less than carload lots, Painted.....	2.65
"    Galvanized.....	2.95
To retailers in carload lots, Painted.....	2.70
To retailers in carload lots, Galvanized.....	3.00
To retailers in less than carload lots, Painted.....	2.80
To retailers in less than carload lots, Galvanized.....	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

**Plain Wire:** Demand continues in good shape, and prompter shipments can more confidently be relied upon. Quotations remain as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base sizes.	
	Plain.	Galv.
To jobbers in carload lots.....	\$2.25	\$2.65
"    less than carload lots.....	2.30	2.70
To retailers in carlots.....	2.35	2.75
"    less than carload lots...	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence Wire Advances (Catch Weights).			
Nos.	Base.	Galvanized.	
6 to 9.....	\$0.05 advance over base.....	\$0.40 extra.	
10.....	.10	.40	"
11.....	.15	.40	"
12 and 12½..	.25	.40	"
13.....	.25	.40	"
14.....	.25	.40	"
15.....	.45	.75	"
16.....	.55	.75	"
17.....	.70	1.00	"
18.....	.85	1.00	"

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

**Shovels and Spades:** At the recent meeting of the manufacturers, prices that have been prevailing in the trade were confirmed and continued. As outside competition is increasing to a noticeable degree, a modification of the present prices, regarded by the trade as deserving some attention, may be among the possibilities of the future.

**Cordage:** The advancing price of both Manila and Sisal hemp, compels a change in quotations in harmony with present prices on raw material. Further advances are momentarily looked for.

	Pounds.	Cents.
Manila, 7-16 inch and larger.....	10	
"    ¾ inch.....	10½	
"    ¾ inch and 5-16.....	11	
Sisal, 7-16 inch and larger.....	8	
"    ¾ inch.....	8½	
"    ¾ inch and 5-16 inch.....	9	
Lath Yarn, medium and coarse.....	8	
Jute Rope, No. 1.....	6	
No. 2.....	5½	

**Linseed Oil:** The following advanced quotations are the latest announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....	66 cents per gallon.
In lots of 5 barrels or more.....	65 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Bolled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 85 cents per gallon.

## THE PHILADELPHIA TRADE.

The sad events of the last ten days have had some effect on trade, causing a slight falling off, which, however, seems to be only temporary, and is somewhat of a relief, as the holiday caused by the President's funeral has made it impossible to fill orders promptly. The demand for goods up to this time has continued, and there is every prospect that it will last.

The course of the stock market during the past week demonstrates the public confidence in the prosperity of the country, and the settlement of the steel strike insures employment to many thousands, thereby increasing the weekly roll of wages. It seems impossible that the iron and steel manufacturers can catch up in the near future with orders, as the suspension of work for about 6 weeks has thrown them so far behind hand that a continued scarcity of goods during the Fall seems inevitable, and the quotations coming in from day to day go far to prove there will be no early decline in prices. Collections continue good, and there seems to be an increasing number of dealers availing themselves of the cash discount—a welcome evidence of free circulation of money.

BIDDLE HARDWARE CO.

## THE BALTIMORE TRADE.

September is our busy month and extremely so this year, but whilst the demand for goods and our proportion of orders is all we could desire, our nerves are so shocked and sympathies so profound, occasioned by the awful national tragedy enacted at Buffalo, that our hearts are far from light and our labors are performed with great effort.

To-day, September 19th, the curtain falls on all that was mortal of the illustrious McKinley, whose name will ever live to illuminate the pages of history and whose noble life stands conspicuously as an ideal for all men.

His every utterance since the stroke of the assassin suggests an inspiration divine, and the deep sympathy expressed

by all nations seems as though his cruel fate was preordained for some good and wise purpose.

The trade seems very glad to learn that the steel strike is now off and hopes there will be no more agitation from this direction for a long time to come. Axes, ammunition, stove pipe and a few other items are scarce and difficult to obtain, and the demand this season on these goods will quite likely be far in excess of the supply. Collections continue good.

H. W. WEBB & SONS.

#### THE PITTSBURGH TRADE.

For the past ten days public attention has been centered on the awful tragedy resulting in the death of President McKinley. Good can, and often does, come from even the worst trials, and the example of a good man in the highest position our country can place him, will be emphasized by this event. His blameless private life, political honesty of purpose and noble expressions of our country's duty towards other nations, have made him one of the best loved men we have ever had in public life.

That he has a worthy successor of equal character, is a providential ruling for which we cannot be too thankful.

The termination of the strike among steel workers has come at last, for which there is sincere rejoicing in this vicinity. All mills are starting up full and there will be plenty to do all Winter to catch up with back orders.

We read with interest of business troubles in Germany among banks and manufacturers. "All the world's akin," and more so in the present than ever before. How far reaching these troubles may be it is hard to tell, but that they will reach our country within the next twelve months does not seem probable. All domestic conditions favor good business for months to come.

LOGAN-GREGG HARDWARE CO.

#### THE CHICAGO TRADE.

Our business the past few weeks has not only been keeping up wonderfully well, but our sales have largely exceeded those of last year at this time. To judge from reports we have had from our various salesmen, we have every reason to expect and enjoy a continuance of this during the remainder of the year. A great many staple articles are still very scarce and hard to get; although we are happy to say that we are in excellent shape to handle our largely increased business, and fill all orders with a reasonable degree of promptness. The market is very steady, and we look for no changes in prices of any consequence during the Fall season.

WELLS & NELLEGAR CO.

#### THE ST. PAUL TRADE.

Sitting where we can see a number of buildings draped in mourning because of our dead President, we feel that we

would like to be able to express ourselves in words that would be remembered for many years, because we have not only lost our President, but because the nation has lost a citizen beyond reproach. The people gave him the highest office in our land and he deserved it; as a patriot he was all any man could be, as a statesman he was as though inspired—our sympathy goes out to his good wife. Then, to think that his death is due to the act of a thing whose entire body and soul is not worth the smallest atom of Mr. McKinley's little finger, and whose death will not compensate the world for one second of our President's life, makes us think that to extinguish the life of not only this anarchist but the entire tribe, is the duty that lies before us.

But this does not affect our business, which continues good and will no doubt keep on whatever may occur. Prices are held firmly, some goods are scarce, but altogether the stocks here are well assorted, collections are beginning to come in nicely and we see no reason why the year will not close with a good record. C. W. HACKETT HARDWARE CO.

#### THE OMAHA TRADE.

Trade and conditions appear to be all that could be expected, and those who were anticipating some serious falling off on account of the shortage in crops, have been badly disappointed. While the present estimate of Nebraska's corn yield for this year is approximately 30 per cent. of the average, the fact that there was an exceptionally large wheat crop and corn is bringing considerably more than the average price will put things in much better shape than was expected, and farmers were never in better condition to stand a short crop without inconvenience than at present. Trade is fully up to the average, and there appears to be no good reasons why this satisfactory condition of affairs should not be maintained.

RECTOR & WILHELMY CO.

#### THE SAN FRANCISCO TRADE.

Hardware dealers, as a rule, were found this seventeenth day of September on the curbing in front of their several places of business overlooking professionals at work dressing their stores with black draperies, sombre-bordered flags and portraits of the martyr President, swathed in wrappings of mourning. William McKinley was greatly beloved by San Franciscans and his assassination has stunned this people to the quick.

President Frank Osborn, of the San Francisco and Oakland Retail Hardware Dealers' Association, remarked to the *Hardware* correspondent that Secretary H. C. Bennett, of Bennett Bros., not yet in office quite two months, ought to receive creditable mention for the good work he has already achieved. Within this short time he has personally rallied to membership in the association a new squad of dealers, numbering fifteen.

The trade is beginning to appreciate the fact, continued Mr. Osborn, that our new association is a good thing, not only as a promoter of family-like fellowship, but a promoter of stability of prices. It is a great cultivator of friendly feeling. Before our organization was, dealers passed each other by without recognition, but now it is different; members of the association now stop in passing and shake hands, consult about prices, and every other matter of common trade interest.

The story which has gained considerable circulation to the effect that William Ingram, a member of the Sacramento wholesale Hardware firm of Schaw, Ingram & Batcher, had mysteriously disappeared is emphatically denied by his business associates. When asked about the matter, William Schaw, the senior member, said:

"Mr. Ingram has not disappeared. He has gone away from the city for a rest and our firm is in regular communication with him. As long ago as February last I advised Mr. Ingram to take a vacation for six months, telling him that his

income during that time would not be affected, but he declined the offer. He has now gone away for a vacation, but will return shortly, and his position in the firm will remain inviolate. Mr. Ingram's dealings with the firm are perfectly satisfactory in all respects, and the best of feeling exists between us all. As to what personal troubles Mr. Ingram may have to cause him worry, I have not concerned myself, since I consider that it is not within my province, and I know absolutely nothing about that. Mr. Ingram is now off on a vacation such as I advised him to take months ago."—INDUSTRIAL PRESS ASSOCIATION.

### The Malcontent in Office Organization.

The employees of the auditor's department of the Republic Iron & Steel Co., at the Chicago offices, have a dinner every three months that has proved helpful in furthering co-operation and in maintaining interest and spirit in the work of that department. At the last of these dinners, says the *Age of Steel*, the paper given below was read by R. R. Shuman on "The Fate of the 'Knocker'." While the subject of this paper is not to be found in technical lexicons, the species is not an unfamiliar one, as described by Mr. Shuman. In the revolution that has gone on in the iron trade in the past two and a half years, the changes as they have affected operating and sales departments have had most attention in current trade literature. But in the accounting department the upheaval has been just as great. Some men have gone to the front. Others, prominent in the individual companies with which they have been long identified, have work of larger scope, perhaps, under the systems evolved by consolidation, but yet are subordinate to department heads. There may not in every case have been a graceful acceptance of these changes of the "fortune of war," and friction has resulted, perhaps to the detriment of the service, until the offending individuals have disappeared from the scene. Mr. Shuman's paper is evidently prompted by some of the experiences that have been a matter of record in all the large industrial companies. It takes so sensible a view of the situation and is so full of good philosophy, that we believe it is entitled to a wide reading.—(Ed.)

This plan of meeting at stated intervals for a feast of good fellowship is of greater value to your company and to yourselves individually than at first might seem evident. There is an old saying that "Familiarity breeds contempt." It is only half true, and like all half truths, contains a most dangerous falsehood. Familiarity one with another such as you gain at these dinners, breeds not contempt, but mutual confidence and general comradery.

Half of our enemies are creatures of our imaginations. Man has always feared or hated the things and the people that he did not understand. Sinister motives, for instance, have always been ascribed to people of foreign races or nations. The German hates the Frenchman because he does not understand him. The Frenchman hates the German because he does not know what a fine fellow he is. Both have warm hearts and right motives. Both love justice and hate meanness. Either would risk his life to save the life of the other in time of peril.

And this brings me to a topic which seems more and more important the more I study it. I refer to the "knocker." Now the "knocker" is not half as bad a fellow as you think he is, nor half as smart a fellow as *he* thinks he is. He is simply a weak, selfish man lacking in the sense of humor, who closes his eyes to the bright warm sunlight about him, and sees, or fancies he sees, evil motives in his associates. He will tell you that A has it in for him and is taking every opportunity to hurt him with the management, that B is telling scandalous lies about him, that C is a black-hearted villain who dares not be trusted, and that a whole list of others ought to be "fired" for one cause or another. He will complain to his trusting wife that his immediate superior is so jealous of his ability that he is "holding him down." He discourses solemnly on the blunderings of those high in authority. In short, he surrounds himself with a fitting host of imaginary enemies and he is kept so busy watching and check-mating their murderous moves that he neglects his work. His digestion soon becomes impaired and his sleep is troubled, and he moves about like a bird of ill omen, brooding and miserable.

My friends, the "knocker" is just as surely committing business suicide as the drunkard is committing moral and physical suicide. In the advanced stage of the knocking disease he, too, has a form of delirium tremens. His hand trembles, and he "sees things"—not pleasant things, either. And one day the climax is reached in the shape of a little note in his pay envelope to the effect that he has outlived his usefulness.

The "Knocker" takes himself too seriously. When he should be planning and scheming to advance the interests of the firm, he is planning and scheming to get more salary for himself. For him there is but one world and that world walks around under his own little hat.

Young men, you would all like to get higher salaries, wouldn't you? So would I; but I am not worth it yet. When I am worth it, I will get it, and so will you.

I will tell you how you can get a "raise" within six months; go down to the office to-morrow morning imagining that you

are a large stockholder in your company. Your first thought will be: "I wonder if we can't manage to make the next dividend a good deal larger than the last?" With this thought uppermost in your mind, you will forget that you are working *for* the officers of the company, and will feel instead that you are working *with* them. Your view point will be changed and you will begin to see things as they are. You will do your own work so that every stroke counts. You will think out plans for saving unnecessary labor in the office and at the mills. You will discover methods of saving money that now goes to waste; in short, you will try to solve the problem of increasing the efficiency of every branch of the work; and the new strength and zeal and confidence that you will gain will double your usefulness, and advance your position. Nothing could stop the progress of a company that had a solid phalanx of such men on its pay rolls, and every man who contributed to this success would profit by its growth.

"It is not in our stars but in ourselves that we are under-

lings." Nobody is trying to keep us down. Nobody can keep us down if we are worthy of rising. Why, gentlemen, the gravest problem that confronts the management of any large enterprise to-day is the difficulty in securing good men to fill responsible positions, regardless of the amount of money it may be necessary to offer. Every wise manager of every successful business would rather pay good wages to good men than poor wages to poor men.

A bookkeeper said to me the other day: "I made the mistake of my life when I learned to keep books. I was a good bookkeeper at 25 and was proud of it. I am a good bookkeeper now at 50 and am ashamed to tell anybody that I am a bookkeeper." Draftsmen talk the same way, and stenographers; and yet the railroad presidents and corporation presidents and the great captains of industry to-day were almost without exceptions bookkeepers or draftsmen or stenographers at some time in their careers. They rose because they were not satisfied with one talent when they had ac-

There is no kind of advertising so cheap as newspaper advertising and there is no kind that produces such immediate and satisfactory returns. The posting of bills, the use of street car signs and the mailing of circulars costs infinitely more per thousand for the same amount of advertising and it is seldom so effective.

## The Model Stove Truck is out of sight when under a stove.

quired it, but struck out boldly and labored early and late in the acquisition of others.

You can not hold a good man down unless he permits himself to be held down. I once heard the managers of a great mercantile institution discussing a list of employees with the view of choosing one who was competent to be given charge of an important department. There were six names. One was dismissed from the account as intemperate, a second was lazy, a third was lacking in judgment and the other three—all of them able men—were reluctantly passed because they were malcontents who did not seem to have the interest of the concern at heart.

A "knocker" is a malcontent, and he digs his own grave with his hammer. He is a traitor to his employer and not worthy of confidence, no matter what his ability. Don't "knock." Look on the bright side of people and of things. There is a lot of good in your "worst enemy"—if you think

you have one. Find the good in him and he will no longer be your enemy. On the other hand if there is a wrong to be righted, don't go at it with a gloomy little hammer, but do as Carrie Nation did; get a bright new ax and smash the day-lights out of it!

Kicking is a good thing sometimes, but when you kick, kick the evil itself; kick it squarely with all your might; don't waste time and energy by kicking about it. Andrew Carnegie, and after him Charles M. Schwab, rose from obscurity to greatness because they worked bravely and cheerily while others "knocked." They rose because they looked for the good in those about them and learned how to develop that good. They rose because their habit of looking for the good in men endeared them to their associates—superiors, equals and subordinates—so that every step up the ladder was made easier by the willing hands of all who knew them.

The "knocker" is purely selfish. Men like Carnegie and

# DIETZ

## MONARCH LANTERN

COX, ENG. N.Y.

## Dietz Monarch Lantern

In its general "make-up" and constructive features the "Monarch" closely resembles the widely known and as widely appreciated "Victor" Lantern. Like it, this Lantern has tinned-steel oil pot; the strong, simple, positive acting device for raising the globe—to light or trim—and to hold its burner immovably in position. The principal difference lies in the substitution of a two-piece round tube for the square tube used in the "Victor" frame—a detail of construction that adds much to its attractive appearance.

All Dietz Lanterns are absolutely safe from taking fire or exploding.

The "Monarch" Lantern gives a strong, steady, copious light, and has 5/8-in. burner and No. 0 globe.

## Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

Schwab and a thousand of others, not omitting your kindly auditor, advance their own interests by first advancing the interests of others. Once in a great while a man rises to an exalted station by trampling down other men; but his final downfall and day of reckoning are as sure as his rise, and infinitely swifter.

As I said at the outset, these dinners, and the good fellowship, and better acquaintance that result are of incalculable benefit to all concerned.

### Invention of Paper.

As told in an article published in *Harper's Monthly*, paper was first manufactured by the Chinese in the first century A. D. Up to that time they wrote on thin slips of bamboo, the instrument employed being not a pen or brush, but a pointed tool. The books of those ancient days were made by cutting the bamboo, after removing the bark, into thin sheets, which were strung together so as to compose a fairly compact, though clumsy, volume.

Later on it was found better to pound the bamboo to a paste in a mortar together with water, and the resulting substance was spread upon a flat surface to dry. This, in fact, was the first paper, in the modern acceptance of the term, though the Egyptian papyrus, made from a kind of reed that grew along the banks of the Nile, antedated it by several centuries. After a while the manufacture of this paper was improved by adding to it silk and other materials. The Tartars borrowed the art, substituting cotton, which was plentiful in their country, and from them the Arabs acquired it, using linen instead of cotton. It was in this way that paper-making was first brought into Europe, being introduced by the Arabs.

Hardwareman—"What was old Krankey kicking about?" Clerk—"He wanted ten pounds of nails. Said he'd pay for them and take them home himself. Wouldn't trust us to deliver them, he said." Hardwareman—"Surly old codger. I hope he'll sweat for it." Clerk—"Oh, I took care of that. I threw in an extra ten pounds and he never knew it."

### Relics of the Druids.

Discoveries of a highly interesting character have recently been made (says the *Sheffield Daily Telegraph*) by Mr. Abner Froggart, who is the owner of "Ringstones," a farm on the moors between Hayfield and Glossop. While cutting a trench for the purpose of draining his land Mr. Froggart came across a large stone chair, which is believed to have been used by the Druids, who had a temple here. A still more valuable find was made close by in the shape of a very fine stone Celtic ax, in an excellent state of preservation. Indeed, it is considered the finest specimen ever found in the Peak. Many visitors are being attracted to the spot, which is only a stone's throw from the famous "Robin Hood's Picking Rods."

### A Bald Statement.

"You said," asserted the irate customer, "that this tonic would make hair grow."

"I did," admitted the clerk.

The customer removed his hat and showed a head as smooth as a billiard ball.

"I've been using that tonic for three months," he said.

"Oh, that's all right," answered the clerk promptly. "You have no hair to grow. If you had the tonic would be all right. What more can you expect?"—*Chicago Post*.

### His One Success.

Miss Kulcher—Did you ever go in for literature, Mr. Gray? Mr. Gray—Well—er—not exactly, but once when I was at college I wrote a short story and got \$100 for it.

Miss Kulcher—Really? What was it?

Mr. Gray—"Dear Father: I'm broke. Please send me a hundred."

All barriers fall before work. Industry is invincible. There is no obstacle confronting life that hard work can not remove. This is the genius that conquers—the spirit of labor. Let a person be possessed by a passion for work, and circumstances will inevitably be too weak to keep him down. Nothing is denied to industry.

**Helena, Montana, Jan. 29, 1901.**  
Give good satisfaction.  
ADAMS HEATING-PLUMBING CO.

**Spokane, Wash., Nov. 22, 1900.**  
Found it an excellent light in every respect.  
DOERR, MITCHELL & CO.

**Buffalo, N. Dakota, Dec. 8, 1900.**  
I am much pleased with them.  
WILLIAM STORY.

**Mound City, S. Dakota, Dec. 8, 1900.**  
Like them very much.  
C. E. ECKERT.

**Caldwell, Idaho, Nov. 8, 1900.**  
I am so well pleased with them, and they give such a fine, even light, that I have traded that wish to buy them.  
J. H. CALLENDER.

**Portland, Ore., Jan. 21, 1901.**  
We believe this present year will show quite an increase in business.  
M. SELLER & CO.

**Douglas, Wyoming, May 17, 1901.**  
They have all given excellent satisfaction. Parties here have tried other kinds of lamps, but they soon played out.  
H. S. DATESMAN.

**Lowell, Nevada, June 1, 1901.**  
They work perfect, and, although 40 miles from railroad, we have as much or more light to the square inch as a first class city.  
NEVADA COPPER CO.

**Central City, Neb., Oct. 18, 1900.**  
All of your lamps in this place are doing splendid work.  
A. H. EATON.

**Needles, Cal., May 20, 1901.**  
In every case the purchasers claim they give better satisfaction than any lamp they have ever used.  
MONAGHAN & MURPHY.

**Salt Lake City, Utah, Feb. 25, 1901.**  
The lamps which we have sent out have given universal satisfaction.  
THE SALT LAKE HARDWARE CO.

**Osage, Ia., Feb. 13, 1901.**  
During the last three months I have sold forty-three of your lamps. They really sell themselves.  
W. A. SWAIN.

**Elgin, New Mexico, Jan. 10, 1901.**  
I have never used a lamp that gives such perfect satisfaction.  
J. F. MEERS.

**Denver, Col., Feb. 8, 1901.**  
The majority of our sales now are to parties who are throwing out the inferior lamps.  
FORD GAS REGULATOR CO.

**Show Low, Arizona, Nov. 15, 1900.**  
The lamp is giving good satisfaction, and I am exhibiting it to the public here.  
H. HUNING.

**Albion, Ill., Jan. 16, 1901.**  
I have the best light in town. Every one who comes in my store praises them.  
FRANK DALBY.

**Wetworth, Wis., July 23, 1900.**  
I am using your lamps and want the agency.  
P. J. PERRING.

**Flora, Ind., Dec. 12, 1900.**  
We find them equal to the gasolene plant that cost five times more.  
HANNA, BYERLY & CO.

**Harrison, Minn., Jan. 14, 1901.**  
Every one who sees the lamp thinks it is the proper thing, and don't want anything else.  
CHARLES MASTERS.

**York, Pa., Feb. 26, 1901.**  
All you claim for them. They certainly are a great saving institution and ready sellers.  
JOSEPH HOCHBERGER.

**Sarasburg, O., Feb. 28, 1901.**  
We consider your lamp the best on the market, and we have tried a good many of them.  
THE GARVER BROS. CO.

**Three Rivers, Mich., Feb. 26, 1901.**  
The more I use the lamps the better I like them. Wouldn't take double the price paid and go without.  
C. A. WOOD.

**Rushford, N. Y., Dec. 18, 1900.**  
They give the best light with the least trouble of any now on the market.  
G. H. DAMON.

**Jericho Center, Vt., Jan. 18, 1901.**  
We like the lamps first rate.  
JORDAN BROTHERS.

**Rochester, N. H., March 26, 1901.**  
It attracts the attention of everyone, and we can sell a large number of them.  
EMERSON & CO.

**Showegan, Me., Feb. 18, 1901.**  
Have the best lighted store in town.  
FRED. H. WING.

**Chicopee, Mass., March 26, 1901.**  
The lamp sent us has been well tested by us and has been found quite satisfactory.

## HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### Incorporations, New Stores, etc.

Anadarko, Kan.—Frank J. Callahan.

Aplington, Ia.—J. P. Arends.

Augusta, Ga.—Builders' Supply Co. has been incorporated, with a capital stock of \$5,000 and the privilege of increasing it to \$20,000 at any time. Messrs. W. M. Nixon, T. C. Bligh, C. E. Clarke and H. P. Shewmake are the incorporators, and the company is authorized to do a wholesale or retail business in builders' supplies, Hardware, etc.

Bentonville, Ark.—The J. G. McAndrew Hardware Co. has been formed into a stock company with the following gentlemen as stockholders: J. G. McAndrew, F. G. Lindsey, Don Hagler and Marion Douglas, and will be known as the McAndrew Hardware Co.

Black Hawk, Colo.—Clark Hardware Co. has been incorporated with a capital of \$25,000; Eugene E. Clark, Charles T. Hale, Stephen T. Hale, incorporators.

Farming, Minn.—Willenbring & Bock have opened a Hardware store and the stock has already been received.

Fayetteville, N. C.—The Huske Hardware Co., with Messrs. R. R. Huske, Roy M. McDuffie and Leighton Huske as incorporators, has been chartered. The maximum capital is \$50,000 and the company begins with \$10,000. The company will conduct a general merchandise and Hardware business, manufacturing and repairing goods in its line, and in general carrying on a mercantile business in its largest sense.

Hyde Park, Mass.—J. E. Farrell, Kennedy Block.

Presque Isle, Me.—The Washburn Hardware Co. has been organized for the purpose of buying and selling all kinds of merchandise, with \$5,000 capital stock. The officers are: President, James L. Wellington, of Presque Isle, Me.; treasurer, Harry E. Wellington, of Presque Isle, Me.

St. John, Kan.—The Gray Hardware and Implement Co. has been incorporated. Capital, \$1,000.

Springfield, O.—Hugel & Heiserman, 19 East Main Street.

### Changes and Improvements.

Bloomington, Ill.—J. V. Milner Hardware Co.; capital stock increased from \$10,000 to \$15,000.

Boothbay Harbor, Me.—Newbert Pierce has leased the basement of Lewis & Duntton's rear store and fitted it up for his builders' Hardware, doors, sash and blind business and has moved into the same.

Bowling Green, Ky.—There has been a change made in the Hardware firm of Miller & Claypool. Mr. Miller has sold out his interest in the business to his partner, W. S. Claypool, who will continue the business at the present stand.

Boydton, Va.—Mrs. Belle Park, widow of C. D. Park, has sold an interest in the Hardware business, owned and managed by her late husband, to her sister, Miss Humrickhouse. The business will be known as the Park Hardware Co., and will be managed by J. J. Humrickhouse.

Burnt Hills, N. Y.—F. J. Hall & Co. have purchased the Hardware, stock, fixtures, etc., of F. C. Hall.

Cincinnati, O.—The Pickering Hardware Co., of Fifth and Main Streets, have purchased the four-story brick building adjoining on the south, and have established the sporting goods department there.

Danbury, Ia.—W. C. Cameron, the Hardware and implement dealer, has had a large force of men and teams at work excavating the cellar for his new store building, which he is about to erect. The building is to be 25 by 100 feet and two stories high. The first seventy feet is to be of brick and the other thirty of corrugated iron. The store will be equipped with all the modern conveniences.

Des Moines, Ia.—Manager E. A. Faeth, of the Des Moines Iron Co., has purchased the heavy Hardware stock of the Seeberger Hardware Co. and will remove it to the house, 117 Court Avenue. The wagon stock department was also purchased from the same firm and will be used by Mr. Faeth who is expanding his business. Recently the Des Moines Iron Co. secured control of large warerooms at 219 Second Street, and it is the intention to fill these rooms with the stock purchased from the Seeberger stock and from other sources. The present location of the iron company at 117 Court Avenue, may be enlarged to care for the increasing stock.

Franklin, N. H.—C. H. Smith has sold his interest in Sawyer Block Hardware store to his partner, J. Edward Beck, who will conduct the business.

Gorham, N. Y.—M. D. Crosier, formerly of this place, has purchased his partner's interest in the Hardware business of Dixon & Crosier at Phelps and continues to conduct the same.

Greene, N. Y.—The Hardware firm heretofore known as N. D. Martin, has been purchased by L. G. and F. S. Martin and will henceforth be known as Martin Bros.

Holcomb, Ill.—D. H. Lamont is building an addition to the Dentler store building and will move his stock of Hardware as soon as it is completed.

Houston, Tex.—The J. S. Dunlay Hardware Co., 410 and 412 Travis Street, J. S. Dunlay, proprietor, has sold out its entire business to Bernard Repsdorph, proprietor of the Repsdorph Tent and Awning Co., of this city, Mr. Repsdorph taking immediate possession.

Little Rock, Ark.—Pfeifer & Simpson, Hardware merchants, dissolve partnership, Phil Pfeifer selling his interest to E. C. Newton.

Lanark, Ill.—W. A. McKibben, of Freeport, has purchased the Lanark Hardware store.

Malone, N. Y.—George S. Howard has disposed of his interest in the Hardware business of Howard & Short to Charles W. Wilding and his partner, Wallace C. Short, and the new firm has organized under the firm name of Short & Wilding.

McMinnville, Tenn.—The firm of Morford & Rogers, Hardware dealers at this place, has been dissolved by mutual consent, James H. Morford retiring and Charles W. Rogers succeeding to the business.

Maryville, Mo.—The Hardware firm of J. E. & W. H. Hudson has sold out to George Shoptaugh and John Thornhill.

Morrisville, Vt.—D. L. Sanders has purchased the C. A. Gile interest in the Hardware firm of Gile & Churchill.

Monroe, N. Y.—The Smith Brothers, of Middletown, have taken possession of the Hardware store recently purchased of John D. Bouton.

New Britain, Conn.—The Landers, Frary & Clark Co. will erect a new factory building for the purpose of increasing their facilities in the wood handle department. The new building will be 30 x 35 feet and will be 15 feet high. The building will be of brick.

Sanbornton, N. H.—C. P. Brown has bought out J. T. Bugbee, the grocer and Hardware dealer in Lakeport.

Seguin, Tex.—George Suchart has purchased an interest in the Seguin Hardware Co., and has taken the position of manager in that company.

Sheboygan, Wis.—W. H. Sprangers, a Hardware dealer on South Twelfth Street, has disposed of his real estate and stock of goods to E. H. Williams, of Ripon, for \$20,500.

Superior, Wis.—G. A. Stensrud has purchased the interest of his brother, C. O. Stensrud, in the Hardware business at 305 West 5th Street, which has been known as the Stensrud Hardware Co., and will hereafter conduct the business in his own name.

### Embarrassments.

Frankfort, Ind.—Elmer E. Lewis, a Hardware and implement merchant, has filed a petition in bankruptcy. Liabilities, \$5,989.96; assets, \$3,654.97.

Lime Springs, Ia.—J. F. Lindeman & Co., implement dealers of this place, have failed and their liabilities will exceed \$40,000 with assets not over \$6,000 at the outside.

Mechanicsburg, O.—Creditors of Elizabeth Stuart and F. Pearl Legge, doing business as Stuart & Legge, Hardware and implement dealers in this city, have filed a plea to force them into involuntary bankruptcy in the United States Court. The firm became insolvent June last and a receiver was appointed. The plea asks that they be adjudged bankrupts and that a receiver be appointed to take charge of the property.

**Willoughby, Ohio.**

## HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

### New Incorporations, Etc.

Decatur, Ill.—Decatur Refrigerator and Mfg. Co. has been incorporated. Capital, \$30,000. Incorporators, Robert Farles, P. R. Osborne and John Schweibold.

Dover, Del.—Articles of incorporation have been filed at Dover, Del., for the National Steel Refining Co., of Philadelphia, capital, \$1,500,000. The company is organized for the purpose of manufacturing a high grade of tool steel for punches, drills, milling cutters, reamers, taps, lathe tools, chisels, etc. Works have been secured at Carnegie, near Pittsburgh.

Doylestown, O.—The Seiberling & Miller Co., capital stock, \$100,000, has been incorporated by J. H. Seiberling, S. H. Miller, W. A. Huffman, A. E. Stepfield and L. K. Franks. They will make agricultural implements.

Gasport, N. Y.—A concern known as the Friend Mfg. Co. has just been incorporated. Its capital is given as \$150,000, and it is proposed to engage in the manufacture of pumps. The directors of the new company are George V. Hull, W. N. Hull and A. B. Hull, of Gasport.

Syracuse, N. Y.—The Brennan Mfg. Co., of this city, is planning to build a factory for the manufacture of gasoline motors in Fulton. Larger quarters than the present ones are needed. The company is incorporated with a capital of \$10,000 and employs from ten to twenty-five skilled hands, according to the season.

Winooski, Vt.—The new Porter screen shops, replacing those burned a short time ago, are fast nearing completion.

Kalamazoo, Mich.—The Bremer Machine and Tool Co. is the name of a new incorporation in this city. The concern was formerly the Godfrey J. Bremer Machine Co. Detroit capital is largely interested, and the plant will either be enlarged here or removed to Detroit, where the main offices will be in any event. The officers of the new company are: President, C. J. O'Hara, Detroit; vice-president, Frederick K. Wormer, Detroit; treasurer, C. C. Wormer, Detroit; secretary, F. G. Bremer; superintendent, G. J. Bremer. The company will manufacture a standard line of punches, presses and shears, milling machines, horizontal forging presses, hand and power presses, foot and power hammers, brass goods and the Bremer check valve. Inside of six months they expect to be employing at least 40 hands.

New York, N. Y.—New York Agricultural Co. has been incorporated to manufacture agricultural implements; capital, \$24,000. Directors, S. A. Trench, Yonkers;

C. S. Trench, Orange, N. J.; D. G. Trench, Chicago.

Toledo, O.—Allen Mfg. Co. has been incorporated to manufacture tools and specialties. Capital stock, \$10,000.

### Changes and Improvements.

Albany, N. Y.—Thomas D. Adams, as attorney for the New York Knife and Razor Co., has filed a certificate granted by Justice Warren Hooker, of the Supreme Court, permitting the company to change its name to the New York Knife Co.

Buffalo, N. Y.—The Ontario Knife Co. have begun the erection of a large building and engine house on the former site of the casket factory burned last Spring. The new factory expects to employ a large number of hands and greatly increase its business.

Cleveland, O.—Not long ago the Grant Ball & Machine Tool Co. removed from Cleveland to Franklin, Pa., where it has established itself on a still larger basis. Its large building on Clarkwood Avenue did not long remain empty. The Cleveland Cap Screw Co., recently organized with a capital stock of \$250,000, has purchased the old plant and is giving it a complete overhauling preparatory to moving in. This new company, which intends to manufacture a special line of cap screws, is backed by well known Cleveland business men, who have ample experience in this line of work. The president, D. J. Kurtz, was for a quarter of a century connected with the William Bingham Co. Samuel M. Mathews, the secretary, was also with the Bingham company for a dozen years.

Cleveland, O.—The National Screw & Tack Co. is erecting a large brick addition to its Stanton Street plant. The addition is four stories high and 150 by 80 feet in size. An electric power plant will be installed in one end of the building.

Chicago, Ill.—The McCormick Harvester Machine Co. have taken out a permit to erect a five-story brick factory building at Leavitt Street and the river. It will be 120x60 feet and will cost \$36,000.

Indianapolis, Ind.—The new building of the McCormick Harvesting Machine Co., being constructed at Capitol Avenue and Mobile Street, will be one of the handsomest and most complete business structures in Indianapolis. It will have a frontage of seventy feet on Capitol Avenue, one hundred and twenty feet on Mobile Street, and be four stories high. The first story will be of cut stone and the balance of gold mottled Roman pressed brick. The offices, which will occupy nearly the whole of the first floor, will be finished in quarter-sawn oak, with plate and chipped glass. There will be large safety vaults in the basement and on the office floor. The second floor of the building will be devoted to the repair and extra department and the remaining floors to stock storage. The building will

be lighted by electricity, heated by steam and supplied with perfect plumbing, hot and cold water throughout. The company now occupy their new quarters.

Mansfield, O.—The Ditch Adjustable Sieve Works on North Diamond Street, damaged recently by fire, has resumed operations, the damage done by the fire having been adjusted and the necessary repairs made.

Westfield, Mass.—Westfield is to have another new industry in the Planet Mfg. Co., of Springfield, which is to move into new quarters on North Elm Street at once.

West Superior, Wis.—The Duplex Mfg. Co., manufacturers of wind mills, will double their capacity and the size of the plant in this city. The company is figuring on doubling the number of men that are at present given employment in the plant, and in order to handle the increased business the South Superior Stove Works has been purchased by the company.

Worcester, Mass.—The Parker Wire Goods Co. has hired about 5,000 feet of room in the building at the corner of Plymouth and Assonet Streets and will start work with about 20 hands. Arthur H. Parker is the manager.

### Recent Fires.

Brooklyn, N. Y.—The five-story brick factory building, 123 to 129 Middleton Street, Williamsburg, has been partially destroyed by fire and the contents seriously damaged. In the first and second floors, occupied by the Robert Braun Mfg. Co., makers of dies and tools, the loss amounts to about \$4,000.

Dayton, O.—The mounting department of the Gem City Stove Works, situated along the Panhandle Railroad tracks in East Dayton, together with another part of the building, both covering a large tract of ground, caught fire recently and burned to the ground. The loss is estimated at \$50,000, partially covered by insurance.

Frankfort, Ind.—Fire broke out recently in the big handle factory of Wines & Kramer. A high wind blowing at the time fanned the fire into a great conflagration, and in less than five minutes after it was discovered, the loss to stock and machinery was complete. The total loss is estimated at \$12,000.

# Mince=pie time coming

**Are you ready?**

You should put in a full stock of Sargent's Gem Food Choppers because the housekeepers will want them as soon as there is a demand for mince pies. Every season has its calls for the Gem, but within the next few months they will sell fast.

**We will help you sell the Gem.**

By furnishing booklets and other printed matter for you to distribute among the housekeepers of your neighborhood so that they will know you sell the Gem. By supplying you with carefully prepared advertisements, electrotyped, with your name and address, and ready for use in your local papers. These advertisements will constantly remind the women who have received the booklets that they need the Gem.

By including with the choppers attractive show cards to hang about the store—a further reminder that will be seen by all who visit your store.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

### New Companies, Agencies, Etc.

Alexandria, La.—Rollins & Canoe.

Cleveland, O.—The Athleta Cycle Co. has been incorporated with a capital stock of \$125,000.

Coffeyville, Kan.—J. C. Pinger, re-opening.

Elmira, N. Y.—John N. Willys, Wesley O. Crew, George T. Wolcott, Ralph D. Webster and Charles S. Lattin are the directors of a new Elmira corporation to be known as the Elmira Arms Co. The incorporation papers read that the concern is capitalized at \$20,000 and is for a term of twenty-five years.

Greenville, Ala.—F. M. West, repairing.

Indianapolis, Ind.—The American Bicycle Co., conforming with the foreign corporation law, have filed articles of incorporation. Capital stock, \$80,000,000, of which \$500,000 is invested in this State and city, with Charles J. Pepper as agent.

Jersey City, N. J.—The Barwest Coaster Brake Co. has been incorporated, with principal office, Montgomery and Washington Streets, Jersey City. Objects, manufacture automatic coaster brakes, etc.; capital, \$100,000. Incorporators, Franklin F. Weston, Perley M. Berry, Francis G. Coates, F. P. McManus and J. M. Enright.

Lyme, Conn.—H. P. Hilliar, Cone Block.

Miami, Fla.—Clark & Carroll.

Newark, N. J.—The American Rubber Co., with an authorized capital of \$1,000,000, have filed articles of incorporation here. The object of the company is to purchase and own patents for improvements in rubber tires, rims, wheels and hubs for vehicles, and to manufacture them. The incorporators are G. H. Huntington, L. S. McGiehan and John W. Cox.

New York, N. Y.—Consumers' New York Rubber Tire Co. has been incorporated; capital, \$60,000. Directors, William H. Seach, John W. Horner, Alfred D. Moulton, Hooper C. Barrett and Andrew C. Farnsworth.

Paw Paw, Mich.—Alvin Norwood.

Portsmouth, N. H.—W. F. and C. E. Woods.

San Jacinto, Cal.—Pierre Baker, re-opening.

Swanton, Vt.—What may become an important industry here is the manufacture of bicycles. Mayher & Wild, bicycle dealers, have begun manufacturing on a small scale and have gotten out a very good wheel which they call the "Peerless."

Wilmington, Del.—Washington (D. C.) Auto-Vehicle Co. has been incorporated to manufacture automobiles, motorcycles and parts. Officers: J. Sprigg Poole, president; T. Janney Brown, secretary-treasurer. Cap-

J. B. Chamberlain, vice-president; T. Janney Brown, secretary-treasurer. Capital stock, \$1,000,000.

### Changes and Improvements.

Bayonne, N. J.—David Horsey, formerly of 560 Boulevard, has removed to Avenue C, between East Twenty-second and Twenty-third Streets.

Black River Falls, Wis.—W. F. Crombie succeeds Benson & Gunderson.

Buffalo, N. Y.—Annie Krumholz succeeds Finn & Chretien, 625 Main Street.

Cleveland, O.—W. E. Jones has discontinued.

Dunkirk, N. Y.—Lake City Cycle Works have removed to 414 Central Avenue.

Elmwood, Conn.—Walter Ziegler has disposed of his interest in the bicycle business in which he has been engaged recently, to his partner.

Fair Haven, Conn.—The Norton Hardware Co. has sold out its joint bicycle emporium to Walter I. Smith, who will have the distinction of being the sole man to whom Fair Haven people will have to go in the future for wheels.

Glens Falls, N. Y.—Miller Bros. succeed Empire Cycle and Auto Co.

Greenville, Pa.—Bert Wheeler has sold out to Ernest Taylor and Clifford Jinks.

Hartford, Conn.—The American Bicycle Co. has announced that its Monarch sales department has been combined with the Columbia sales department of this city and that hereafter the Monarch business, which includes the sales of the Monarch and Barnes bicycles, will be from the Hartford office. The transfer of so large a section of the company's business to this city will add much to the work of the Columbia sales department.

Keene, N. H.—Wilkins Toy Co. succeeds A. J. Sweeney.

Lawrence, Kan.—A. Boncourt succeeds Simpson & Boncourt, D. B. Simpson retiring.

Leavenworth, Kan.—T. T. Reyburn has added a line of sporting goods to his extensive Hardware business.

Lynn, Mass.—Walter Porter has removed to 29 Munroe Street.

Pulaski, Va.—J. W. Nowlin has removed to Washington Avenue.

Malden, Mass.—William Stevens has purchased business of C. W. Coomes, Commercial Street.

Massena, N. Y.—Ira J. Raymond is succeeded by Ira J. Raymond & Co., E. H. Hitchcock having purchased a half interest.

Mattapan, Mass.—Walter Thompson has sold out to Barden Cycle Co.

Natick, Mass.—The business of W. D. Parlin has been converted into a stock company, with a capital stock of \$40,000, and will hereafter be known as the W. D. Parlin Hardware Co.; W. D. Parlin is president and Lloyd Brown treasurer.

New Haven, Conn.—The Veru Bicycle and Rubber Co., of New Haven, has reduced its stock from \$15,000 to \$8,000.

Newport, Vt.—Martin White succeeds Will Hight.

Osakis, Minn.—Fred Klatt succeeds Claude Curtis.

Pasadena, Cal.—E. R. Braley, building addition to store.

Peoria, Ill.—Dillo Schupp has removed from 428 Fulton Street to 506 South Adams Street.

Pittsburg, Kan.—The Pennsylvania & Kansas Powder Co. has purchased a tract of land at Kirkwood, three miles south of this city, on which it will immediately commence the erection of an extensive powder manufacturing plant. It will consist of three large stone buildings and will be equipped with the best and most modern machinery. The works will employ about 300 men.

Toledo, O.—A. E. Schaff, of New York, general manager of the automobile department of the American Bicycle Co., was in this city recently and completed arrangements for the removal of the general headquarters of the automobile department to this city. The change will be made in a short time, and thirty clerks will accompany Mr. Schaff. The present force here of 700 men, turning out thirty automobiles a week, will be increased to turn out twelve a day.

West Chicago, Ill.—Clarence Ferry succeeds O. S. Decker.

Westfield, N. J.—C. G. Embleton has purchased business of J. Scriven.

Windsor Locks, Conn.—W. J. Miller succeeds F. L. Harvery.

Winona, Minn.—The Wood Rim Co. has removed to La Crosse, Wis., where better shipping facilities are had.

### Embarrassments.

Pittsburgh, Pa.—In the United States district court petitions in bankruptcy have been filed by Frank T. Hoover, an East End automobile and bicycle dealer, giving liabilities as \$5,620.49 and assets of \$1,000.

### Recent Fires.

Ansonia, Conn.—Lombardi's bicycle store, loss, \$3,000; insured for \$2,000.

Danville, Ind.—Newsome Bros., loss slight.

New Britain, Conn.—The repair bicycle shop of Owen Barnard, at the corner of East Main Street and Hartford Avenue, was completely gutted by fire recently. The damages will amount to about \$200.

Superior, Wis.—A. Hunter, 294 Fifth Street, total loss; insured for \$500.

### Miscellaneous.

Hagerstown, Md.—The Crawford Mfg. Co., a branch of the American Bicycle Co., have elected Edward M. Mealey, president; Harry S. Wise, secretary; L. B. Whympier, C. W. Dickerson, E. E. Hinsman, Robert S. Crawford and George Pope, directors.

## "Bright & Newsy."

Biddle Hardware Co., Philadelphia,  
Pa. [*General Hardware and Bicy-  
cles*]: In season and out, we have  
claimed that the Hardware trade was  
the proper medium for the disposal  
of bicycles and bicycle sundries  
throughout the country, and our opin-  
ion on this point is so well known,  
that it does not seem as if we could  
strengthen it materially by saying it  
again. Of course large cities may be  
able to support a few exclusive bicy-  
cle men, but in the majority of towns  
and cities throughout the country  
the man must have other business  
in order to make it pay. We ap-  
preciate the fact that from the first  
HARDWARE has held the same views,  
and we think they have been fully  
justified by the trend of events.  
HARDWARE is always welcome in our  
office, and its bright and newsy col-  
umns are often a relief amid the cares  
of business.

## Columbian 1000-Shot Air Rifle.

Patented  
Oct.  
24, 1893.

CHAMPION  
MODEL.

This Air Rifle possesses advantages over all the Air Rifles now  
on the market. The materials used in its construction are  
the best. The appearance and workmanship is far ahead of  
any other Air Rifle made. It has an adjustable sight it shoots stronger  
and more accurate, less liable than any other to get out of order, all  
parts are interchangeable. We think we have the right to claim this as  
the "Champion" of all Air Rifles. List, per doz., Enameled, \$30.00; Full Nickel, \$42.00.

### Polygon Conductor Pipes Won't Burst.

The twist in the corrugation checks the sudden fall of ice and water, thus protecting the joints. It stands hard knocks because it is corrugated. Again, it is much handsomer than plain pipe. Made in copper and galvanized iron.  
Catalogue and information free.

Address Dept. H,  
THE  
**AMERICAN STEEL ROOFING CO.**  
Middletown, O.
